# Chapter 1

## Hierarchical Index

### 1.1 Class Hierarchy

This inheritance list is sorted roughly, but not completely, alphabetically:

CombustionInputs . . . . .	24
Controller . . . . .	25
DieselInputs . . . . .	59
ElectricalLoad . . . . .	63
Emissions . . . . .	68
HydroInputs . . . . .	89
Interpolator . . . . .	91
InterpolatorStruct1D . . . . .	105
InterpolatorStruct2D . . . . .	106
LilonInputs . . . . .	128
Model . . . . .	133
ModelInputs . . . . .	152
NoncombustionInputs . . . . .	161
Production . . . . .	162
Combustion . . . . .	9
Diesel . . . . .	45
Noncombustion . . . . .	153
Hydro . . . . .	70
Renewable . . . . .	180
Solar . . . . .	203
Tidal . . . . .	229
Wave . . . . .	244
Wind . . . . .	261
ProductionInputs . . . . .	178
RenewableInputs . . . . .	188
Resources . . . . .	189
SolarInputs . . . . .	212
Storage . . . . .	214
Lilon . . . . .	109
StorageInputs . . . . .	227
TidalInputs . . . . .	242
WaveInputs . . . . .	258
WindInputs . . . . .	274

## Chapter 2

# Class Index

### 2.1 Class List

Here are the classes, structs, unions and interfaces with brief descriptions:

<a href="#">Combustion</a>	The root of the <a href="#">Combustion</a> branch of the <a href="#">Production</a> hierarchy. This branch contains derived classes which model the production of energy by way of combustibles . . . . .	9
<a href="#">CombustionInputs</a>	A structure which bundles the necessary inputs for the <a href="#">Combustion</a> constructor. Provides default values for every necessary input. Note that this structure encapsulates <a href="#">ProductionInputs</a> . . .	24
<a href="#">Controller</a>	A class which contains a various dispatch control logic. Intended to serve as a component class of <a href="#">Model</a> . . . . .	25
<a href="#">Diesel</a>	A derived class of the <a href="#">Combustion</a> branch of <a href="#">Production</a> which models production using a diesel generator . . . . .	45
<a href="#">DieselInputs</a>	A structure which bundles the necessary inputs for the <a href="#">Diesel</a> constructor. Provides default values for every necessary input. Note that this structure encapsulates <a href="#">CombustionInputs</a> . . .	59
<a href="#">ElectricalLoad</a>	A class which contains time and electrical load data. Intended to serve as a component class of <a href="#">Model</a> . . . . .	63
<a href="#">Emissions</a>	A structure which bundles the emitted masses of various emissions chemistries . . . . .	68
<a href="#">Hydro</a>	A derived class of the <a href="#">Noncombustion</a> branch of <a href="#">Production</a> which models production using a hydroelectric asset (either with reservoir or not) . . . . .	70
<a href="#">HydroInputs</a>	A structure which bundles the necessary inputs for the <a href="#">Hydro</a> constructor. Provides default values for every necessary input. Note that this structure encapsulates <a href="#">NoncombustionInputs</a> . . . . .	89
<a href="#">Interpolator</a>	A class which contains interpolation data and functionality. Intended to serve as a component of the <a href="#">Production</a> and <a href="#">Storage</a> hierarchies . . . . .	91
<a href="#">InterpolatorStruct1D</a>	A struct which holds two parallel vectors for use in 1D interpolation . . . . .	105
<a href="#">InterpolatorStruct2D</a>	A struct which holds two parallel vectors and a matrix for use in 2D interpolation . . . . .	106
<a href="#">Lilon</a>	A derived class of <a href="#">Storage</a> which models energy storage by way of lithium-ion batteries . . . .	109

<a href="#">LilonInputs</a>	A structure which bundles the necessary inputs for the <a href="#">Lilon</a> constructor. Provides default values for every necessary input. Note that this structure encapsulates <a href="#">StorageInputs</a> . . . . .	128
<a href="#">Model</a>	A container class which forms the centre of PGMcpp. The <a href="#">Model</a> class is intended to serve as the primary user interface with the functionality of PGMcpp, and as such it contains all other classes . . . . .	133
<a href="#">ModelInputs</a>	A structure which bundles the necessary inputs for the <a href="#">Model</a> constructor. Provides default values for every necessary input (except <code>path_2_electrical_load_time_series</code> , for which a valid input must be provided) . . . . .	152
<a href="#">Noncombustion</a>	The root of the <a href="#">Noncombustion</a> branch of the <a href="#">Production</a> hierarchy. This branch contains derived classes which model controllable production which is not based on combustion . . . . .	153
<a href="#">NoncombustionInputs</a>	A structure which bundles the necessary inputs for the <a href="#">Noncombustion</a> constructor. Provides default values for every necessary input. Note that this structure encapsulates <a href="#">ProductionInputs</a> . . . . .	161
<a href="#">Production</a>	The base class of the <a href="#">Production</a> hierarchy. This hierarchy contains derived classes which model the production of energy, be it renewable or otherwise . . . . .	162
<a href="#">ProductionInputs</a>	A structure which bundles the necessary inputs for the <a href="#">Production</a> constructor. Provides default values for every necessary input . . . . .	178
<a href="#">Renewable</a>	The root of the <a href="#">Renewable</a> branch of the <a href="#">Production</a> hierarchy. This branch contains derived classes which model the renewable production of energy . . . . .	180
<a href="#">RenewableInputs</a>	A structure which bundles the necessary inputs for the <a href="#">Renewable</a> constructor. Provides default values for every necessary input. Note that this structure encapsulates <a href="#">ProductionInputs</a> . . . . .	188
<a href="#">Resources</a>	A class which contains renewable resource data. Intended to serve as a component class of <a href="#">Model</a> . . . . .	189
<a href="#">Solar</a>	A derived class of the <a href="#">Renewable</a> branch of <a href="#">Production</a> which models solar production . . . . .	203
<a href="#">SolarInputs</a>	A structure which bundles the necessary inputs for the <a href="#">Solar</a> constructor. Provides default values for every necessary input. Note that this structure encapsulates <a href="#">RenewableInputs</a> . . . . .	212
<a href="#">Storage</a>	The base class of the <a href="#">Storage</a> hierarchy. This hierarchy contains derived classes which model the storage of energy . . . . .	214
<a href="#">StorageInputs</a>	A structure which bundles the necessary inputs for the <a href="#">Storage</a> constructor. Provides default values for every necessary input . . . . .	227
<a href="#">Tidal</a>	A derived class of the <a href="#">Renewable</a> branch of <a href="#">Production</a> which models tidal production . . . . .	229
<a href="#">TidalInputs</a>	A structure which bundles the necessary inputs for the <a href="#">Tidal</a> constructor. Provides default values for every necessary input. Note that this structure encapsulates <a href="#">RenewableInputs</a> . . . . .	242
<a href="#">Wave</a>	A derived class of the <a href="#">Renewable</a> branch of <a href="#">Production</a> which models wave production . . . . .	244
<a href="#">WaveInputs</a>	A structure which bundles the necessary inputs for the <a href="#">Wave</a> constructor. Provides default values for every necessary input. Note that this structure encapsulates <a href="#">RenewableInputs</a> . . . . .	258
<a href="#">Wind</a>	A derived class of the <a href="#">Renewable</a> branch of <a href="#">Production</a> which models wind production . . . . .	261
<a href="#">WindInputs</a>	A structure which bundles the necessary inputs for the <a href="#">Wind</a> constructor. Provides default values for every necessary input. Note that this structure encapsulates <a href="#">RenewableInputs</a> . . . . .	274

### 3.1 File List

Here is a list of all files with brief descriptions:

header/ <a href="#">Controller.h</a>	
Header file for the <a href="#">Controller</a> class . . . . .	277
header/ <a href="#">doxygen_cite.h</a>	
Header file which simply cites the doxygen tool . . . . .	278
header/ <a href="#">ElectricalLoad.h</a>	
Header file for the <a href="#">ElectricalLoad</a> class . . . . .	279
header/ <a href="#">Interpolator.h</a>	
Header file for the <a href="#">Interpolator</a> class . . . . .	279
header/ <a href="#">Model.h</a>	
Header file for the <a href="#">Model</a> class . . . . .	280
header/ <a href="#">Resources.h</a>	
Header file for the <a href="#">Resources</a> class . . . . .	296
header/ <a href="#">std_includes.h</a>	
Header file which simply batches together some standard includes . . . . .	297
header/Production/ <a href="#">Production.h</a>	
Header file for the <a href="#">Production</a> class . . . . .	288
header/Production/Combustion/ <a href="#">Combustion.h</a>	
Header file for the <a href="#">Combustion</a> class . . . . .	281
header/Production/Combustion/ <a href="#">Diesel.h</a>	
Header file for the <a href="#">Diesel</a> class . . . . .	284
header/Production/Noncombustion/ <a href="#">Hydro.h</a>	
Header file for the <a href="#">Hydro</a> class . . . . .	285
header/Production/Noncombustion/ <a href="#">Noncombustion.h</a>	
Header file for the <a href="#">Noncombustion</a> class . . . . .	287
header/Production/Renewable/ <a href="#">Renewable.h</a>	
Header file for the <a href="#">Renewable</a> class . . . . .	289
header/Production/Renewable/ <a href="#">Solar.h</a>	
Header file for the <a href="#">Solar</a> class . . . . .	290
header/Production/Renewable/ <a href="#">Tidal.h</a>	
Header file for the <a href="#">Tidal</a> class . . . . .	291

## Chapter 4

# Class Documentation

### 4.1 Combustion Class Reference

The root of the [Combustion](#) branch of the [Production](#) hierarchy. This branch contains derived classes which model the production of energy by way of combustibles.

```
#include <Combustion.h>
```

Inheritance diagram for Combustion:

Collaboration diagram for Combustion:

## Public Member Functions

- **Combustion** (void)  
*Constructor (dummy) for the **Combustion** class.*
- **Combustion** (int, double, **CombustionInputs**, std::vector< double > \*)  
*Constructor (intended) for the **Combustion** class.*
- virtual void **handleReplacement** (int)  
*Method to handle asset replacement and capital cost incursion, if applicable.*
- void **computeFuelAndEmissions** (void)  
*Helper method to compute the total fuel consumption and emissions over the **Model** run.*
- void **computeEconomics** (std::vector< double > \*)  
*Helper method to compute key economic metrics for the **Model** run.*
- virtual double **requestProductionkW** (int, double, double)
- virtual double **commit** (int, double, double, double)  
*Method which takes in production and load for the current timestep, computes and records dispatch and curtailment, and then returns remaining load.*
- double **getFuelConsumptionL** (double, double)  
*Method which takes in production and returns volume of fuel burned over the given interval of time.*
- **Emissions** **getEmissionskg** (double)  
*Method which takes in volume of fuel consumed and returns mass spectrum of resulting emissions.*
- void **writeResults** (std::string, std::vector< double > \*, int, int=-1)  
*Method which writes **Combustion** results to an output directory.*
- virtual **~Combustion** (void)  
*Destructor for the **Combustion** class.*

## Public Attributes

- [CombustionType](#) type  
*The type (CombustionType) of the asset.*
- [FuelMode](#) fuel\_mode  
*The fuel mode to use in modelling fuel consumption.*
- [Emissions](#) total\_emissions  
*An [Emissions](#) structure for holding total emissions [kg].*
- double [fuel\\_cost\\_L](#)  
*The cost of fuel [1/L] (undefined currency).*
- double [nominal\\_fuel\\_escalation\\_annual](#)  
*The nominal, annual fuel escalation rate to use in computing model economics.*
- double [real\\_fuel\\_escalation\\_annual](#)  
*The real, annual fuel escalation rate used in computing model economics. Is computed from the given nominal inflation and discount rates.*
- double [linear\\_fuel\\_slope\\_LkWh](#)  
*The slope [L/kWh] to use in computing linearized fuel consumption. This is fuel consumption per unit energy produced.*
- double [linear\\_fuel\\_intercept\\_LkWh](#)  
*The intercept [L/kWh] to use in computing linearized fuel consumption. This is fuel consumption per unit energy produced.*
- double [CO2\\_emissions\\_intensity\\_kgL](#)  
*Carbon dioxide (CO2) emissions intensity [kg/L].*
- double [CO\\_emissions\\_intensity\\_kgL](#)  
*Carbon monoxide (CO) emissions intensity [kg/L].*
- double [NOx\\_emissions\\_intensity\\_kgL](#)  
*Nitrogen oxide (NOx) emissions intensity [kg/L].*
- double [SOx\\_emissions\\_intensity\\_kgL](#)  
*Sulfur oxide (SOx) emissions intensity [kg/L].*
- double [CH4\\_emissions\\_intensity\\_kgL](#)  
*Methane (CH4) emissions intensity [kg/L].*
- double [PM\\_emissions\\_intensity\\_kgL](#)  
*Particulate Matter (PM) emissions intensity [kg/L].*
- double [total\\_fuel\\_consumed\\_L](#)  
*The total fuel consumed [L] over a model run.*
- std::string [fuel\\_mode\\_str](#)  
*A string describing the fuel mode of the asset.*
- std::vector< double > [fuel\\_consumption\\_vec\\_L](#)  
*A vector of fuel consumed [L] over each modelling time step.*
- std::vector< double > [fuel\\_cost\\_vec](#)  
*A vector of fuel costs (undefined currency) incurred over each modelling time step. These costs are not discounted (i.e., these are actual costs).*
- std::vector< double > [CO2\\_emissions\\_vec\\_kg](#)  
*A vector of carbon dioxide (CO2) emitted [kg] over each modelling time step.*
- std::vector< double > [CO\\_emissions\\_vec\\_kg](#)  
*A vector of carbon monoxide (CO) emitted [kg] over each modelling time step.*
- std::vector< double > [NOx\\_emissions\\_vec\\_kg](#)  
*A vector of nitrogen oxide (NOx) emitted [kg] over each modelling time step.*
- std::vector< double > [SOx\\_emissions\\_vec\\_kg](#)  
*A vector of sulfur oxide (SOx) emitted [kg] over each modelling time step.*
- std::vector< double > [CH4\\_emissions\\_vec\\_kg](#)  
*A vector of methane (CH4) emitted [kg] over each modelling time step.*
- std::vector< double > [PM\\_emissions\\_vec\\_kg](#)  
*A vector of particulate matter (PM) emitted [kg] over each modelling time step.*

## Private Member Functions

- void `__checkInputs` ([CombustionInputs](#))  
*Helper method to check inputs to the [Combustion](#) constructor.*
- virtual void `__writeSummary` (std::string)
- virtual void `__writeTimeSeries` (std::string, std::vector< double > \*, int=-1)

### 4.1.1 Detailed Description

The root of the [Combustion](#) branch of the [Production](#) hierarchy. This branch contains derived classes which model the production of energy by way of combustibles.

### 4.1.2 Constructor & Destructor Documentation

#### 4.1.2.1 `Combustion()` [1/2]

```
Combustion::Combustion (
    void )
```

Constructor (dummy) for the [Combustion](#) class.

```
102 {
103     return;
104 } /* Combustion() */
```

#### 4.1.2.2 `Combustion()` [2/2]

```
Combustion::Combustion (
    int n_points,
    double n_years,
    CombustionInputs combustion_inputs,
    std::vector< double > * time_vec_hrs_ptr )
```

Constructor (intended) for the [Combustion](#) class.

#### Parameters

<code>n_points</code>	The number of points in the modelling time series.
<code>n_years</code>	The number of years being modelled.
<code>combustion_inputs</code>	A structure of <a href="#">Combustion</a> constructor inputs.
<code>time_vec_hrs_ptr</code>	A pointer to the vector containing the modelling time series.

```
136 :
137 Production(
138     n_points,
139     n_years,
140     combustion_inputs.production_inputs,
141     time_vec_hrs_ptr
142 )
```

```

143 {
144     // 1. check inputs
145     this->__checkInputs(combustion_inputs);
146
147     // 2. set attributes
148     this->fuel_mode = combustion_inputs.fuel_mode;
149
150     switch (this->fuel_mode) {
151         case (FuelMode :: FUEL_MODE_LINEAR): {

219
220     return;
221 } /* Combustion() */

```

#### 4.1.2.3 ~Combustion()

```
Combustion::~Combustion (
    void ) [virtual]
```

Destructor for the [Combustion](#) class.

```
559 {
560     // 1. destruction print
561     if (this->print_flag) {
562         std::cout << "Combustion object at " << this << " destroyed" << std::endl;
563     }
564
565     return;
566 } /* ~Combustion() */
```

### 4.1.3 Member Function Documentation

#### 4.1.3.1 \_\_checkInputs()

```
void Combustion::__checkInputs (
    CombustionInputs combustion_inputs ) [private]
```

Helper method to check inputs to the [Combustion](#) constructor.

##### Parameters

<i>combustion_inputs</i>	A structure of <a href="#">Combustion</a> constructor inputs.
--------------------------	---

```
65 {
66     // 1. if FUEL_MODE_LOOKUP, check that path is given
67     if (
68         combustion_inputs.fuel_mode == FuelMode :: FUEL_MODE_LOOKUP and
69         combustion_inputs.path_2_fuel_interp_data.empty()
70     ) {
71         std::string error_str = "ERROR: Combustion() fuel mode was set to ";
72         error_str += "FuelMode::FUEL_MODE_LOOKUP, but no path to fuel interpolation ";
73         error_str += "data was given";
74
75         #ifdef _WIN32
76             std::cout << error_str << std::endl;
77         #endif
78
79         throw std::invalid_argument(error_str);
80     }
81
82     return;
83 } /* __checkInputs() */
```

#### 4.1.3.2 \_\_writeSummary()

```
virtual void Combustion::__writeSummary (
    std::string ) [inline], [private], [virtual]
```

Reimplemented in [Diesel](#).

```
130 {return;}
```

#### 4.1.3.3 \_\_writeTimeSeries()

```
virtual void Combustion::__writeTimeSeries (
    std::string ,
    std::vector< double > * ,
    int = -1 ) [inline], [private], [virtual]
```

Reimplemented in [Diesel](#).

```
135         {return;};
```

#### 4.1.3.4 commit()

```
double Combustion::commit (
    int timestep,
    double dt_hrs,
    double production_kW,
    double load_kW ) [virtual]
```

Method which takes in production and load for the current timestep, computes and records dispatch and curtailment, and then returns remaining load.

##### Parameters

<i>timestep</i>	The timestep (i.e., time series index) for the request.
<i>dt_hrs</i>	The interval of time [hrs] associated with the timestep.
<i>production_kW</i>	The production [kW] of the asset in this timestep.
<i>load_kW</i>	The load [kW] passed to the asset in this timestep.

##### Returns

The load [kW] remaining after the dispatch is deducted from it.

Reimplemented from [Production](#).

Reimplemented in [Diesel](#).

```
351 {
352     // 1. invoke base class method
353     load_kW = Production::commit(
354         timestep,
355         dt_hrs,
356         production_kW,
357         load_kW
358     );
359
360
361     if (this->is_running) {
362         // 2. compute and record fuel consumption
363         double fuel_consumed_L = this->getFuelConsumptionL(dt_hrs, production_kW);
364         this->fuel_consumption_vec_L[timestep] = fuel_consumed_L;
365
366         // 3. compute and record emissions
367         Emissions emissions = this->getEmissionskg(fuel_consumed_L);
368         this->CO2_emissions_vec_kg[timestep] = emissions.CO2_kg;
369         this->CO_emissions_vec_kg[timestep] = emissions.CO_kg;
370         this->NOx_emissions_vec_kg[timestep] = emissions.NOx_kg;
371         this->SOx_emissions_vec_kg[timestep] = emissions.SOx_kg;
372         this->CH4_emissions_vec_kg[timestep] = emissions.CH4_kg;
373         this->PM_emissions_vec_kg[timestep] = emissions.PM_kg;
374
375         // 4. incur fuel costs
```

```

376         this->fuel_cost_vec[timestep] = fuel_consumed_L * this->fuel_cost_L;
377     }
378
379     return load_kW;
380 } /* commit() */

```

#### 4.1.3.5 computeEconomics()

```

void Combustion::computeEconomics (
    std::vector< double > * time_vec_hrs_ptr ) [virtual]

```

Helper method to compute key economic metrics for the [Model](#) run.

Ref: [HOMER \[2023b\]](#)

##### Parameters

<i>time_vec_hrs_ptr</i>	A pointer to the time_vec_hrs attribute of the <a href="#">ElectricalLoad</a> .
-------------------------	---

Reimplemented from [Production](#).

```

295 {
296     // 1. account for fuel costs in net present cost
297     double t_hrs = 0;
298     double real_fuel_escalation_scalar = 0;
299
300     for (int i = 0; i < this->n_points; i++) {
301         t_hrs = time_vec_hrs_ptr->at(i);
302
303         real_fuel_escalation_scalar = 1.0 / pow(
304             1 + this->real_fuel_escalation_annual,
305             t_hrs / 8760
306         );
307
308         this->net_present_cost += real_fuel_escalation_scalar * this->fuel_cost_vec[i];
309     }
310
311     // 2. invoke base class method
312     Production::computeEconomics(time_vec_hrs_ptr);
313
314     return;
315 } /* computeEconomics() */

```

#### 4.1.3.6 computeFuelAndEmissions()

```

void Combustion::computeFuelAndEmissions (
    void )

```

Helper method to compute the total fuel consumption and emissions over the [Model](#) run.

```

263 {
264     for (int i = 0; i < n_points; i++) {
265         this->total_fuel_consumed_L += this->fuel_consumption_vec_L[i];
266
267         this->total_emissions.CO2_kg += this->CO2_emissions_vec_kg[i];
268         this->total_emissions.CO_kg += this->CO_emissions_vec_kg[i];
269         this->total_emissions.NOx_kg += this->NOx_emissions_vec_kg[i];
270         this->total_emissions.SOx_kg += this->SOx_emissions_vec_kg[i];
271         this->total_emissions.CH4_kg += this->CH4_emissions_vec_kg[i];
272         this->total_emissions.PM_kg += this->PM_emissions_vec_kg[i];
273     }
274
275     return;
276 } /* computeFuelAndEmissions() */

```

## 4.1.3.7 getEmissionskg()

```
Emissions Combustion::getEmissionskg (
    double fuel_consumed_L )
```

Method which takes in volume of fuel consumed and returns mass spectrum of resulting emissions.

## Parameters

<i>fuel_consumed_L</i>	The volume of fuel consumed [L].
------------------------	----------------------------------

## Returns

A structure containing the mass spectrum of resulting emissions.

```
459                                     {
460     Emissions emissions;
461
462     emissions.CO2_kg = this->CO2_emissions_intensity_kgL * fuel_consumed_L;
463     emissions.CO_kg = this->CO_emissions_intensity_kgL * fuel_consumed_L;
464     emissions.NOx_kg = this->NOx_emissions_intensity_kgL * fuel_consumed_L;
465     emissions.SOx_kg = this->SOx_emissions_intensity_kgL * fuel_consumed_L;
466     emissions.CH4_kg = this->CH4_emissions_intensity_kgL * fuel_consumed_L;
467     emissions.PM_kg = this->PM_emissions_intensity_kgL * fuel_consumed_L;
468
469     return emissions;
470 } /* getEmissionskg() */
```

## 4.1.3.8 getFuelConsumptionL()

```
double Combustion::getFuelConsumptionL (
    double dt_hrs,
    double production_kW )
```

Method which takes in production and returns volume of fuel burned over the given interval of time.

## Parameters

<i>dt_hrs</i>	The interval of time [hrs] associated with the timestep.
<i>production_kW</i>	The production [kW] of the asset in this timestep.

## Returns

The volume of fuel consumed [L].

```
402 {
403     double fuel_consumed_L = 0;
404
405     switch (this->fuel_mode) {
406         case (FuelMode :: FUEL_MODE_LINEAR): {
407             fuel_consumed_L = (
408                 this->linear_fuel_slope_LkWh * production_kW +
409                 this->linear_fuel_intercept_LkWh * this->capacity_kW
410             ) * dt_hrs;
411
412             break;
413         }
414
415         case (FuelMode :: FUEL_MODE_LOOKUP): {
```

```

416         double load_ratio = production_kW / this->capacity_kW;
417
418         fuel_consumed_L = this->interpolator.interp1D(0, load_ratio) * dt_hrs;
419
420         break;
421     }
422
423     default: {
424         std::string error_str = "ERROR: Combustion::getFuelConsumptionL(): ";
425         error_str += "fuel mode ";
426         error_str += std::to_string(this->fuel_mode);
427         error_str += " not recognized";
428
429         #ifdef _WIN32
430             std::cout << error_str << std::endl;
431         #endif
432
433         throw std::runtime_error(error_str);
434
435         break;
436     }
437 }
438
439 return fuel_consumed_L;
440 } /* getFuelConsumptionL() */

```

#### 4.1.3.9 handleReplacement()

```

void Combustion::handleReplacement (
    int timestep ) [virtual]

```

Method to handle asset replacement and capital cost incursion, if applicable.

##### Parameters

<i>timestep</i>	The current time step of the <a href="#">Model</a> run.
-----------------	---

Reimplemented from [Production](#).

Reimplemented in [Diesel](#).

```

239 {
240     // 1. reset attributes
241     //...
242
243     // 2. invoke base class method
244     Production::handleReplacement(timestep);
245
246     return;
247 } /* __handleReplacement() */

```

#### 4.1.3.10 requestProductionkW()

```

virtual double Combustion::requestProductionkW (
    int ,
    double ,
    double ) [inline], [virtual]

```

Reimplemented in [Diesel](#).

```

181 {return 0;}

```

#### 4.1.3.11 writeResults()

```
void Combustion::writeResults (
    std::string write_path,
    std::vector< double > * time_vec_hrs_ptr,
    int combustion_index,
    int max_lines = -1 )
```

Method which writes [Combustion](#) results to an output directory.

##### Parameters

<i>write_path</i>	A path (either relative or absolute) to the directory location where results are to be written. If already exists, will overwrite.
<i>time_vec_hrs_ptr</i>	A pointer to the <code>time_vec_hrs</code> attribute of the <a href="#">ElectricalLoad</a> .
<i>combustion_index</i>	An integer which corresponds to the index of the <a href="#">Combustion</a> asset in the <a href="#">Model</a> .
<i>max_lines</i>	The maximum number of lines of output to write. If $<0$ , then all available lines are written. If $=0$ , then only summary results are written.

```
506 {
507     // 1. handle sentinel
508     if (max_lines < 0) {
509         max_lines = this->n_points;
510     }
511
512     // 2. create subdirectories
513     write_path += "Production/";
514     if (not std::filesystem::is_directory(write_path)) {
515         std::filesystem::create_directory(write_path);
516     }
517
518     write_path += "Combustion/";
519     if (not std::filesystem::is_directory(write_path)) {
520         std::filesystem::create_directory(write_path);
521     }
522
523     write_path += this->type_str;
524     write_path += "_";
525     write_path += std::to_string(int(ceil(this->capacity_kW)));
526     write_path += "kW_idx";
527     write_path += std::to_string(combustion_index);
528     write_path += "/";
529     std::filesystem::create_directory(write_path);
530
531     // 3. write summary
532     this->__writeSummary(write_path);
533
534     // 4. write time series
535     if (max_lines > this->n_points) {
536         max_lines = this->n_points;
537     }
538
539     if (max_lines > 0) {
540         this->__writeTimeSeries(write_path, time_vec_hrs_ptr, max_lines);
541     }
542
543     return;
544 } /* writeResults() */
```

### 4.1.4 Member Data Documentation

#### 4.1.4.1 CH4\_emissions\_intensity\_kgL

```
double Combustion::CH4_emissions_intensity_kgL
```

Methane (CH4) emissions intensity [kg/L].

#### 4.1.4.2 CH4\_emissions\_vec\_kg

```
std::vector<double> Combustion::CH4_emissions_vec_kg
```

A vector of methane (CH4) emitted [kg] over each modelling time step.

#### 4.1.4.3 CO2\_emissions\_intensity\_kgL

```
double Combustion::CO2_emissions_intensity_kgL
```

Carbon dioxide (CO2) emissions intensity [kg/L].

#### 4.1.4.4 CO2\_emissions\_vec\_kg

```
std::vector<double> Combustion::CO2_emissions_vec_kg
```

A vector of carbon dioxide (CO2) emitted [kg] over each modelling time step.

#### 4.1.4.5 CO\_emissions\_intensity\_kgL

```
double Combustion::CO_emissions_intensity_kgL
```

Carbon monoxide (CO) emissions intensity [kg/L].

#### 4.1.4.6 CO\_emissions\_vec\_kg

```
std::vector<double> Combustion::CO_emissions_vec_kg
```

A vector of carbon monoxide (CO) emitted [kg] over each modelling time step.

#### 4.1.4.7 fuel\_consumption\_vec\_L

```
std::vector<double> Combustion::fuel_consumption_vec_L
```

A vector of fuel consumed [L] over each modelling time step.

#### 4.1.4.8 fuel\_cost\_L

```
double Combustion::fuel_cost_L
```

The cost of fuel [1/L] (undefined currency).

#### 4.1.4.9 fuel\_cost\_vec

```
std::vector<double> Combustion::fuel_cost_vec
```

A vector of fuel costs (undefined currency) incurred over each modelling time step. These costs are not discounted (i.e., these are actual costs).

#### 4.1.4.10 fuel\_mode

```
FuelMode Combustion::fuel_mode
```

The fuel mode to use in modelling fuel consumption.

#### 4.1.4.11 fuel\_mode\_str

```
std::string Combustion::fuel_mode_str
```

A string describing the fuel mode of the asset.

#### 4.1.4.12 linear\_fuel\_intercept\_LkWh

```
double Combustion::linear_fuel_intercept_LkWh
```

The intercept [L/kWh] to use in computing linearized fuel consumption. This is fuel consumption per unit energy produced.

#### 4.1.4.13 linear\_fuel\_slope\_LkWh

```
double Combustion::linear_fuel_slope_LkWh
```

The slope [L/kWh] to use in computing linearized fuel consumption. This is fuel consumption per unit energy produced.

#### 4.1.4.14 nominal\_fuel\_escalation\_annual

```
double Combustion::nominal_fuel_escalation_annual
```

The nominal, annual fuel escalation rate to use in computing model economics.

#### 4.1.4.15 NOx\_emissions\_intensity\_kgL

```
double Combustion::NOx_emissions_intensity_kgL
```

Nitrogen oxide (NOx) emissions intensity [kg/L].

#### 4.1.4.16 NOx\_emissions\_vec\_kg

```
std::vector<double> Combustion::NOx_emissions_vec_kg
```

A vector of nitrogen oxide (NOx) emitted [kg] over each modelling time step.

#### 4.1.4.17 PM\_emissions\_intensity\_kgL

```
double Combustion::PM_emissions_intensity_kgL
```

Particulate Matter (PM) emissions intensity [kg/L].

#### 4.1.4.18 PM\_emissions\_vec\_kg

```
std::vector<double> Combustion::PM_emissions_vec_kg
```

A vector of particulate matter (PM) emitted [kg] over each modelling time step.

#### 4.1.4.19 real\_fuel\_escalation\_annual

```
double Combustion::real_fuel_escalation_annual
```

The real, annual fuel escalation rate used in computing model economics. Is computed from the given nominal inflation and discount rates.

#### 4.1.4.20 SOx\_emissions\_intensity\_kgL

```
double Combustion::SOx_emissions_intensity_kgL
```

Sulfur oxide (SOx) emissions intensity [kg/L].

#### 4.1.4.21 SOx\_emissions\_vec\_kg

```
std::vector<double> Combustion::SOx_emissions_vec_kg
```

A vector of sulfur oxide (SOx) emitted [kg] over each modelling time step.

#### 4.1.4.22 total\_emissions

```
Emissions Combustion::total_emissions
```

An [Emissions](#) structure for holding total emissions [kg].

#### 4.1.4.23 total\_fuel\_consumed\_L

```
double Combustion::total_fuel_consumed_L
```

The total fuel consumed [L] over a model run.

#### 4.1.4.24 type

```
CombustionType Combustion::type
```

The type (CombustionType) of the asset.

The documentation for this class was generated from the following files:

- [header/Production/Combustion/Combustion.h](#)
- [source/Production/Combustion/Combustion.cpp](#)

## 4.2 CombustionInputs Struct Reference

A structure which bundles the necessary inputs for the [Combustion](#) constructor. Provides default values for every necessary input. Note that this structure encapsulates [ProductionInputs](#).

```
#include <Combustion.h>
```

Collaboration diagram for CombustionInputs:

### Public Attributes

- [ProductionInputs](#) [production\\_inputs](#)  
*An encapsulated [ProductionInputs](#) instance.*
- [FuelMode](#) [fuel\\_mode](#) = [FuelMode](#) :: [FUEL\\_MODE\\_LINEAR](#)  
*The fuel mode to use in modelling fuel consumption.*
- double [nominal\\_fuel\\_escalation\\_annual](#) = 0.05  
*The nominal, annual fuel escalation rate to use in computing model economics.*
- std::string [path\\_2\\_fuel\\_interp\\_data](#) = ""  
*A path (either relative or absolute) to a set of fuel consumption data.*

### 4.2.1 Detailed Description

A structure which bundles the necessary inputs for the [Combustion](#) constructor. Provides default values for every necessary input. Note that this structure encapsulates [ProductionInputs](#).

### 4.2.2 Member Data Documentation

#### 4.2.2.1 fuel\_mode

```
FuelMode CombustionInputs::fuel_mode = FuelMode :: FUEL\_MODE\_LINEAR
```

The fuel mode to use in modelling fuel consumption.

#### 4.2.2.2 nominal\_fuel\_escalation\_annual

```
double CombustionInputs::nominal_fuel_escalation_annual = 0.05
```

The nominal, annual fuel escalation rate to use in computing model economics.

#### 4.2.2.3 path\_2\_fuel\_interp\_data

```
std::string CombustionInputs::path_2_fuel_interp_data = ""
```

A path (either relative or absolute) to a set of fuel consumption data.

#### 4.2.2.4 production\_inputs

```
ProductionInputs CombustionInputs::production_inputs
```

An encapsulated [ProductionInputs](#) instance.

The documentation for this struct was generated from the following file:

- header/Production/Combustion/[Combustion.h](#)

## 4.3 Controller Class Reference

A class which contains a various dispatch control logic. Intended to serve as a component class of [Model](#).

```
#include <Controller.h>
```

### Public Member Functions

- [Controller](#) (void)  
*Constructor for the [Controller](#) class.*
- void [setControlMode](#) ([ControlMode](#))
- void [init](#) ([ElectricalLoad](#) \*, std::vector< [Renewable](#) \* > \*, [Resources](#) \*, std::vector< [Combustion](#) \* > \*)  
*Method to initialize the [Controller](#) component of the [Model](#).*
- void [applyDispatchControl](#) ([ElectricalLoad](#) \*, [Resources](#) \*, std::vector< [Combustion](#) \* > \*, std::vector< [Noncombustion](#) \* > \*, std::vector< [Renewable](#) \* > \*, std::vector< [Storage](#) \* > \*)  
*Method to apply dispatch control at every point in the modelling time series.*
- void [clear](#) (void)  
*Method to clear all attributes of the [Controller](#) object.*
- [~Controller](#) (void)  
*Destructor for the [Controller](#) class.*

## Public Attributes

- [ControlMode](#) `control_mode`  
The *ControlMode* that is active in the *Model*.
- `std::string` `control_string`  
A string describing the active *ControlMode*.
- `std::vector< double >` `net_load_vec_kW`  
A vector of net load values [kW] at each point in the modelling time series. Net load is defined as load minus all available *Renewable* production.
- `std::vector< double >` `missed_load_vec_kW`  
A vector of missed load values [kW] at each point in the modelling time series.
- `std::map< double, std::vector< bool > >` `combustion_map`  
A map of all possible combustion states, for use in determining optimal dispatch.

## Private Member Functions

- `void` `__computeNetLoad` (*ElectricalLoad* \*, `std::vector< Renewable * >` \*, *Resources* \*)  
Helper method to compute and populate the net load vector.
- `void` `__constructCombustionMap` (`std::vector< Combustion * >` \*)  
Helper method to construct a *Combustion* map, for use in determining.
- `void` `__applyLoadFollowingControl_CHARGING` (int, *ElectricalLoad* \*, *Resources* \*, `std::vector< Combustion * >` \*, `std::vector< Noncombustion * >` \*, `std::vector< Renewable * >` \*, `std::vector< Storage * >` \*)  
Helper method to apply load following control action for given timestep of the *Model* run when net load  $\leq 0$ .
- `void` `__applyLoadFollowingControl_DISCHARGING` (int, *ElectricalLoad* \*, *Resources* \*, `std::vector< Combustion * >` \*, `std::vector< Noncombustion * >` \*, `std::vector< Renewable * >` \*, `std::vector< Storage * >` \*)  
Helper method to apply load following control action for given timestep of the *Model* run when net load  $> 0$ .
- `void` `__applyCycleChargingControl_CHARGING` (int, *ElectricalLoad* \*, *Resources* \*, `std::vector< Combustion * >` \*, `std::vector< Noncombustion * >` \*, `std::vector< Renewable * >` \*, `std::vector< Storage * >` \*)  
Helper method to apply cycle charging control action for given timestep of the *Model* run when net load  $\leq 0$ . Simply defaults to load following control.
- `void` `__applyCycleChargingControl_DISCHARGING` (int, *ElectricalLoad* \*, *Resources* \*, `std::vector< Combustion * >` \*, `std::vector< Noncombustion * >` \*, `std::vector< Renewable * >` \*, `std::vector< Storage * >` \*)  
Helper method to apply cycle charging control action for given timestep of the *Model* run when net load  $> 0$ . Defaults to load following control if no depleted storage assets.
- `void` `__handleStorageCharging` (int, double, `std::list< Storage * >` \*, `std::vector< Combustion * >` \*, `std::vector< Noncombustion * >` \*, `std::vector< Renewable * >` \*)  
Helper method to handle the charging of the given *Storage* assets.
- `void` `__handleStorageCharging` (int, double, `std::vector< Storage * >` \*, `std::vector< Combustion * >` \*, `std::vector< Noncombustion * >` \*, `std::vector< Renewable * >` \*)  
Helper method to handle the charging of the given *Storage* assets.
- `double` `__getRenewableProduction` (int, double, *Renewable* \*, *Resources* \*)  
Helper method to compute the production from the given *Renewable* asset at the given point in time.
- `double` `__handleCombustionDispatch` (int, double, double, `std::vector< Combustion * >` \*, bool)  
*bool is\_cycle\_charging* )
- `double` `__handleNoncombustionDispatch` (int, double, double, `std::vector< Noncombustion * >` \*, *Resources* \*)
- `double` `__handleStorageDischarging` (int, double, double, `std::list< Storage * >` \*)  
Helper method to handle the discharging of the given *Storage* assets.

### 4.3.1 Detailed Description

A class which contains a various dispatch control logic. Intended to serve as a component class of [Model](#).

### 4.3.2 Constructor & Destructor Documentation

#### 4.3.2.1 Controller()

```
Controller::Controller (
    void )
```

Constructor for the [Controller](#) class.

```
1273 {
1274     return;
1275 } /* Controller() */
```

#### 4.3.2.2 ~Controller()

```
Controller::~~Controller (
    void )
```

Destructor for the [Controller](#) class.

```
1519 {
1520     this->clear();
1521
1522     return;
1523 } /* ~Controller() */
```

### 4.3.3 Member Function Documentation

#### 4.3.3.1 \_\_applyCycleChargingControl\_CHARGING()

```
void Controller::__applyCycleChargingControl_CHARGING (
    int timestep,
    ElectricalLoad * electrical_load_ptr,
    Resources * resources_ptr,
    std::vector< Combustion * > * combustion_ptr_vec_ptr,
    std::vector< Noncombustion * > * noncombustion_ptr_vec_ptr,
    std::vector< Renewable * > * renewable_ptr_vec_ptr,
    std::vector< Storage * > * storage_ptr_vec_ptr ) [private]
```

Helper method to apply cycle charging control action for given timestep of the [Model](#) run when net load  $\leq 0$ . Simply defaults to load following control.

## Parameters

<i>timestep</i>	The current time step of the <a href="#">Model</a> run.
<i>electrical_load_ptr</i>	A pointer to the <a href="#">ElectricalLoad</a> component of the <a href="#">Model</a> .
<i>resources_ptr</i>	A pointer to the <a href="#">Resources</a> component of the <a href="#">Model</a> .
<i>combustion_ptr_vec_ptr</i>	A pointer to the <a href="#">Combustion</a> pointer vector of the <a href="#">Model</a> .
<i>noncombustion_ptr_vec_ptr</i>	A pointer to the <a href="#">Noncombustion</a> pointer vector of the <a href="#">Model</a> .
<i>renewable_ptr_vec_ptr</i>	A pointer to the <a href="#">Renewable</a> pointer vector of the <a href="#">Model</a> .
<i>storage_ptr_vec_ptr</i>	A pointer to the <a href="#">Storage</a> pointer vector of the <a href="#">Model</a> .

```

475 {
476     // 1. default to load following
477     this->__applyLoadFollowingControl_CHARGING(
478         timestep,
479         electrical_load_ptr,
480         resources_ptr,
481         combustion_ptr_vec_ptr,
482         noncombustion_ptr_vec_ptr,
483         renewable_ptr_vec_ptr,
484         storage_ptr_vec_ptr
485     );
486
487     return;
488 } /* __applyCycleChargingControl_CHARGING() */

```

## 4.3.3.2 \_\_applyCycleChargingControl\_DISCHARGING()

```

void Controller::__applyCycleChargingControl_DISCHARGING (
    int timestep,
    ElectricalLoad * electrical_load_ptr,
    Resources * resources_ptr,
    std::vector< Combustion * > * combustion_ptr_vec_ptr,
    std::vector< Noncombustion * > * noncombustion_ptr_vec_ptr,
    std::vector< Renewable * > * renewable_ptr_vec_ptr,
    std::vector< Storage * > * storage_ptr_vec_ptr ) [private]

```

Helper method to apply cycle charging control action for given timestep of the [Model](#) run when net load > 0. Defaults to load following control if no depleted storage assets.

## Parameters

<i>timestep</i>	The current time step of the <a href="#">Model</a> run.
<i>electrical_load_ptr</i>	A pointer to the <a href="#">ElectricalLoad</a> component of the <a href="#">Model</a> .
<i>resources_ptr</i>	A pointer to the <a href="#">Resources</a> component of the <a href="#">Model</a> .
<i>combustion_ptr_vec_ptr</i>	A pointer to the <a href="#">Combustion</a> pointer vector of the <a href="#">Model</a> .
<i>noncombustion_ptr_vec_ptr</i>	A pointer to the <a href="#">Noncombustion</a> pointer vector of the <a href="#">Model</a> .
<i>renewable_ptr_vec_ptr</i>	A pointer to the <a href="#">Renewable</a> pointer vector of the <a href="#">Model</a> .
<i>storage_ptr_vec_ptr</i>	A pointer to the <a href="#">Storage</a> pointer vector of the <a href="#">Model</a> .

## curtailment

```

536 {
537     // 1. get dt_hrs, net load
538     double dt_hrs = electrical_load_ptr->dt_vec_hrs[timestep];
539     double net_load_kW = this->net_load_vec_kW[timestep];
540
541     // 2. partition Storage assets into depleted and non-depleted
542     std::list<Storage*> depleted_storage_ptr_list;

```

```

543     std::list<Storage*> nondepleted_storage_ptr_list;

```

#### 4.3.3.3 \_\_applyLoadFollowingControl\_CHARGING()

```

void Controller::__applyLoadFollowingControl_CHARGING (
    int timestep,
    ElectricalLoad * electrical_load_ptr,

```

```

Resources * resources_ptr,
std::vector< Combustion * > * combustion_ptr_vec_ptr,
std::vector< Noncombustion * > * noncombustion_ptr_vec_ptr,
std::vector< Renewable * > * renewable_ptr_vec_ptr,
std::vector< Storage * > * storage_ptr_vec_ptr ) [private]

```

Helper method to apply load following control action for given timestep of the [Model](#) run when net load  $\leq 0$ ;

#### Parameters

<i>timestep</i>	The current time step of the <a href="#">Model</a> run.
<i>electrical_load_ptr</i>	A pointer to the <a href="#">ElectricalLoad</a> component of the <a href="#">Model</a> .
<i>resources_ptr</i>	A pointer to the <a href="#">Resources</a> component of the <a href="#">Model</a> .
<i>combustion_ptr_vec_ptr</i>	A pointer to the <a href="#">Combustion</a> pointer vector of the <a href="#">Model</a> .
<i>noncombustion_ptr_vec_ptr</i>	A pointer to the <a href="#">Noncombustion</a> pointer vector of the <a href="#">Model</a> .
<i>renewable_ptr_vec_ptr</i>	A pointer to the <a href="#">Renewable</a> pointer vector of the <a href="#">Model</a> .
<i>storage_ptr_vec_ptr</i>	A pointer to the <a href="#">Storage</a> pointer vector of the <a href="#">Model</a> .

```

280 {
281     // 1. get dt_hrs, set net load

    std::vector< Renewable * > * renewable_ptr_vec_ptr,
    std::vector< Storage * > * storage_ptr_vec_ptr ) [private]

```

Helper method to apply load following control action for given timestep of the [Model](#) run when net load  $> 0$ ;

## Parameters

<i>timestep</i>	The current time step of the <a href="#">Model</a> run.
<i>electrical_load_ptr</i>	A pointer to the <a href="#">ElectricalLoad</a> component of the <a href="#">Model</a> .
<i>resources_ptr</i>	A pointer to the <a href="#">Resources</a> component of the <a href="#">Model</a> .
<i>combustion_ptr_vec_ptr</i>	A pointer to the <a href="#">Combustion</a> pointer vector of the <a href="#">Model</a> .
<i>noncombustion_ptr_vec_ptr</i>	A pointer to the <a href="#">Noncombustion</a> pointer vector of the <a href="#">Model</a> .
<i>renewable_ptr_vec_ptr</i>	A pointer to the <a href="#">Renewable</a> pointer vector of the <a href="#">Model</a> .
<i>storage_ptr_vec_ptr</i>	A pointer to the <a href="#">Storage</a> pointer vector of the <a href="#">Model</a> .

## curtailment

```

362 {
363     // 1. get dt_hrs, net load
364     double dt_hrs = electrical_load_ptr->dt_vec_hrs[timestep];
365     double net_load_kW = this->net_load_vec_kW[timestep];
366
367     // 2. partition Storage assets into depleted and non-depleted
368     std::list<Storage*> depleted_storage_ptr_list;
369     std::list<Storage*> nondepleted_storage_ptr_list;
370
371     Storage* storage_ptr;
372     for (size_t i = 0; i < storage_ptr_vec_ptr->size(); i++) {

375         if (storage_ptr->is_depleted) {
376             depleted_storage_ptr_list.push_back(storage_ptr);
377         }
378
379         else {
380             nondepleted_storage_ptr_list.push_back(storage_ptr);
381         }
382     }
383
384     // 3. discharge non-depleted storage assets
385     net_load_kW = this->__handleStorageDischarging(
386         timestep,
387         dt_hrs,
388         net_load_kW,
389         nondepleted_storage_ptr_list
390     );
391
392     // 4. request optimal production from all Noncombustion assets
393     net_load_kW = this->__handleNoncombustionDispatch(
394         timestep,
395         dt_hrs,
396         net_load_kW,
397         noncombustion_ptr_vec_ptr,
398         resources_ptr
399     );
400
401     // 5. request optimal production from all Combustion assets
402     net_load_kW = this->__handleCombustionDispatch(
403         timestep,
404         dt_hrs,
405         net_load_kW,
406         combustion_ptr_vec_ptr,
407         false // is_cycle_charging
408     );
409
410     // 6. attempt to charge depleted Storage assets using any and all available
411     //     charge priority is Combustion, then Renewable
412     this->__handleStorageCharging(
413         timestep,
414         dt_hrs,
415         depleted_storage_ptr_list,
416         combustion_ptr_vec_ptr,
417         noncombustion_ptr_vec_ptr,
418         renewable_ptr_vec_ptr
419     );
420
421
422     // 7. record any missed load
423     if (net_load_kW > 1e-6) {
424         this->missed_load_vec_kW[timestep] = net_load_kW;
425     }
426
427     return;
428 } /* __applyLoadFollowingControl_DISCHARGING() */

```

#### 4.3.3.5 \_\_computeNetLoad()

```
void Controller::__computeNetLoad (
    ElectricalLoad * electrical_load_ptr,
    std::vector< Renewable * > * renewable_ptr_vec_ptr,
    Resources * resources_ptr ) [private]
```

Helper method to compute and populate the net load vector.

The net load at a given point in time is defined as the load at that point in time, minus the sum of all [Renewable](#) production at that point in time. Therefore, a negative net load indicates a surplus of [Renewable](#) production, and a positive net load indicates a deficit of [Renewable](#) production.

##### Parameters

<i>electrical_load_ptr</i>	A pointer to the <a href="#">ElectricalLoad</a> component of the <a href="#">Model</a> .
<i>renewable_ptr_vec_ptr</i>	A pointer to the <a href="#">Renewable</a> pointer vector of the <a href="#">Model</a> .
<i>resources_ptr</i>	A pointer to the <a href="#">Resources</a> component of the <a href="#">Model</a> .

```
82 {
83     // 1. init
84     this->net_load_vec_kW.resize(electrical_load_ptr->n_points, 0);
85     this->missed_load_vec_kW.resize(electrical_load_ptr->n_points, 0);
86
87     // 2. populate net load vector
88     double dt_hrs = 0;
89     double load_kW = 0;
90     double net_load_kW = 0;
91     double production_kW = 0;
92
93     Renewable* renewable_ptr;
94
95     for (int i = 0; i < electrical_load_ptr->n_points; i++) {
96         dt_hrs = electrical_load_ptr->dt_vec_hrs[i];
97         load_kW = electrical_load_ptr->load_vec_kW[i];
98         net_load_kW = load_kW;
99
100         for (size_t j = 0; j < renewable_ptr_vec_ptr->size(); j++) {
101             renewable_ptr = renewable_ptr_vec_ptr->at(j);
102
103             production_kW = this->__getRenewableProduction(
104                 i,
105                 dt_hrs,
106                 renewable_ptr,
107                 resources_ptr
108             );
109
110             load_kW = renewable_ptr->commit(
111                 i,
112                 dt_hrs,
113                 production_kW,
114                 load_kW
115             );
116
117             net_load_kW -= production_kW;
118         }
119
120         this->net_load_vec_kW[i] = net_load_kW;
121     }
122
123     return;
124 } /* __computeNetLoad() */
```

#### 4.3.3.6 \_\_constructCombustionMap()

```
void Controller::__constructCombustionMap (
    std::vector< Combustion * > * combustion_ptr_vec_ptr ) [private]
```

Helper method to construct a [Combustion](#) map, for use in determining.

## Parameters

<code>combustion_ptr_vec_ptr</code>	A pointer to the <a href="#">Combustion</a> pointer vector of the <a href="#">Model</a> .
-------------------------------------	---

```

146 {
147     // 1. get state table dimensions
148     int n_cols = combustion_ptr_vec_ptr->size();
149     int n_rows = pow(2, n_cols);
150
151     // 2. init state table (all possible on/off combinations)
152     std::vector<std::vector<bool>> state_table;
153     state_table.resize(n_rows, {});
154
155     int x = 0;
156     for (int i = 0; i < n_rows; i++) {
157         state_table[i].resize(n_cols, false);
158
159         x = i;
160         for (int j = 0; j < n_cols; j++) {
161             if (x % 2 == 0) {
162                 state_table[i][j] = true;
163             }
164             x /= 2;
165         }
166     }
167
168     // 3. construct combustion map (handle duplicates by keeping rows with minimum
169     //     trues)
170     double total_capacity_kW = 0;
171     int truth_count = 0;
172     int current_truth_count = 0;
173
174     for (int i = 0; i < n_rows; i++) {
175         total_capacity_kW = 0;

#### 4.3.3.7 \_\_getRenewableProduction()

```

double Controller::__getRenewableProduction (
    int timestep,
    double dt_hrs,
    Renewable * renewable_ptr,
    Resources * resources_ptr ) [private]

```

Helper method to compute the production from the given [Renewable](#) asset at the given point in time.

##### Parameters

<i>timestep</i>	The current time step of the <a href="#">Model</a> run.
<i>dt_hrs</i>	The interval of time [hrs] associated with the action.
<i>renewable_ptr</i>	A pointer to the <a href="#">Renewable</a> asset.
<i>resources_ptr</i>	A pointer to the <a href="#">Resources</a> component of the <a href="#">Model</a> .

##### Returns

The production [kW] of the [Renewable](#) asset.

```

904 {
905     double production_kW = 0;

#### 4.3.3.8 \_\_handleCombustionDispatch()

```

double Controller::__handleCombustionDispatch (
    int timestep,
    double dt_hrs,
    double net_load_kW,
    std::vector< Combustion * > * combustion_ptr_vec_ptr,
    bool is_cycle_charging ) [private]

```

bool is\_cycle\_charging )

Helper method to handle the optimal dispatch of [Combustion](#) assets. Dispatches for 1.2x the received net load, so as to ensure a "20% spinning reserve". Dispatches a minimum number of [Combustion](#) assets, which then share the load proportional to their rated capacities.

## Parameters

<i>timestep</i>	The current time step of the <a href="#">Model</a> run.
<i>dt_hrs</i>	The interval of time [hrs] associated with the action.
<i>net_load_kW</i>	The net load [kW] before the dispatch is deducted from it.
<i>combustion_ptr_vec_ptr</i>	A pointer to the <a href="#">Combustion</a> pointer vector of the <a href="#">Model</a> .
<i>is_cycle_charging</i>	A boolean which defines whether to apply cycle charging logic or not.

## Returns

The net load [kW] remaining after the dispatch is deducted from it.

```

```

Helper method to handle the charging of the given [Storage](#) assets.

##### Parameters

<i>timestep</i>	The current time step of the <a href="#">Model</a> run.
<i>dt_hrs</i>	The interval of time [hrs] associated with the action.
<i>storage_ptr_vec_ptr</i>	A pointer to a vector of pointers to the <a href="#">Storage</a> assets that are to be charged.
<i>combustion_ptr_vec_ptr</i>	A pointer to the <a href="#">Combustion</a> pointer vector of the <a href="#">Model</a> .
<i>noncombustion_ptr_vec_ptr</i>	A pointer to the <a href="#">Noncombustion</a> pointer vector of the <a href="#">Model</a> .
<i>renewable_ptr_vec_ptr</i>	A pointer to the <a href="#">Renewable</a> pointer vector of the <a href="#">Model</a> .

```

#### 4.3.3.12 \_\_handleStorageDischarging()

```

double Controller::__handleStorageDischarging (
    int timestep,
    double dt_hrs,
    double net_load_kW,
    std::list< Storage * > storage_ptr_list ) [private]

```

Helper method to handle the discharging of the given [Storage](#) assets.

##### Parameters

<i>timestep</i>	The current time step of the <a href="#">Model</a> run.
<i>dt_hrs</i>	The interval of time [hrs] associated with the action.
<i>storage_ptr_list</i>	A list of pointers to the <a href="#">Storage</a> assets that are to be discharged.

**Returns**

The net load [kW] remaining after the discharge is deducted from it.

```

1226 {
1227     double discharging_kW = 0;
1228     Storage* storage_ptr;
1229     std::list<Storage*>::iterator iter;

1245         );
1246     }
1247     return net_load_kW;
1248 } /* __handleStorageDischarging() */

```

**4.3.3.13 applyDispatchControl()**

```

void Controller::applyDispatchControl (
    ElectricalLoad * electrical_load_ptr,
    Resources * resources_ptr,
    std::vector< Combustion * > * combustion_ptr_vec_ptr,
    std::vector< Noncombustion * > * noncombustion_ptr_vec_ptr,
    std::vector< Renewable * > * renewable_ptr_vec_ptr,
    std::vector< Storage * > * storage_ptr_vec_ptr )

```

Method to apply dispatch control at every point in the modelling time series.

**Parameters**

<i>electrical_load_ptr</i>	A pointer to the <a href="#">ElectricalLoad</a> component of the <a href="#">Model</a> .
<i>resources_ptr</i>	A pointer to the <a href="#">Resources</a> component of the <a href="#">Model</a> .
<i>combustion_ptr_vec_ptr</i>	A pointer to the <a href="#">Combustion</a> pointer vector of the <a href="#">Model</a> .
<i>noncombustion_ptr_vec_ptr</i>	A pointer to the <a href="#">Noncombustion</a> pointer vector of the <a href="#">Model</a> .
<i>renewable_ptr_vec_ptr</i>	A pointer to the <a href="#">Renewable</a> pointer vector of the <a href="#">Model</a> .
<i>storage_ptr_vec_ptr</i>	A pointer to the <a href="#">Storage</a> pointer vector of the <a href="#">Model</a> .

```

1482 return;
1483 } /* applyDispatchControl() */

```

#### 4.3.3.14 clear()

```

void Controller::clear (
    void )

```

Method to clear all attributes of the [Controller](#) object.

```

1498 {
1499     this->net_load_vec_kW.clear();
1500     this->missed_load_vec_kW.clear();
1501     this->combustion_map.clear();
1502
1503     return;
1504 } /* clear() */

```

## 4.3.3.15 init()

```
void Controller::init (
    ElectricalLoad * electrical_load_ptr,
    std::vector< Renewable * > * renewable_ptr_vec_ptr,
    Resources * resources_ptr,
    std::vector< Combustion * > * combustion_ptr_vec_ptr )
```

Method to initialize the [Controller](#) component of the [Model](#).

## Parameters

<i>electrical_load_ptr</i>	A pointer to the <a href="#">ElectricalLoad</a> component of the <a href="#">Model</a> .
<i>renewable_ptr_vec_ptr</i>	A pointer to the <a href="#">Renewable</a> pointer vector of the <a href="#">Model</a> .
<i>resources_ptr</i>	A pointer to the <a href="#">Resources</a> component of the <a href="#">Model</a> .
<i>combustion_ptr_vec_ptr</i>	A pointer to the <a href="#">Combustion</a> pointer vector of the <a href="#">Model</a> .

```
1356 {
1357     // 1. compute net load
1358     this->__computeNetLoad(electrical_load_ptr, renewable_ptr_vec_ptr, resources_ptr);
1359
1360     // 2. construct Combustion table
1361     this->__constructCombustionMap(combustion_ptr_vec_ptr);
1362
1363     return;
1364 } /* init() */
```

## 4.3.3.16 setControlMode()

```
void Controller::setControlMode (
    ControlMode control_mode )
```

## Parameters

<i>control_mode</i>	The <a href="#">ControlMode</a> which is to be active in the <a href="#">Controller</a> .
---------------------	---

```
1290 {
1291     this->control_mode = control_mode;
1292
1293     switch(control_mode) {
1294         case (ControlMode :: LOAD_FOLLOWING): {

1314             throw std::runtime_error(error_str);
1315
1316             break;
1317         }
1318     }
```

```
1319     }  
1320 }  
1321  
1322     return;  
1323 } /* setControlMode() */
```

## 4.3.4 Member Data Documentation

### 4.3.4.1 combustion\_map

```
std::map<double, std::vector<bool> > Controller::combustion_map
```

A map of all possible combustion states, for use in determining optimal dispatch.

### 4.3.4.2 control\_mode

```
ControlMode Controller::control_mode
```

The ControlMode that is active in the [Model](#).

### 4.3.4.3 control\_string

```
std::string Controller::control_string
```

A string describing the active ControlMode.

### 4.3.4.4 missed\_load\_vec\_kW

```
std::vector<double> Controller::missed_load_vec_kW
```

A vector of missed load values [kW] at each point in the modelling time series.

### 4.3.4.5 net\_load\_vec\_kW

```
std::vector<double> Controller::net_load_vec_kW
```

A vector of net load values [kW] at each point in the modelling time series. Net load is defined as load minus all available [Renewable](#) production.

The documentation for this class was generated from the following files:

- source/[Controller.cpp](#)

## 4.4 Diesel Class Reference

A derived class of the [Combustion](#) branch of [Production](#) which models production using a diesel generator.

```
#include <Diesel.h>
```

Inheritance diagram for Diesel:

Collaboration diagram for Diesel:

## Public Member Functions

- [Diesel](#) (void)  
*Constructor (dummy) for the [Diesel](#) class.*
- [Diesel](#) (int, double, [DieselInputs](#), std::vector< double > \*)  
*Constructor (intended) for the [Diesel](#) class.*
- void [handleReplacement](#) (int)  
*Method to handle asset replacement and capital cost incursion, if applicable.*
- double [requestProductionkW](#) (int, double, double)  
*Method which takes in production request, and then returns what the asset can deliver (subject to operating constraints, etc.).*
- double [commit](#) (int, double, double, double)  
*Method which takes in production and load for the current timestep, computes and records dispatch and curtailment, and then returns remaining load.*
- [~Diesel](#) (void)  
*Destructor for the [Diesel](#) class.*

## Public Attributes

- double [minimum\\_load\\_ratio](#)  
*The minimum load ratio of the asset. That is, when the asset is producing, it must produce at least this ratio of its rated capacity.*
- double [minimum\\_runtime\\_hrs](#)  
*The minimum runtime [hrs] of the asset. This is the minimum time that must elapse between successive starts and stops.*
- double [time\\_since\\_last\\_start\\_hrs](#)  
*The time that has elapsed [hrs] since the last start of the asset.*

## Private Member Functions

- void [\\_\\_checkInputs](#) ([DieselInputs](#))  
*Helper method to check inputs to the [Diesel](#) constructor.*
- void [\\_\\_handleStartStop](#) (int, double, double)  
*Helper method (private) to handle the starting/stopping of the diesel generator. The minimum runtime constraint is enforced in this method.*
- double [\\_\\_getGenericFuelSlope](#) (void)  
*Helper method to generate a generic, linearized fuel consumption slope for a diesel generator.*
- double [\\_\\_getGenericFuelIntercept](#) (void)  
*Helper method to generate a generic, linearized fuel consumption intercept for a diesel generator.*
- double [\\_\\_getGenericCapitalCost](#) (void)  
*Helper method to generate a generic diesel generator capital cost.*
- double [\\_\\_getGenericOpMaintCost](#) (void)  
*Helper method (private) to generate a generic diesel generator operation and maintenance cost. This is a cost incurred per unit energy produced.*
- void [\\_\\_writeSummary](#) (std::string)  
*Helper method to write summary results for [Diesel](#).*
- void [\\_\\_writeTimeSeries](#) (std::string, std::vector< double > \*, int=-1)  
*Helper method to write time series results for [Diesel](#).*

### 4.4.1 Detailed Description

A derived class of the [Combustion](#) branch of [Production](#) which models production using a diesel generator.

### 4.4.2 Constructor & Destructor Documentation

#### 4.4.2.1 Diesel() [1/2]

```
Diesel::Diesel (
    void )
```

Constructor (dummy) for the [Diesel](#) class.

```
629 {
630     return;
631 } /* Diesel() */
```

#### 4.4.2.2 Diesel() [2/2]

```
Diesel::Diesel (
    int n_points,
    double n_years,
    DieselInputs diesel_inputs,
    std::vector< double > * time_vec_hrs_ptr )
```

Constructor (intended) for the [Diesel](#) class.

#### Parameters

<i>n_points</i>	The number of points in the modelling time series.
<i>n_years</i>	The number of years being modelled.
<i>diesel_inputs</i>	A structure of <a href="#">Diesel</a> constructor inputs.
<i>time_vec_hrs_ptr</i>	A pointer to the vector containing the modelling time series.

```
663 :
664 Combustion(
665     n_points,
666     n_years,
667     diesel_inputs.combustion_inputs,
668     time_vec_hrs_ptr
669 )
670 {
671     // 1. check inputs
672     this->__checkInputs(diesel_inputs);
673

732 } /* Diesel() */

```

#### 4.4.2.3 ~Diesel()

```

Diesel::~Diesel (
    void )

```

Destructor for the [Diesel](#) class.

```

894 {
895     // 1. destruction print
896     if (this->print_flag) {
897         std::cout << "Diesel object at " << this << " destroyed" << std::endl;
898     }
899
900     return;
901 } /* ~Diesel() */

```

### 4.4.3 Member Function Documentation

#### 4.4.3.1 \_\_checkInputs()

```

void Diesel::__checkInputs (
    DieselInputs diesel_inputs ) [private]

```

Helper method to check inputs to the [Diesel](#) constructor.

## Parameters

<i>diesel_inputs</i>	A structure of <a href="#">Diesel</a> constructor inputs.
----------------------	---

```

64 {
65     // 1. check fuel_cost_L
66     if (diesel_inputs.fuel_cost_L < 0) {
67         std::string error_str = "ERROR: Diesel(): ";
68         error_str += "DieselInputs::fuel_cost_L must be >= 0";
69
70         #ifdef _WIN32
71             std::cout << error_str << std::endl;
72         #endif
73
74         throw std::invalid_argument(error_str);
75     }
76
77     // 2. check CO2_emissions_intensity_kgL
78     if (diesel_inputs.CO2_emissions_intensity_kgL < 0) {
79         std::string error_str = "ERROR: Diesel(): ";
80         error_str += "DieselInputs::CO2_emissions_intensity_kgL must be >= 0";
81
82         #ifdef _WIN32
83             std::cout << error_str << std::endl;
84         #endif
85
86         throw std::invalid_argument(error_str);
87     }
88
89     // 3. check CO_emissions_intensity_kgL

```

#### 4.4.3.2 \_\_getGenericCapitalCost()

```

double Diesel::__getGenericCapitalCost (
    void ) [private]

```

Helper method to generate a generic diesel generator capital cost.

This model was obtained by way of surveying an assortment of published diesel generator costs, and then constructing a best fit model. Note that this model expresses cost in terms of Canadian dollars [CAD].

#### Returns

A generic capital cost for the diesel generator [CAD].

```

263 {
264     double capital_cost_per_kW = 1000 * pow(this->capacity_kW, -0.425) + 800;
265
266     return capital_cost_per_kW * this->capacity_kW;
267 } /* __getGenericCapitalCost() */

```

#### 4.4.3.3 `__getGenericFuelIntercept()`

```
double Diesel::__getGenericFuelIntercept (
    void ) [private]
```

Helper method to generate a generic, linearized fuel consumption intercept for a diesel generator.

This model was obtained by way of surveying an assortment of published diesel generator fuel consumption data, and then constructing a best fit model.

Ref: [HOMER \[2023c\]](#)

Ref: [HOMER \[2023d\]](#)

##### Returns

A generic fuel intercept coefficient for the diesel generator [L/kWh].

```
238 {
239     double linear_fuel_intercept_LkWh = 0.0940 * pow(this->capacity_kW, -0.2735);
240
241     return linear_fuel_intercept_LkWh;
242 } /* __getGenericFuelIntercept() */
```

#### 4.4.3.4 `__getGenericFuelSlope()`

```
double Diesel::__getGenericFuelSlope (
    void ) [private]
```

Helper method to generate a generic, linearized fuel consumption slope for a diesel generator.

This model was obtained by way of surveying an assortment of published diesel generator fuel consumption data, and then constructing a best fit model.

Ref: [HOMER \[2023c\]](#)

Ref: [HOMER \[2023e\]](#)

##### Returns

A generic fuel slope for the diesel generator [L/kWh].

```
210 {
211     double linear_fuel_slope_LkWh = 0.4234 * pow(this->capacity_kW, -0.1012);
212
213     return linear_fuel_slope_LkWh;
214 } /* __getGenericFuelSlope() */
```

#### 4.4.3.5 `__getGenericOpMaintCost()`

```
double Diesel::__getGenericOpMaintCost (
    void ) [private]
```

Helper method (private) to generate a generic diesel generator operation and maintenance cost. This is a cost incurred per unit energy produced.

This model was obtained by way of surveying an assortment of published diesel generator costs, and then constructing a best fit model. Note that this model expresses cost in terms of Canadian dollars per kiloWatt-hour production [CAD/kWh].

##### Returns

A generic operation and maintenance cost, per unit energy produced, for the diesel generator [CAD/kWh].

```
291 {
292     double operation_maintenance_cost_kWh = 0.05 * pow(this->capacity_kW, -0.2) + 0.05;
293
294     return operation_maintenance_cost_kWh;
295 } /* __getGenericOpMaintCost() */
```

#### 4.4.3.6 `__handleStartStop()`

```
void Diesel::__handleStartStop (
    int timestep,
    double dt_hrs,
    double production_kW ) [private]
```

Helper method (private) to handle the starting/stopping of the diesel generator. The minimum runtime constraint is enforced in this method.

##### Parameters

<i>timestep</i>	The current time step of the <a href="#">Model</a> run.
<i>dt_hrs</i>	The interval of time [hrs] associated with the action.
<i>production_kW</i>	The current rate of production [kW] of the generator.

```
325 {
326     /*
327     * Helper method (private) to handle the starting/stopping of the diesel
328     * generator. The minimum runtime constraint is enforced in this method.
329     */
330
331     if (this->is_running) {
332         // handle stopping
333         if (
334             production_kW <= 0 and
335             this->time_since_last_start_hrs >= this->minimum_runtime_hrs
336         ) {
337             this->is_running = false;
338         }
339     }
340
341     else {
342         // handle starting
343         if (production_kW > 0) {
344             this->is_running = true;
345             this->n_starts++;
346             this->time_since_last_start_hrs = 0;
347         }
348     }
349 }
```

```

350     return;
351 } /* __handleStartStop() */

```

#### 4.4.3.7 \_\_writeSummary()

```

void Diesel::__writeSummary (
    std::string write_path ) [private], [virtual]

```

Helper method to write summary results for [Diesel](#).

##### Parameters

<i>write_path</i>	A path (either relative or absolute) to the directory location where results are to be written. If already exists, will overwrite.
-------------------	--

Reimplemented from [Combustion](#).

```

370 {
371     // 1. create filestream
372     write_path += "summary_results.md";
373     std::ofstream ofs;

#### 4.4.3.8 \_\_writeTimeSeries()

```

void Diesel::__writeTimeSeries (
    std::string write_path,
    std::vector< double > * time_vec_hrs_ptr,
    int max_lines = -1 ) [private], [virtual]

```

Helper method to write time series results for [Diesel](#).

##### Parameters

<i>write_path</i>	A path (either relative or absolute) to the directory location where results are to be written. If already exists, will overwrite.
<i>time_vec_hrs_ptr</i>	A pointer to the <i>time_vec_hrs</i> attribute of the <a href="#">ElectricalLoad</a> .
<i>max_lines</i>	The maximum number of lines of output to write.

Reimplemented from [Combustion](#).

```

#### 4.4.3.9 commit()

```

double Diesel::commit (
    int timestep,
    double dt_hrs,
    double production_kW,
    double load_kW ) [virtual]

```

Method which takes in production and load for the current timestep, computes and records dispatch and curtailment, and then returns remaining load.

##### Parameters

<i>timestep</i>	The timestep (i.e., time series index) for the request.
<i>dt_hrs</i>	The interval of time [hrs] associated with the timestep.
<i>production_kW</i>	The production [kW] of the asset in this timestep.
<i>load_kW</i>	The load [kW] passed to the asset in this timestep.

##### Returns

The load [kW] remaining after the dispatch is deducted from it.

Reimplemented from [Combustion](#).

```

852 {
853     // 1. handle start/stop, enforce minimum runtime constraint
854     this->__handleStartStop(timestep, dt_hrs, production_kW);
855
856     // 2. invoke base class method
857     load_kW = Combustion::commit(
858         timestep,
859         dt_hrs,
860         production_kW,
861         load_kW
862     );
863
864     if (this->is_running) {
865         // 3. log time since last start
866         this->time_since_last_start_hrs += dt_hrs;
867
868         // 4. correct operation and maintenance costs (should be non-zero if idling)
869         if (production_kW <= 0) {
870             double produced_kWh = 0.01 * this->capacity_kW * dt_hrs;
871
872             double operation_maintenance_cost =
873                 this->operation_maintenance_cost_kWh * produced_kWh;
874             this->operation_maintenance_cost_vec[timestep] = operation_maintenance_cost;
875         }
876     }
877 }

```

```

876     }
877
878     return load_kW;
879 } /* commit() */

```

#### 4.4.3.10 handleReplacement()

```

void Diesel::handleReplacement (
    int timestep ) [virtual]

```

Method to handle asset replacement and capital cost incursion, if applicable.

##### Parameters

<i>timestep</i>	The current time step of the <a href="#">Model</a> run.
-----------------	---

Reimplemented from [Combustion](#).

```

750 {
751     // 1. reset attributes
752     this->time_since_last_start_hrs = 0;
753
754     // 2. invoke base class method
755     Combustion :: handleReplacement (timestep);
756
757     return;
758 } /* __handleReplacement() */

```

#### 4.4.3.11 requestProductionkW()

```

double Diesel::requestProductionkW (
    int timestep,
    double dt_hrs,
    double request_kW ) [virtual]

```

Method which takes in production request, and then returns what the asset can deliver (subject to operating constraints, etc.).

##### Parameters

<i>timestep</i>	The timestep (i.e., time series index) for the request.
<i>dt_hrs</i>	The interval of time [hrs] associated with the timestep.
<i>request_kW</i>	The requested production [kW].

##### Returns

The production [kW] delivered by the diesel generator.

Reimplemented from [Combustion](#).

```

790 {
791     // 0. given production time series override
792     if (this->normalized_production_series_given) {
793         double production_kW = Production :: getProductionkW(timestep);

```

```

794
795     return production_kW;
796 }
797
798 // 1. return on request of zero
799 if (request_kW <= 0) {
800     return 0;
801 }
802
803 double deliver_kW = request_kW;
804
805 // 2. enforce capacity constraint
806 if (deliver_kW > this->capacity_kW) {
807     deliver_kW = this->capacity_kW;
808 }
809
810 // 3. enforce minimum load ratio
811 if (deliver_kW < this->minimum_load_ratio * this->capacity_kW) {
812     deliver_kW = this->minimum_load_ratio * this->capacity_kW;
813 }
814
815 return deliver_kW;
816 } /* requestProductionkW() */

```

## 4.4.4 Member Data Documentation

### 4.4.4.1 minimum\_load\_ratio

```
double Diesel::minimum_load_ratio
```

The minimum load ratio of the asset. That is, when the asset is producing, it must produce at least this ratio of its rated capacity.

### 4.4.4.2 minimum\_runtime\_hrs

```
double Diesel::minimum_runtime_hrs
```

The minimum runtime [hrs] of the asset. This is the minimum time that must elapse between successive starts and stops.

### 4.4.4.3 time\_since\_last\_start\_hrs

```
double Diesel::time_since_last_start_hrs
```

The time that has elapsed [hrs] since the last start of the asset.

The documentation for this class was generated from the following files:

- header/Production/Combustion/[Diesel.h](#)
- source/Production/Combustion/[Diesel.cpp](#)

## 4.5 DieselInputs Struct Reference

A structure which bundles the necessary inputs for the [Diesel](#) constructor. Provides default values for every necessary input. Note that this structure encapsulates [CombustionInputs](#).

```
#include <Diesel.h>
```

Collaboration diagram for DieselInputs:

### Public Attributes

- [CombustionInputs combustion\\_inputs](#)  
An encapsulated [CombustionInputs](#) instance.
- double [replace\\_running\\_hrs](#) = 30000  
The number of running hours after which the asset must be replaced. Overwrites the [ProductionInputs](#) attribute.
- double [capital\\_cost](#) = -1  
The capital cost of the asset (undefined currency). -1 is a sentinel value, which triggers a generic cost model on construction (in fact, any negative value here will trigger). Note that the generic cost model is in terms of Canadian dollars [CAD].
- double [operation\\_maintenance\\_cost\\_kWh](#) = -1  
The operation and maintenance cost of the asset [1/kWh] (undefined currency). This is a cost incurred per unit of energy produced. -1 is a sentinel value, which triggers a generic cost model on construction (in fact, any negative value here will trigger). Note that the generic cost model is in terms of Canadian dollars [CAD/kWh].
- double [fuel\\_cost\\_L](#) = 1.70  
The cost of fuel [1/L] (undefined currency).
- double [minimum\\_load\\_ratio](#) = 0.2  
The minimum load ratio of the asset. That is, when the asset is producing, it must produce at least this ratio of its rated capacity.
- double [minimum\\_runtime\\_hrs](#) = 4  
The minimum runtime [hrs] of the asset. This is the minimum time that must elapse between successive starts and stops.
- double [linear\\_fuel\\_slope\\_LkWh](#) = -1

The slope [L/kWh] to use in computing linearized fuel consumption. This is fuel consumption per unit energy produced. -1 is a sentinel value, which triggers a generic fuel consumption model on construction (in fact, any negative value here will trigger).

- double `linear_fuel_intercept_LkWh` = -1

The intercept [L/kWh] to use in computing linearized fuel consumption. This is fuel consumption per unit energy produced. -1 is a sentinel value, which triggers a generic fuel consumption model on construction (in fact, any negative value here will trigger).

- double `CO2_emissions_intensity_kgL` = 2.7  
Carbon dioxide (CO<sub>2</sub>) emissions intensity [kg/L].
- double `CO_emissions_intensity_kgL` = 0.0178  
Carbon monoxide (CO) emissions intensity [kg/L].
- double `NOx_emissions_intensity_kgL` = 0.0014  
Nitrogen oxide (NO<sub>x</sub>) emissions intensity [kg/L].
- double `SOx_emissions_intensity_kgL` = 0.0042  
Sulfur oxide (SO<sub>x</sub>) emissions intensity [kg/L].
- double `CH4_emissions_intensity_kgL` = 0.0007  
Methane (CH<sub>4</sub>) emissions intensity [kg/L].
- double `PM_emissions_intensity_kgL` = 0.0001  
Particulate Matter (PM) emissions intensity [kg/L].

### 4.5.1 Detailed Description

A structure which bundles the necessary inputs for the [Diesel](#) constructor. Provides default values for every necessary input. Note that this structure encapsulates [CombustionInputs](#).

### 4.5.2 Member Data Documentation

#### 4.5.2.1 `capital_cost`

```
double DieselInputs::capital_cost = -1
```

The capital cost of the asset (undefined currency). -1 is a sentinel value, which triggers a generic cost model on construction (in fact, any negative value here will trigger). Note that the generic cost model is in terms of Canadian dollars [CAD].

#### 4.5.2.2 `CH4_emissions_intensity_kgL`

```
double DieselInputs::CH4_emissions_intensity_kgL = 0.0007
```

Methane (CH<sub>4</sub>) emissions intensity [kg/L].

#### 4.5.2.3 CO2\_emissions\_intensity\_kgL

```
double DieselInputs::CO2_emissions_intensity_kgL = 2.7
```

Carbon dioxide (CO2) emissions intensity [kg/L].

#### 4.5.2.4 CO\_emissions\_intensity\_kgL

```
double DieselInputs::CO_emissions_intensity_kgL = 0.0178
```

Carbon monoxide (CO) emissions intensity [kg/L].

#### 4.5.2.5 combustion\_inputs

```
CombustionInputs DieselInputs::combustion_inputs
```

An encapsulated [CombustionInputs](#) instance.

#### 4.5.2.6 fuel\_cost\_L

```
double DieselInputs::fuel_cost_L = 1.70
```

The cost of fuel [1/L] (undefined currency).

#### 4.5.2.7 linear\_fuel\_intercept\_LkWh

```
double DieselInputs::linear_fuel_intercept_LkWh = -1
```

The intercept [L/kWh] to use in computing linearized fuel consumption. This is fuel consumption per unit energy produced. -1 is a sentinel value, which triggers a generic fuel consumption model on construction (in fact, any negative value here will trigger).

#### 4.5.2.8 linear\_fuel\_slope\_LkWh

```
double DieselInputs::linear_fuel_slope_LkWh = -1
```

The slope [L/kWh] to use in computing linearized fuel consumption. This is fuel consumption per unit energy produced. -1 is a sentinel value, which triggers a generic fuel consumption model on construction (in fact, any negative value here will trigger).

#### 4.5.2.9 minimum\_load\_ratio

```
double DieselInputs::minimum_load_ratio = 0.2
```

The minimum load ratio of the asset. That is, when the asset is producing, it must produce at least this ratio of its rated capacity.

#### 4.5.2.10 minimum\_runtime\_hrs

```
double DieselInputs::minimum_runtime_hrs = 4
```

The minimum runtime [hrs] of the asset. This is the minimum time that must elapse between successive starts and stops.

#### 4.5.2.11 NOx\_emissions\_intensity\_kgL

```
double DieselInputs::NOx_emissions_intensity_kgL = 0.0014
```

Nitrogen oxide (NOx) emissions intensity [kg/L].

#### 4.5.2.12 operation\_maintenance\_cost\_kWh

```
double DieselInputs::operation_maintenance_cost_kWh = -1
```

The operation and maintenance cost of the asset [1/kWh] (undefined currency). This is a cost incurred per unit of energy produced. -1 is a sentinel value, which triggers a generic cost model on construction (in fact, any negative value here will trigger). Note that the generic cost model is in terms of Canadian dollars [CAD/kWh].

#### 4.5.2.13 PM\_emissions\_intensity\_kgL

```
double DieselInputs::PM_emissions_intensity_kgL = 0.0001
```

Particulate Matter (PM) emissions intensity [kg/L].

#### 4.5.2.14 replace\_running\_hrs

```
double DieselInputs::replace_running_hrs = 30000
```

The number of running hours after which the asset must be replaced. Overwrites the [ProductionInputs](#) attribute.

#### 4.5.2.15 SOx\_emissions\_intensity\_kgL

```
double DieselInputs::SOx_emissions_intensity_kgL = 0.0042
```

Sulfur oxide (SOx) emissions intensity [kg/L].

The documentation for this struct was generated from the following file:

## 4.6 ElectricalLoad Class Reference

A class which contains time and electrical load data. Intended to serve as a component class of [Model](#).

```
#include <ElectricalLoad.h>
```

### Public Member Functions

- [ElectricalLoad](#) (void)  
*Constructor (dummy) for the [ElectricalLoad](#) class.*
- [ElectricalLoad](#) (std::string)  
*Constructor (intended) for the [ElectricalLoad](#) class.*
- void [readLoadData](#) (std::string)  
*Method to read electrical load data into an already existing [ElectricalLoad](#) object. Clears and overwrites any existing attribute values.*
- void [clear](#) (void)  
*Method to clear all attributes of the [ElectricalLoad](#) object.*
- [~ElectricalLoad](#) (void)  
*Destructor for the [ElectricalLoad](#) class.*

### Public Attributes

- int [n\\_points](#)  
*The number of points in the modelling time series.*
- double [n\\_years](#)  
*The number of years being modelled (inferred from [time\\_vec\\_hrs](#)).*
- double [min\\_load\\_kW](#)  
*The minimum [kW] of the given electrical load time series.*
- double [mean\\_load\\_kW](#)  
*The mean, or average, [kW] of the given electrical load time series.*
- double [max\\_load\\_kW](#)  
*The maximum [kW] of the given electrical load time series.*
- std::string [path\\_2\\_electrical\\_load\\_time\\_series](#)  
*A string defining the path (either relative or absolute) to the given electrical load time series.*
- std::vector< double > [time\\_vec\\_hrs](#)  
*A vector to hold a given sequence of model times [hrs]. This defines the modelling time series.*
- std::vector< double > [dt\\_vec\\_hrs](#)  
*A vector to hold a sequence of model time deltas [hrs].*
- std::vector< double > [load\\_vec\\_kW](#)  
*A vector to hold a given sequence of electrical load values [kW].*

### 4.6.1 Detailed Description

A class which contains time and electrical load data. Intended to serve as a component class of [Model](#).

### 4.6.2 Constructor & Destructor Documentation

#### 4.6.2.1 ElectricalLoad() [1/2]

```
ElectricalLoad::ElectricalLoad (
    void )
```

Constructor (dummy) for the [ElectricalLoad](#) class.

```
62 {
63     return;
64 } /* ElectricalLoad() */
```

#### 4.6.2.2 ElectricalLoad() [2/2]

```
ElectricalLoad::ElectricalLoad (
    std::string path_2_electrical_load_time_series )
```

Constructor (intended) for the [ElectricalLoad](#) class.

##### Parameters

<i>path_2_electrical_load_time_series</i>	A string defining the path (either relative or absolute) to the given electrical load time series.
---	--

```
82 {
83     this->readLoadData(path_2_electrical_load_time_series);
84
85     return;
86 } /* ElectricalLoad() */
```

#### 4.6.2.3 ~ElectricalLoad()

```
ElectricalLoad::~~ElectricalLoad (
    void )
```

Destructor for the [ElectricalLoad](#) class.

```
209 {
210     this->clear();
211     return;
212 } /* ~ElectricalLoad() */
```

### 4.6.3 Member Function Documentation

### 4.6.3.1 clear()

```
void ElectricalLoad::clear (
    void )
```

Method to clear all attributes of the [ElectricalLoad](#) object.

```
182 {
183     this->n_points = 0;
184     this->n_years = 0;
185     this->min_load_kW = 0;
186     this->mean_load_kW = 0;
187     this->max_load_kW = 0;
188
189     this->path_2_electrical_load_time_series.clear();
190     this->time_vec_hrs.clear();
191     this->dt_vec_hrs.clear();
192     this->load_vec_kW.clear();
193
194     return;
195 } /* clear() */
```

### 4.6.3.2 readLoadData()

```
void ElectricalLoad::readLoadData (
    std::string path_2_electrical_load_time_series )
```

Method to read electrical load data into an already existing [ElectricalLoad](#) object. Clears and overwrites any existing attribute values.

#### Parameters

<i>path_2_electrical_load_time_series</i>	A string defining the path (either relative or absolute) to the given electrical load time series.
---	--

```
104 {
105     // 1. clear
106     this->clear();
107
108     // 2. init CSV reader, record path
109     io::CSVReader<2> CSV(path_2_electrical_load_time_series);
110
111     CSV.read_header(
112         io::ignore_extra_column,
113         "Time (since start of data) [hrs]",
114         "Electrical Load [kW]"
115     );
116
117     this->path_2_electrical_load_time_series = path_2_electrical_load_time_series;
118
119     // 3. read in time and load data, increment n_points, track min and max load
120     double time_hrs = 0;
121     double load_kW = 0;
122     double load_sum_kW = 0;
123
124     this->n_points = 0;
125
126     this->min_load_kW = std::numeric_limits<double>::infinity();
127     this->max_load_kW = -1 * std::numeric_limits<double>::infinity();
128
129     while (CSV.read_row(time_hrs, load_kW)) {
130         this->time_vec_hrs.push_back(time_hrs);
131         this->load_vec_kW.push_back(load_kW);
132
133         load_sum_kW += load_kW;
134
135         this->n_points++;
136
137         if (this->min_load_kW > load_kW) {
138             this->min_load_kW = load_kW;
139         }
140     }
```

```

141         if (this->max_load_kW < load_kW) {
142             this->max_load_kW = load_kW;
143         }
144     }
145
146     // 4. compute mean load
147     this->mean_load_kW = load_sum_kW / this->n_points;
148
149     // 5. set number of years (assuming 8,760 hours per year)
150     this->n_years = this->time_vec_hrs[this->n_points - 1] / 8760;
151
152     // 6. populate dt_vec_hrs
153     this->dt_vec_hrs.resize(n_points, 0);
154
155     for (int i = 0; i < n_points; i++) {
156         if (i == n_points - 1) {
157             this->dt_vec_hrs[i] = this->dt_vec_hrs[i - 1];
158         }
159         else {
160             double dt_hrs = this->time_vec_hrs[i + 1] - this->time_vec_hrs[i];
161             this->dt_vec_hrs[i] = dt_hrs;
162         }
163     }
164
165     }
166
167     return;
168 } /* readLoadData() */

```

## 4.6.4 Member Data Documentation

### 4.6.4.1 dt\_vec\_hrs

```
std::vector<double> ElectricalLoad::dt_vec_hrs
```

A vector to hold a sequence of model time deltas [hrs].

### 4.6.4.2 load\_vec\_kW

```
std::vector<double> ElectricalLoad::load_vec_kW
```

A vector to hold a given sequence of electrical load values [kW].

### 4.6.4.3 max\_load\_kW

```
double ElectricalLoad::max_load_kW
```

The maximum [kW] of the given electrical load time series.

#### 4.6.4.4 mean\_load\_kW

```
double ElectricalLoad::mean_load_kW
```

The mean, or average, [kW] of the given electrical load time series.

#### 4.6.4.5 min\_load\_kW

```
double ElectricalLoad::min_load_kW
```

The minimum [kW] of the given electrical load time series.

#### 4.6.4.6 n\_points

```
int ElectricalLoad::n_points
```

The number of points in the modelling time series.

#### 4.6.4.7 n\_years

```
double ElectricalLoad::n_years
```

The number of years being modelled (inferred from time\_vec\_hrs).

#### 4.6.4.8 path\_2\_electrical\_load\_time\_series

```
std::string ElectricalLoad::path_2_electrical_load_time_series
```

A string defining the path (either relative or absolute) to the given electrical load time series.

#### 4.6.4.9 time\_vec\_hrs

```
std::vector<double> ElectricalLoad::time_vec_hrs
```

A vector to hold a given sequence of model times [hrs]. This defines the modelling time series.

The documentation for this class was generated from the following files:

- header/[ElectricalLoad.h](#)
- source/[ElectricalLoad.cpp](#)

## 4.7 Emissions Struct Reference

A structure which bundles the emitted masses of various emissions chemistries.

```
#include <Combustion.h>
```

### Public Attributes

- double `CO2_kg` = 0  
*The mass of carbon dioxide (CO2) emitted [kg].*
- double `CO_kg` = 0  
*The mass of carbon monoxide (CO) emitted [kg].*
- double `NOx_kg` = 0  
*The mass of nitrogen oxides (NOx) emitted [kg].*
- double `SOx_kg` = 0  
*The mass of sulfur oxides (SOx) emitted [kg].*
- double `CH4_kg` = 0  
*The mass of methane (CH4) emitted [kg].*
- double `PM_kg` = 0  
*The mass of particulate matter (PM) emitted [kg].*

### 4.7.1 Detailed Description

A structure which bundles the emitted masses of various emissions chemistries.

### 4.7.2 Member Data Documentation

#### 4.7.2.1 CH4\_kg

```
double Emissions::CH4_kg = 0
```

The mass of methane (CH4) emitted [kg].

#### 4.7.2.2 CO2\_kg

```
double Emissions::CO2_kg = 0
```

The mass of carbon dioxide (CO2) emitted [kg].

#### 4.7.2.3 CO\_kg

```
double Emissions::CO_kg = 0
```

The mass of carbon monoxide (CO) emitted [kg].

#### 4.7.2.4 NOx\_kg

```
double Emissions::NOx_kg = 0
```

The mass of nitrogen oxides (NOx) emitted [kg].

#### 4.7.2.5 PM\_kg

```
double Emissions::PM_kg = 0
```

The mass of particulate matter (PM) emitted [kg].

#### 4.7.2.6 SOx\_kg

```
double Emissions::SOx_kg = 0
```

The mass of sulfur oxides (SOx) emitted [kg].

## Public Member Functions

- [Hydro](#) (void)  
*Constructor (dummy) for the [Hydro](#) class.*
- [Hydro](#) (int, double, [HydroInputs](#), std::vector< double > \*)  
*Constructor (intended) for the [Hydro](#) class.*
- void [handleReplacement](#) (int)  
*Method to handle asset replacement and capital cost incursion, if applicable.*
- double [requestProductionkW](#) (int, double, double, double)  
*Method which takes in production request, and then returns what the asset can deliver (subject to operating constraints, etc.).*
- double [commit](#) (int, double, double, double, double)  
*Method which takes in production and load for the current timestep, computes and records dispatch and curtailment, and then returns remaining load.*
- [~Hydro](#) (void)  
*Destructor for the [Hydro](#) class.*

## Public Attributes

- [HydroTurbineType](#) turbine\_type  
*The type of hydroelectric turbine model to use.*
- double [fluid\\_density\\_kgm3](#)  
*The density [kg/m3] of the hydroelectric working fluid.*
- double [net\\_head\\_m](#)  
*The net head [m] of the asset.*
- double [reservoir\\_capacity\\_m3](#)  
*The capacity [m3] of the hydro reservoir.*
- double [init\\_reservoir\\_state](#)  
*The initial state of the reservoir (where state is volume of stored fluid divided by capacity).*
- double [stored\\_volume\\_m3](#)  
*The volume [m3] of stored fluid.*
- double [minimum\\_power\\_kW](#)  
*The minimum power [kW] that the asset can produce. Corresponds to minimum productive flow.*
- double [minimum\\_flow\\_m3hr](#)  
*The minimum required flow [m3/hr] for the asset to produce. Corresponds to minimum power.*
- double [maximum\\_flow\\_m3hr](#)  
*The maximum productive flow [m3/hr] that the asset can support.*
- std::vector< double > [turbine\\_flow\\_vec\\_m3hr](#)  
*A vector of the turbine flow [m3/hr] at each point in the modelling time series.*
- std::vector< double > [spill\\_rate\\_vec\\_m3hr](#)  
*A vector of the spill rate [m3/hr] at each point in the modelling time series.*
- std::vector< double > [stored\\_volume\\_vec\\_m3](#)  
*A vector of the stored volume [m3] in the reservoir at each point in the modelling time series.*

## Private Member Functions

- void [\\_\\_checkInputs](#) ([HydroInputs](#))  
*Helper method to check inputs to the [Hydro](#) constructor.*
- void [\\_\\_initInterpolator](#) (void)  
*Helper method to set up turbine and generator efficiency interpolation.*
- double [\\_\\_getGenericCapitalCost](#) (void)  
*Helper method to generate a generic hydroelectric capital cost.*
- double [\\_\\_getGenericOpMaintCost](#) (void)  
*Helper method (private) to generate a generic hydroelectric operation and maintenance cost. This is a cost incurred per unit energy produced.*
- double [\\_\\_getEfficiencyFactor](#) (double)  
*Helper method to compute the efficiency factor (product of turbine and generator efficiencies).*
- double [\\_\\_getMinimumFlowm3hr](#) (void)  
*Helper method to compute and return the minimum required flow for production, based on turbine type.*
- double [\\_\\_getMaximumFlowm3hr](#) (void)  
*Helper method to compute and return the maximum productive flow, based on turbine type.*
- double [\\_\\_flowToPower](#) (double)  
*Helper method to translate a given flow into a corresponding power output.*
- double [\\_\\_powerToFlow](#) (double)  
*Helper method to translate a given power output into a corresponding flow.*
- double [\\_\\_getAvailableFlow](#) (double, double)  
*Helper method to determine what flow is currently available to the turbine.*
- double [\\_\\_getAcceptableFlow](#) (double)  
*Helper method to determine what flow is currently acceptable by the reservoir.*
- void [\\_\\_updateState](#) (int, double, double, double)  
*Helper method to update and log flow and reservoir state.*
- void [\\_\\_writeSummary](#) (std::string)  
*Helper method to write summary results for [Hydro](#).*
- void [\\_\\_writeTimeSeries](#) (std::string, std::vector< double > \*, int=-1)  
*Helper method to write time series results for [Hydro](#).*

### 4.8.1 Detailed Description

A derived class of the [Noncombustion](#) branch of [Production](#) which models production using a hydroelectric asset (either with reservoir or not).

### 4.8.2 Constructor & Destructor Documentation

#### 4.8.2.1 [Hydro\(\)](#) [1/2]

```
Hydro::Hydro (
    void )
```

Constructor (dummy) for the [Hydro](#) class.

```
859 {
860     return;
861 } /* Hydro() */
```

## 4.8.2.2 Hydro() [2/2]

```

Hydro::Hydro (
    int n_points,
    double n_years,
    HydroInputs hydro_inputs,
    std::vector< double > * time_vec_hrs_ptr )

```

Constructor (intended) for the [Hydro](#) class.

## Parameters

<i>n_points</i>	The number of points in the modelling time series.
<i>n_years</i>	The number of years being modelled.
<i>hydro_inputs</i>	A structure of <a href="#">Hydro</a> constructor inputs.
<i>time_vec_hrs_ptr</i>	A pointer to the vector containing the modelling time series.

```

893 :
894 Noncombustion(
895     n_points,
896     n_years,
897     hydro_inputs.noncombustion_inputs,
898     time_vec_hrs_ptr
899 )
900 {
901     // 1. check inputs
902     this->__checkInputs(hydro_inputs);
903
904     // 2. set attributes
905     this->type = NoncombustionType :: HYDRO;
906     this->type_str = "HYDRO";
907
908     this->resource_key = hydro_inputs.resource_key;
909
910     this->turbine_type = hydro_inputs.turbine_type;
911
912     this->fluid_density_kgm3 = hydro_inputs.fluid_density_kgm3;
913     this->net_head_m = hydro_inputs.net_head_m;
914
915     this->reservoir_capacity_m3 = hydro_inputs.reservoir_capacity_m3;
916     this->init_reservoir_state = hydro_inputs.init_reservoir_state;
917     this->stored_volume_m3 =
918         hydro_inputs.init_reservoir_state * hydro_inputs.reservoir_capacity_m3;
919
920     this->minimum_power_kW = 0.1 * this->capacity_kW;    // <-- NEED TO DOUBLE CHECK THAT THIS MAKES
SENSE IN GENERAL
921
922     this->__initInterpolator();
923
924     this->minimum_flow_m3hr = this->__getMinimumFlowm3hr();
925     this->maximum_flow_m3hr = this->__getMaximumFlowm3hr();
926
927     this->turbine_flow_vec_m3hr.resize(this->n_points, 0);
928     this->spill_rate_vec_m3hr.resize(this->n_points, 0);
929     this->stored_volume_vec_m3.resize(this->n_points, 0);
930
931     if (hydro_inputs.capital_cost < 0) {
932         this->capital_cost = this->__getGenericCapitalCost();
933     }
934     else {
935         this->capital_cost = hydro_inputs.capital_cost;
936     }
937
938     if (hydro_inputs.operation_maintenance_cost_kWh < 0) {
939         this->operation_maintenance_cost_kWh = this->__getGenericOpMaintCost();
940     }
941     else {
942         this->operation_maintenance_cost_kWh =
943             hydro_inputs.operation_maintenance_cost_kWh;
944     }
945
946     if (not this->is_sunk) {
947         this->capital_cost_vec[0] = this->capital_cost;
948     }
949
950     return;
951 } /* Hydro() */

```

### 4.8.2.3 ~Hydro()

```
Hydro::~~Hydro (
    void )
```

Destructor for the [Hydro](#) class.

```
1125 {
1126     // 1. destruction print
1127     if (this->print_flag) {
1128         std::cout << "Hydro object at " << this << " destroyed" << std::endl;
1129     }
1130
1131     return;
1132 } /* ~Hydro() */
```

## 4.8.3 Member Function Documentation

### 4.8.3.1 \_\_checkInputs()

```
void Hydro::__checkInputs (
    HydroInputs hydro_inputs ) [private]
```

Helper method to check inputs to the [Hydro](#) constructor.

#### Parameters

<i>hydro_inputs</i>	A structure of <a href="#">Hydro</a> constructor inputs.
---------------------	--

```
64 {
65     // 1. check fluid_density_kgm3
66     if (hydro_inputs.fluid_density_kgm3 <= 0) {
67         std::string error_str = "ERROR: Hydro(): fluid_density_kgm3 must be > 0";
68
69         #ifdef _WIN32
70             std::cout << error_str << std::endl;
71         #endif
72
73         throw std::invalid_argument(error_str);
74     }
75
76     // 2. check net_head_m
77     if (hydro_inputs.net_head_m <= 0) {
78         std::string error_str = "ERROR: Hydro(): net_head_m must be > 0";
79
80         #ifdef _WIN32
81             std::cout << error_str << std::endl;
82         #endif
83
84         throw std::invalid_argument(error_str);
85     }
86
87     // 3. check reservoir_capacity_m3
88     if (hydro_inputs.reservoir_capacity_m3 < 0) {
89         std::string error_str = "ERROR: Hydro(): reservoir_capacity_m3 must be >= 0";
90
91         #ifdef _WIN32
92             std::cout << error_str << std::endl;
93         #endif
94
95         throw std::invalid_argument(error_str);
96     }
97 }
```

```

98     // 4. check init_reservoir_state
99     if (
100         hydro_inputs.init_reservoir_state < 0 or
101         hydro_inputs.init_reservoir_state > 1
102     ) {
103         std::string error_str = "ERROR: Hydro(): init_reservoir_state must be in ";
104         error_str += "the closed interval [0, 1]";
105
106         #ifdef _WIN32
107             std::cout << error_str << std::endl;
108         #endif
109
110         throw std::invalid_argument(error_str);
111     }
112
113     return;
114 } /* __checkInputs() */

```

#### 4.8.3.2 \_\_flowToPower()

```

double Hydro::__flowToPower (
    double flow_m3hr ) [private]

```

Helper method to translate a given flow into a corresponding power output.

Ref: [Truelove \[2023b\]](#)

##### Parameters

<i>flow_m3hr</i>	The flow [m3/hr] through the turbine.
------------------	---------------------------------------

##### Returns

The power output [kW] corresponding to a given flow [m3/hr].

```

452 {
453     // 1. return on less than minimum flow
454     if (flow_m3hr < this->minimum_flow_m3hr) {
455         return 0;
456     }
457
458     // 2. interpolate flow to power
459     double power_kW = this->interpolator.interp1D(
460         HydroInterpKeys :: FLOW_TO_POWER_INTERP_KEY,
461         flow_m3hr
462     );
463
464     return power_kW;
465 } /* __flowToPower() */

```

#### 4.8.3.3 \_\_getAcceptableFlow()

```

double Hydro::__getAcceptableFlow (
    double dt_hrs ) [private]

```

Helper method to determine what flow is currently acceptable by the reservoir.

**Parameters**

<i>dt_hrs</i>	The interval of time [hrs] associated with the timestep.
---------------	--

**Returns**

The flow [m3/hr] currently acceptable by the reservoir.

```

554 {
555     // 1. if no reservoir, return
556     if (this->reservoir_capacity_m3 <= 0) {
557         return 0;
558     }
559
560     // 2. compute acceptable based on room in reservoir
561     double acceptable_m3hr = (this->reservoir_capacity_m3 - this->stored_volume_m3) /
562         dt_hrs;
563
564     return acceptable_m3hr;
565 } /* __getAcceptableFlow() */

```

**4.8.3.4 \_\_getAvailableFlow()**

```

double Hydro::__getAvailableFlow (
    double dt_hrs,
    double hydro_resource_m3hr ) [private]

```

Helper method to determine what flow is currently available to the turbine.

**Parameters**

<i>dt_hrs</i>	The interval of time [hrs] associated with the timestep.
<i>hydro_resource_m3hr</i>	The currently available hydro flow resource [m3/hr].

**Returns**

The flow [m3/hr] currently available through the turbine.

```

521 {
522     // 1. init to flow available from stored volume in reservoir
523     double flow_m3hr = this->stored_volume_m3 / dt_hrs;
524
525     // 2. add flow available from resource
526     flow_m3hr += hydro_resource_m3hr;
527
528     // 3. cap at maximum flow
529     if (flow_m3hr > this->maximum_flow_m3hr) {
530         flow_m3hr = this->maximum_flow_m3hr;
531     }
532
533     return flow_m3hr;
534 } /* __getAvailableFlow() */

```

**4.8.3.5 \_\_getEfficiencyFactor()**

```

double Hydro::__getEfficiencyFactor (
    double power_kW ) [private]

```

Helper method to compute the efficiency factor (product of turbine and generator efficiencies).

Ref: [Truelove \[2023b\]](#)

#### Parameters

<code>power_kW</code>	The power requested of the hydro plant.
-----------------------	---

#### Returns

The product of the turbine and generator efficiencies.

```

350 {
351     // 1. return on zero
352     if (power_kW <= 0) {
353         return 0;
354     }
355
356     // 2. compute power ratio (clip to [0, 1])
357     double power_ratio = power_kW / this->capacity_kW;
358
359     if (power_ratio < 0) {
360         power_ratio = 0;
361     }
362
363     else if (power_ratio > 1) {
364         power_ratio = 1;
365     }
366
367
368     // 3. init efficiency factor to the turbine efficiency
369     double efficiency_factor = this->interpolator.interp1D(
370         HydroInterpKeys :: TURBINE_EFFICIENCY_INTERP_KEY,
371         power_ratio
372     );
373
374     // 4. include generator efficiency
375     efficiency_factor *= this->interpolator.interp1D(
376         HydroInterpKeys :: GENERATOR_EFFICIENCY_INTERP_KEY,
377         power_ratio
378     );
379
380     return efficiency_factor;
381 } /* __getEfficiencyFactor() */

```

#### 4.8.3.6 \_\_getGenericCapitalCost()

```

double Hydro::__getGenericCapitalCost (
    void ) [private]

```

Helper method to generate a generic hydroelectric capital cost.

This model was obtained by way of ...

#### Returns

A generic capital cost for the hydroelectric asset [CAD].

```

299 {
300     double capital_cost_per_kW = 1000; //<-- WIP: need something better here!
301
302     return capital_cost_per_kW * this->capacity_kW + 15000000; //<-- WIP: need something better here!
303 } /* __getGenericCapitalCost() */

```

#### 4.8.3.7 `__getGenericOpMaintCost()`

```
double Hydro::__getGenericOpMaintCost (
    void ) [private]
```

Helper method (private) to generate a generic hydroelectric operation and maintenance cost. This is a cost incurred per unit energy produced.

This model was obtained by way of ...

##### Returns

A generic operation and maintenance cost, per unit energy produced, for the hydroelectric asset [CAD/kWh].

```
324 {
325     double operation_maintenance_cost_kWh = 0.05;  //<-- WIP: need something better here!
326
327     return operation_maintenance_cost_kWh;
328 }  /* __getGenericOpMaintCost() */
```

#### 4.8.3.8 `__getMaximumFlowm3hr()`

```
double Hydro::__getMaximumFlowm3hr (
    void ) [private]
```

Helper method to compute and return the maximum productive flow, based on turbine type.

This helper method assumes that the maximum flow is that which is associated with a power ratio of 1.

Ref: [Truelove \[2023b\]](#)

##### Returns

The maximum productive flow [m3/hr].

```
429 {
430     return this->__powerToFlow(this->capacity_kW);
431 }  /* __getMaximumFlowm3hr() */
```

#### 4.8.3.9 `__getMinimumFlowm3hr()`

```
double Hydro::__getMinimumFlowm3hr (
    void ) [private]
```

Helper method to compute and return the minimum required flow for production, based on turbine type.

This helper method assumes that the minimum flow is that which is associated with a power ratio of 0.1. See constructor for initialization of `minimum_power_kW`.

Ref: [Truelove \[2023b\]](#)

##### Returns

The minimum required flow [m3/hr] for production.

```
404 {
405     return this->__powerToFlow(this->minimum_power_kW);
406 }  /* __getMinimumFlowm3hr() */
```

## 4.8.3.10 \_\_initInterpolator()

```
void Hydro::__initInterpolator (
    void ) [private]
```

Helper method to set up turbine and generator efficiency interpolation.

Ref: [Truelove \[2023b\]](#)

```
131 {
132     // 1. set up generator efficiency interpolation
133     InterpolatorStruct1D generator_interp_struct_1D;
134
135     generator_interp_struct_1D.n_points = 12;
136
137     generator_interp_struct_1D.x_vec = {
138         0, 0.1, 0.2, 0.3, 0.4, 0.5,
139         0.6, 0.7, 0.75, 0.8, 0.9, 1
140     };
141
142     generator_interp_struct_1D.min_x = 0;
143     generator_interp_struct_1D.max_x = 1;
144
145     generator_interp_struct_1D.y_vec = {
146         0.000, 0.800, 0.900, 0.913,

#### 4.8.3.11 \_\_powerToFlow()

```

double Hydro::__powerToFlow (
    double power_kW ) [private]

```

Helper method to translate a given power output into a corresponding flow.

Ref: [Truelove \[2023b\]](#)

#### Parameters

<i>power_kW</i>	The power output [kW] of the hydroelectric generator.
-----------------	---

#### Returns

```

486 {
487     // 1. return on zero power
488     if (power_kW <= 0) {
489         return 0;
490     }
491
492     // 2. get efficiency factor
493     double efficiency_factor = this->__getEfficiencyFactor(power_kW);
494
495     // 3. compute flow
496     double flow_m3hr = 3600 * 1000 * power_kW;
497     flow_m3hr /= efficiency_factor * this->fluid_density_kgm3 * 9.81 * this->net_head_m;
498
499     return flow_m3hr;
500 } /* __powerToFlow() */

```

#### 4.8.3.12 \_\_updateState()

```

void Hydro::__updateState (
    int timestep,
    double dt_hrs,
    double production_kW,
    double hydro_resource_m3hr ) [private]

```

Helper method to update and log flow and reservoir state.

#### Parameters

<i>timestep</i>	The timestep (i.e., time series index) for the request.
<i>dt_hrs</i>	The interval of time [hrs] associated with the timestep.
<i>production_kW</i>	The production [kW] of the asset in this timestep.
<i>hydro_resource_m3hr</i>	The currently available hydro flow resource [m3/hr].

```

598 {
599     // 1. get turbine flow, log

635 } /* __updateState() */

```

#### 4.8.3.13 \_\_writeSummary()

```

void Hydro::__writeSummary (
    std::string write_path ) [private], [virtual]

```

Helper method to write summary results for [Hydro](#).

##### Parameters

<i>write_path</i>	A path (either relative or absolute) to the directory location where results are to be written. If already exists, will overwrite.
-------------------	--

Reimplemented from [Noncombustion](#).

```

653 {

#### 4.8.3.14 \_\_writeTimeSeries()

```
void Hydro::__writeTimeSeries (
    std::string write_path,
    std::vector< double > * time_vec_hrs_ptr,
    int max_lines = -1 ) [private], [virtual]
```

Helper method to write time series results for [Hydro](#).

##### Parameters

<i>write_path</i>	A path (either relative or absolute) to the directory location where results are to be written. If already exists, will overwrite.
<i>time_vec_hrs_ptr</i>	A pointer to the <i>time_vec_hrs</i> attribute of the <a href="#">ElectricalLoad</a> .
<i>max_lines</i>	The maximum number of lines of output to write.

Reimplemented from [Noncombustion](#).

```
803 {
804     // 1. create filestream
805     write_path += "time_series_results.csv";
806     std::ofstream ofs;

#### 4.8.3.15 commit()

```
double Hydro::commit (
    int timestep,
    double dt_hrs,
    double production_kW,
    double load_kW,
    double hydro_resource_m3hr ) [virtual]
```

Method which takes in production and load for the current timestep, computes and records dispatch and curtailment, and then returns remaining load.

## Parameters

<i>timestep</i>	The timestep (i.e., time series index) for the request.
<i>dt_hrs</i>	The interval of time [hrs] associated with the timestep.
<i>production_kW</i>	The production [kW] of the asset in this timestep.
<i>load_kW</i>	The load [kW] passed to the asset in this timestep.

## Returns

The load [kW] remaining after the dispatch is deducted from it.

Reimplemented from [Noncombustion](#).

```

1092 {
1093     // 1. invoke base class method
1094     load_kW = Noncombustion :: commit(
1095         timestep,
1096         dt_hrs,
1097         production_kW,
1098         load_kW
1099     );
1100
1101     // 2. update state and record
1102     this->__updateState(
1103         timestep,
1104         dt_hrs,
1105         production_kW,
1106         hydro_resource_m3hr
1107     );
1108
1109     return load_kW;
1110 } /* commit() */

```

## 4.8.3.16 handleReplacement()

```

void Hydro::handleReplacement (
    int timestep ) [virtual]

```

Method to handle asset replacement and capital cost incursion, if applicable.

## Parameters

<i>timestep</i>	The current time step of the <a href="#">Model</a> run.
-----------------	---

Reimplemented from [Noncombustion](#).

```

969 {
970     // 1. reset attributes
971     //...
972
973     // 2. invoke base class method
974     Noncombustion :: handleReplacement(timestep);
975
976     return;
977 } /* __handleReplacement() */

```

## 4.8.3.17 requestProductionkW()

```

double Hydro::requestProductionkW (
    int timestep,

```

```
double dt_hrs,
double request_kW,
double hydro_resource_m3hr ) [virtual]
```

Method which takes in production request, and then returns what the asset can deliver (subject to operating constraints, etc.).

#### Parameters

<i>timestep</i>	The timestep (i.e., time series index) for the request.
<i>dt_hrs</i>	The interval of time [hrs] associated with the timestep.
<i>request_kW</i>	The requested production [kW].
<i>hydro_resource_m3hr</i>	The currently available hydro flow resource [m3/hr].

#### Returns

The production [kW] delivered by the hydro generator.

Reimplemented from [Noncombustion](#).

```
1013 {
1014     // 0. given production time series override
1015     if (this->normalized_production_series_given) {
1016         double production_kW = Production::getProductionkW(timestep);
1017
1018         return production_kW;
1019     }
1020
1021     // 1. return on request of zero
1022     if (request_kW <= 0) {
1023         return 0;
1024     }
1025
1026     // 2. if request is less than minimum power, set to minimum power
1027     if (request_kW < this->minimum_power_kW) {
1028         request_kW = this->minimum_power_kW;
1029     }
1030
1031     // 3. check available flow, return if less than minimum flow
1032     double available_flow_m3hr = this->__getAvailableFlow(dt_hrs, hydro_resource_m3hr);
1033
1034     if (available_flow_m3hr < this->minimum_flow_m3hr) {
1035         return 0;
1036     }
1037
1038     // 4. init production to request, enforce capacity constraint (which also accounts
1039     //     for maximum flow constraint).
1040     double production_kW = request_kW;
1041
1042     if (production_kW > this->capacity_kW) {

1052     }
1053
1054     return production_kW;
1055 } /* requestProductionkW() */
```

## 4.8.4 Member Data Documentation

#### 4.8.4.1 fluid\_density\_kgm3

```
double Hydro::fluid_density_kgm3
```

The density [kg/m3] of the hydroelectric working fluid.

#### 4.8.4.2 init\_reservoir\_state

```
double Hydro::init_reservoir_state
```

The initial state of the reservoir (where state is volume of stored fluid divided by capacity).

#### 4.8.4.3 maximum\_flow\_m3hr

```
double Hydro::maximum_flow_m3hr
```

The maximum productive flow [m3/hr] that the asset can support.

#### 4.8.4.4 minimum\_flow\_m3hr

```
double Hydro::minimum_flow_m3hr
```

The minimum required flow [m3/hr] for the asset to produce. Corresponds to minimum power.

#### 4.8.4.5 minimum\_power\_kW

```
double Hydro::minimum_power_kW
```

The minimum power [kW] that the asset can produce. Corresponds to minimum productive flow.

#### 4.8.4.6 net\_head\_m

```
double Hydro::net_head_m
```

The net head [m] of the asset.

#### 4.8.4.7 reservoir\_capacity\_m3

```
double Hydro::reservoir_capacity_m3
```

The capacity [m3] of the hydro reservoir.

#### 4.8.4.8 spill\_rate\_vec\_m3hr

```
std::vector<double> Hydro::spill_rate_vec_m3hr
```

A vector of the spill rate [m3/hr] at each point in the modelling time series.

#### 4.8.4.9 stored\_volume\_m3

```
double Hydro::stored_volume_m3
```

The volume [m3] of stored fluid.

#### 4.8.4.10 stored\_volume\_vec\_m3

```
std::vector<double> Hydro::stored_volume_vec_m3
```

A vector of the stored volume [m3] in the reservoir at each point in the modelling time series.

#### 4.8.4.11 turbine\_flow\_vec\_m3hr

```
std::vector<double> Hydro::turbine_flow_vec_m3hr
```

A vector of the turbine flow [m3/hr] at each point in the modelling time series.

#### 4.8.4.12 turbine\_type

```
HydroTurbineType Hydro::turbine_type
```

The type of hydroelectric turbine model to use.

The documentation for this class was generated from the following files:

- [header/Production/Noncombustion/Hydro.h](#)
- [source/Production/Noncombustion/Hydro.cpp](#)

## 4.9 HydroInputs Struct Reference

A structure which bundles the necessary inputs for the [Hydro](#) constructor. Provides default values for every necessary input. Note that this structure encapsulates [NoncombustionInputs](#).

```
#include <Hydro.h>
```

Collaboration diagram for HydroInputs:

### Public Attributes

- [NoncombustionInputs](#) `noncombustion_inputs`  
An encapsulated [NoncombustionInputs](#) instance.
- int `resource_key` = 0  
A key used to index into the [Resources](#) object, to associate this asset with the appropriate resource time series.
- double `capital_cost` = -1  
The capital cost of the asset (undefined currency). -1 is a sentinel value, which triggers a generic cost model on construction (in fact, any negative value here will trigger). Note that the generic cost model is in terms of Canadian dollars [CAD].
- double `operation_maintenance_cost_kWh` = -1  
The operation and maintenance cost of the asset [1/kWh] (undefined currency). This is a cost incurred per unit of energy produced. -1 is a sentinel value, which triggers a generic cost model on construction (in fact, any negative value here will trigger). Note that the generic cost model is in terms of Canadian dollars [CAD/kWh].
- double `fluid_density_kgm3` = 1000  
The density [kg/m3] of the hydroelectric working fluid.
- double `net_head_m` = 500  
The net head [m] of the asset.
- double `reservoir_capacity_m3` = 0  
The capacity [m3] of the hydro reservoir.
- double `init_reservoir_state` = 0  
The initial state of the reservoir (where state is volume of stored fluid divided by capacity).
- [HydroTurbineType](#) `turbine_type` = [HydroTurbineType](#) :: `HYDRO_TURBINE_PELTON`  
The type of hydroelectric turbine model to use.

### 4.9.1 Detailed Description

A structure which bundles the necessary inputs for the [Hydro](#) constructor. Provides default values for every necessary input. Note that this structure encapsulates [NoncombustionInputs](#).

### 4.9.2 Member Data Documentation

#### 4.9.2.1 capital\_cost

```
double HydroInputs::capital_cost = -1
```

The capital cost of the asset (undefined currency). -1 is a sentinel value, which triggers a generic cost model on construction (in fact, any negative value here will trigger). Note that the generic cost model is in terms of Canadian dollars [CAD].

#### 4.9.2.2 fluid\_density\_kgm3

```
double HydroInputs::fluid_density_kgm3 = 1000
```

The density [kg/m3] of the hydroelectric working fluid.

#### 4.9.2.3 init\_reservoir\_state

```
double HydroInputs::init_reservoir_state = 0
```

The initial state of the reservoir (where state is volume of stored fluid divided by capacity).

#### 4.9.2.4 net\_head\_m

```
double HydroInputs::net_head_m = 500
```

The net head [m] of the asset.

#### 4.9.2.5 noncombustion\_inputs

```
NoncombustionInputs HydroInputs::noncombustion_inputs
```

An encapsulated [NoncombustionInputs](#) instance.

#### 4.9.2.6 operation\_maintenance\_cost\_kWh

```
double HydroInputs::operation_maintenance_cost_kWh = -1
```

The operation and maintenance cost of the asset [1/kWh] (undefined currency). This is a cost incurred per unit of energy produced. -1 is a sentinel value, which triggers a generic cost model on construction (in fact, any negative value here will trigger). Note that the generic cost model is in terms of Canadian dollars [CAD/kWh].

#### 4.9.2.7 reservoir\_capacity\_m3

```
double HydroInputs::reservoir_capacity_m3 = 0
```

The capacity [m3] of the hydro reservoir.

#### 4.9.2.8 resource\_key

```
int HydroInputs::resource_key = 0
```

A key used to index into the [Resources](#) object, to associate this asset with the appropriate resource time series.

#### 4.9.2.9 turbine\_type

```
HydroTurbineType HydroInputs::turbine_type = HydroTurbineType :: HYDRO_TURBINE_PELTON
```

The type of hydroelectric turbine model to use.

## 4.10 Interpolator Class Reference

A class which contains interpolation data and functionality. Intended to serve as a component of the [Production](#) and [Storage](#) hierarchies.

```
#include <Interpolator.h>
```

## Public Member Functions

- [Interpolator](#) (void)  
*Constructor for the [Interpolator](#) class.*
- void [addData1D](#) (int, std::string)  
*Method to add 1D interpolation data to the [Interpolator](#).*
- void [addData2D](#) (int, std::string)  
*Method to add 2D interpolation data to the [Interpolator](#).*
- double [interp1D](#) (int, double)  
*Method to perform a 1D interpolation.*
- double [interp2D](#) (int, double, double)  
*Method to perform a 2D interpolation.*
- [~Interpolator](#) (void)  
*Destructor for the [Interpolator](#) class.*

## Public Attributes

- std::map< int, [InterpolatorStruct1D](#) > [interp\\_map\\_1D](#)  
*A map <int, [InterpolatorStruct1D](#)> of given 1D interpolation data.*
- std::map< int, std::string > [path\\_map\\_1D](#)  
*A map <int, string> of the paths (either relative or absolute) to the given 1D interpolation data.*
- std::map< int, [InterpolatorStruct2D](#) > [interp\\_map\\_2D](#)  
*A map <int, [InterpolatorStruct2D](#)> of given 2D interpolation data.*
- std::map< int, std::string > [path\\_map\\_2D](#)  
*A map <int, string> of the paths (either relative or absolute) to the given 2D interpolation data.*

## Private Member Functions

- void [\\_\\_checkDataKey1D](#) (int)  
*Helper method to check if given data key (1D) is already in use.*
- void [\\_\\_checkDataKey2D](#) (int)  
*Helper method to check if given data key (2D) is already in use.*
- void [\\_\\_checkBounds1D](#) (int, double)  
*Helper method to check that the given 1D interpolation value is contained within the given corresponding data domain. Also checks that the data key has been registered.*
- void [\\_\\_checkBounds2D](#) (int, double, double)  
*Helper method to check that the given 2D interpolation value is contained within the given corresponding data domain. Also checks that the data key has been registered.*
- void [\\_\\_throwReadError](#) (std::string, int)  
*Helper method to throw a read error whenever non-numeric data is encountered where only numeric data should be.*
- bool [\\_\\_isNonNumeric](#) (std::string)  
*Helper method to determine if given string is non-numeric (i.e., contains.*
- int [\\_\\_getInterpolationIndex](#) (double, std::vector< double > \*)  
*Helper method to get appropriate interpolation index into given vector.*
- std::vector< std::string > [\\_\\_splitCommaSeparatedString](#) (std::string, std::string="|")  
*Helper method to split a comma-separated string into a vector of substrings.*
- std::vector< std::vector< std::string > > [\\_\\_getDataStringMatrix](#) (std::string)
- void [\\_\\_readData1D](#) (int, std::string)  
*Helper method to read the given 1D interpolation data into [Interpolator](#).*
- void [\\_\\_readData2D](#) (int, std::string)  
*Helper method to read the given 2D interpolation data into [Interpolator](#).*

### 4.10.1 Detailed Description

A class which contains interpolation data and functionality. Intended to serve as a component of the [Production](#) and [Storage](#) hierarchies.

### 4.10.2 Constructor & Destructor Documentation

#### 4.10.2.1 Interpolator()

```
Interpolator::Interpolator (
    void )
```

Constructor for the [Interpolator](#) class.

```
707 {
708     //...
709
710     return;
711 } /* Interpolator() */
```

#### 4.10.2.2 ~Interpolator()

```
Interpolator::~Interpolator (
    void )
```

Destructor for the [Interpolator](#) class.

```
893 {
894     //...
895
896     return;
897 } /* ~Interpolator() */
```

### 4.10.3 Member Function Documentation

#### 4.10.3.1 \_\_checkBounds1D()

```
void Interpolator::__checkBounds1D (
    int data_key,
    double interp_x ) [private]
```

Helper method to check that the given 1D interpolation value is contained within the given corresponding data domain. Also checks that the data key has been registered.

#### Parameters

<i>data_key</i>	A key associated with the given interpolation data.
<i>interp</i> $\leftrightarrow$	The query value to be interpolated.
Generated by Doxygen	

```

133 {
134     // 1. key error
135     if (this->interp_map_1D.count(data_key) == 0) {

```

#### 4.10.3.3 \_\_checkDataKey1D()

```

void Interpolator::__checkDataKey1D (
    int data_key ) [private]

```

Helper method to check if given data key (1D) is already in use.

##### Parameters

<i>data_key</i>	The key associated with the given 1D interpolation data.
-----------------	--

```

65 {
66     if (this->interp_map_1D.count(data_key) > 0) {
67         std::string error_str = "ERROR: Interpolator::addData1D() ";
68         error_str += "data key (1D) ";
69         error_str += std::to_string(data_key);
70         error_str += " is already in use";
71
72         #ifdef _WIN32
73             std::cout << error_str << std::endl;
74         #endif
75
76         throw std::invalid_argument(error_str);
77     }
78
79     return;
80 } /* __checkDataKey1D() */

```

#### 4.10.3.4 \_\_checkDataKey2D()

```
void Interpolator::__checkDataKey2D (
    int data_key ) [private]
```

Helper method to check if given data key (2D) is already in use.

##### Parameters

<i>data_key</i>	The key associated with the given 2D interpolation data.
-----------------	--

```
97 {
98     if (this->interp_map_2D.count(data_key) > 0) {
99         std::string error_str = "ERROR: Interpolator::addData2D() ";
100         error_str += "data key (2D) ";
101         error_str += std::to_string(data_key);
102         error_str += " is already in use";
103
104         #ifdef _WIN32
105             std::cout << error_str << std::endl;
106         #endif
107
108         throw std::invalid_argument(error_str);
109     }
110
111     return;
112 } /* __checkDataKey2D() */
```

#### 4.10.3.5 \_\_getDataStringMatrix()

```
std::vector< std::vector< std::string > > Interpolator::__getDataStringMatrix (
    std::string path_2_data ) [private]
```

```
426 {
427     // 1. create input file stream
428     std::ifstream ifs;
429     ifs.open(path_2_data);
430
431     // 2. check that open() worked
432     if (not ifs.is_open()) {
433         std::string error_str = "ERROR: Interpolator::__getDataStringMatrix() ";
434         error_str += " failed to open ";
435         error_str += path_2_data;
436
437         #ifdef _WIN32
438             std::cout << error_str << std::endl;
439         #endif
440
441         throw std::invalid_argument(error_str);
442     }
443
444     // 3. read file line by line
445     bool is_header = true;
446     std::string line;
447     std::vector<std::string> line_split_vec;
448     std::vector<std::vector<std::string>> string_matrix;
449
450     while (not ifs.eof()) {
451         std::getline(ifs, line);
452
453         if (is_header) {
454             is_header = false;
455             continue;
456         }
457
458         line_split_vec = this->__splitCommaSeparatedString(line);
459
460         if (not line_split_vec.empty()) {
461             string_matrix.push_back(line_split_vec);
462         }
463     }
464
465     ifs.close();
466     return string_matrix;
467 } /* __getDataStringMatrix() */
```

#### 4.10.3.6 `__getInterpolationIndex()`

```
int Interpolator::__getInterpolationIndex (
    double interp_x,
    std::vector< double > * x_vec_ptr ) [private]
```

Helper method to get appropriate interpolation index into given vector.

##### Parameters

<i>interp_x</i>	The query value to be interpolated.
<i>x_vec_ptr</i>	A pointer to the given vector of interpolation data.

##### Returns

The appropriate interpolation index into the given vector.

```
343 {
344     int idx = 0;
345     while (
346         not (interp_x >= x_vec_ptr->at(idx) and interp_x <= x_vec_ptr->at(idx + 1))
347     ) {
348         idx++;
349     }
350
351     return idx;
352 } /* __getInterpolationIndex() */
```

#### 4.10.3.7 `__isNonNumeric()`

```
bool Interpolator::__isNonNumeric (
    std::string str ) [private]
```

Helper method to determine if given string is non-numeric (i.e., contains.

##### Parameters

<i>str</i>	The string being tested.
------------	--------------------------

##### Returns

A boolean indicating if the given string is non-numeric.

```
308 {
309     for (size_t i = 0; i < str.size(); i++) {;
310         if (isalpha(str[i])) {
311             return true;
312         }
313     }
314
315     return false;
316 } /* __isAlpha() */
```

#### 4.10.3.8 \_\_readData1D()

```
void Interpolator::__readData1D (
    int data_key,
    std::string path_2_data ) [private]
```

Helper method to read the given 1D interpolation data into [Interpolator](#).

##### Parameters

<i>data_key</i>	A key associated with the given interpolation data.
<i>path_2_data</i>	The path (either relative or absolute) to the given interpolation data.

```
487 {
488     // 1. get string matrix
489     std::vector<std::vector<std::string>> string_matrix =
490         this->__getDataStringMatrix(path_2_data);
491
492     // 2. read string matrix contents into 1D interpolation struct
493     InterpolatorStruct1D interp_struct_1D;
494
495     interp_struct_1D.n_points = string_matrix.size();
496     interp_struct_1D.x_vec.resize(interp_struct_1D.n_points, 0);
497     interp_struct_1D.y_vec.resize(interp_struct_1D.n_points, 0);
498
499     for (int i = 0; i < interp_struct_1D.n_points; i++) {
500         try {
501             interp_struct_1D.x_vec[i] = std::stod(string_matrix[i][0]);
502             interp_struct_1D.y_vec[i] = std::stod(string_matrix[i][1]);
503         }
504
505         catch (...) {
506             this->__throwReadError(path_2_data, 1);
507         }
508     }
509
510     interp_struct_1D.min_x = interp_struct_1D.x_vec[0];
511     interp_struct_1D.max_x = interp_struct_1D.x_vec[interp_struct_1D.n_points - 1];
512
513     // 3. write struct to map
514     this->interp_map_1D.insert(
515         std::pair<int, InterpolatorStruct1D>(data_key, interp_struct_1D)
516     );
517
518     /*
519     // ==== TEST PRINT ==== //

## 4.10.3.9 \_\_readData2D()

```
void Interpolator::__readData2D (
    int data_key,
    std::string path_2_data ) [private]
```

Helper method to read the given 2D interpolation data into [Interpolator](#).

## Parameters

<i>data_key</i>	A key associated with the given interpolation data.
<i>path_2_data</i>	The path (either relative or absolute) to the given interpolation data.

```
571 {
572     // 1. get string matrix
573     std::vector<std::vector<std::string>> string_matrix =
574         this->__getDataStringMatrix(path_2_data);
575
576     // 2. read string matrix contents into 2D interpolation map
577     InterpolatorStruct2D interp_struct_2D;
578
579     interp_struct_2D.n_rows = string_matrix.size() - 1;
580     interp_struct_2D.n_cols = string_matrix[0].size() - 1;
581
582     interp_struct_2D.x_vec.resize(interp_struct_2D.n_cols, 0);
583     interp_struct_2D.y_vec.resize(interp_struct_2D.n_rows, 0);
584
585     interp_struct_2D.z_matrix.resize(interp_struct_2D.n_rows, {});
586
587     for (int i = 0; i < interp_struct_2D.n_rows; i++) {
588         interp_struct_2D.z_matrix[i].resize(interp_struct_2D.n_cols, 0);
589     }
590
591     for (size_t i = 1; i < string_matrix[0].size(); i++) {

```

#### 4.10.3.10 \_\_splitCommaSeparatedString()

```

std::vector< std::string > Interpolator::__splitCommaSeparatedString (
    std::string str,
    std::string break_str = "|" ) [private]

```

Helper method to split a comma-separated string into a vector of substrings.

##### Parameters

<i>str</i>	The string to be split.
<i>break_str</i>	A string which triggers the function to break. What has been split up to the point of the break is then returned.

##### Returns

A vector of substrings, which follows from splitting the given string in a comma separated manner.

```

381 {
382     std::vector<std::string> str_split_vec;
383
384     size_t idx = 0;
385     std::string substr;
386
387     while ((idx = str.find(',', ' ')) != std::string::npos) {
388         substr = str.substr(0, idx);
389
390         if (substr == break_str) {
391             break;
392         }
393
394         str_split_vec.push_back(substr);
395
396         str.erase(0, idx + 1);
397     }
398
399     return str_split_vec;
400 } /* __splitCommaSeparatedString() */

```

#### 4.10.3.11 \_\_throwReadError()

```

void Interpolator::__throwReadError (
    std::string path_2_data,
    int dimensions ) [private]

```

Helper method to throw a read error whenever non-numeric data is encountered where only numeric data should be.

##### Parameters

<i>path_2_data</i>	The path (either relative or absolute) to the given interpolation data.
<i>dimensions</i>	The dimensionality of the data being read.

```

272 {
273     std::string error_str = "ERROR: Interpolator::addData";
274     error_str += std::to_string(dimensions);
275     error_str += "D() ";
276     error_str += " failed to read ";
277     error_str += path_2_data;
278     error_str += " (this is probably a std::stod() error; is there non-numeric ";
279     error_str += "data where only numeric data should be?)";
280
281     #ifdef _WIN32
282         std::cout << error_str << std::endl;
283     #endif
284
285     throw std::runtime_error(error_str);
286
287     return;
288 } /* __throwReadError() */

```

#### 4.10.3.12 addData1D()

```

void Interpolator::addData1D (
    int data_key,
    std::string path_2_data )

```

Method to add 1D interpolation data to the [Interpolator](#).

## Parameters

<i>data_key</i>	A key used to index into the <a href="#">Interpolator</a> .
<i>path_2_data</i>	A path (either relative or absolute) to the given 1D interpolation data.

```

731 {
732     // 1. check key
733     this->__checkDataKey1D(data_key);
734
735     // 2. read data into map
736     this->__readData1D(data_key, path_2_data);
737
738     // 3. record path
739     this->path_map_1D.insert(std::pair<int, std::string>(data_key, path_2_data));
740
741     return;
742 } /* addData1D() */

```

**4.10.3.13 addData2D()**

```

void Interpolator::addData2D (
    int data_key,
    std::string path_2_data )

```

Method to add 2D interpolation data to the [Interpolator](#).

## Parameters

<i>data_key</i>	A key used to index into the <a href="#">Interpolator</a> .
<i>path_2_data</i>	A path (either relative or absolute) to the given 2D interpolation data.

```

762 {
763     // 1. check key
764     this->__checkDataKey2D(data_key);
765
766     // 2. read data into map
767     this->__readData2D(data_key, path_2_data);
768
769     // 3. record path
770     this->path_map_2D.insert(std::pair<int, std::string>(data_key, path_2_data));
771
772     return;
773 } /* addData2D() */

```

**4.10.3.14 interp1D()**

```

double Interpolator::interp1D (
    int data_key,
    double interp_x )

```

Method to perform a 1D interpolation.

## Parameters

<i>data_key</i>	A key used to index into the <a href="#">Interpolator</a> .
<i>interp_x</i>	The query value to be interpolated. If this value is outside the domain of the associated interpolation data, then an error will occur.

**Returns**

An interpolation of the given query value.

```

795 {
796     // 1. check bounds
797     this->__checkBounds1D(data_key, interp_x);
798
799     // 2. get interpolation index
800     int idx = this->__getInterpolationIndex(
801         interp_x,
802         &(this->interp_map_1D[data_key].x_vec)
803     );
804
805     // 3. perform interpolation
806     double x_0 = this->interp_map_1D[data_key].x_vec[idx];
807     double x_1 = this->interp_map_1D[data_key].x_vec[idx + 1];
808
809     double y_0 = this->interp_map_1D[data_key].y_vec[idx];
810     double y_1 = this->interp_map_1D[data_key].y_vec[idx + 1];
811
812     double interp_y = ((y_1 - y_0) / (x_1 - x_0)) * (interp_x - x_0) + y_0;
813
814     return interp_y;
815 } /* interp1D() */

```

**4.10.3.15 interp2D()**

```

double Interpolator::interp2D (
    int data_key,
    double interp_x,
    double interp_y )

```

Method to perform a 2D interpolation.

**Parameters**

<i>data_key</i>	A key used to index into the <a href="#">Interpolator</a> .
<i>interp_x</i>	The first query value to be interpolated. If this value is outside the domain of the associated interpolation data, then an error will occur.
<i>interp_y</i>	The second query value to be interpolated. If this value is outside the domain of the associated interpolation data, then an error will occur.

**Returns**

An interpolation of the given query values.

```

840 {
841     // 1. check bounds
842     this->__checkBounds2D(data_key, interp_x, interp_y);
843
844     // 2. get interpolation indices
845     int idx_x = this->__getInterpolationIndex(
846         interp_x,
847         &(this->interp_map_2D[data_key].x_vec)
848     );
849
850     int idx_y = this->__getInterpolationIndex(
851         interp_y,
852         &(this->interp_map_2D[data_key].y_vec)
853     );
854
855     // 3. perform first horizontal interpolation
856     double x_0 = this->interp_map_2D[data_key].x_vec[idx_x];
857     double x_1 = this->interp_map_2D[data_key].x_vec[idx_x + 1];
858
859     double z_0 = this->interp_map_2D[data_key].z_matrix[idx_y][idx_x];
860     double z_1 = this->interp_map_2D[data_key].z_matrix[idx_y][idx_x + 1];

```

```

861
862     double interp_z_0 = ((z_1 - z_0) / (x_1 - x_0)) * (interp_x - x_0) + z_0;
863
864     // 4. perform second horizontal interpolation
865     z_0 = this->interp_map_2D[data_key].z_matrix[idx_y + 1][idx_x];
866     z_1 = this->interp_map_2D[data_key].z_matrix[idx_y + 1][idx_x + 1];
867
868     double interp_z_1 = ((z_1 - z_0) / (x_1 - x_0)) * (interp_x - x_0) + z_0;
869
870     // 5. perform vertical interpolation
871     double y_0 = this->interp_map_2D[data_key].y_vec[idx_y];
872     double y_1 = this->interp_map_2D[data_key].y_vec[idx_y + 1];
873
874     double interp_z =
875         ((interp_z_1 - interp_z_0) / (y_1 - y_0)) * (interp_y - y_0) + interp_z_0;
876
877     return interp_z;
878 } /* interp2D() */

```

## 4.10.4 Member Data Documentation

### 4.10.4.1 interp\_map\_1D

`std::map<int, InterpolatorStruct1D>` `Interpolator::interp_map_1D`

A map <int, [InterpolatorStruct1D](#)> of given 1D interpolation data.

### 4.10.4.2 interp\_map\_2D

`std::map<int, InterpolatorStruct2D>` `Interpolator::interp_map_2D`

A map <int, [InterpolatorStruct2D](#)> of given 2D interpolation data.

### 4.10.4.3 path\_map\_1D

`std::map<int, std::string>` `Interpolator::path_map_1D`

A map <int, string> of the paths (either relative or absolute) to the given 1D interpolation data.

### 4.10.4.4 path\_map\_2D

`std::map<int, std::string>` `Interpolator::path_map_2D`

A map <int, string> of the paths (either relative or absolute) to the given 2D interpolation data.

The documentation for this class was generated from the following files:

- header/[Interpolator.h](#)
- source/[Interpolator.cpp](#)

## 4.11 InterpolatorStruct1D Struct Reference

A struct which holds two parallel vectors for use in 1D interpolation.

```
#include <Interpolator.h>
```

### Public Attributes

- int `n_points` = 0  
*The number of data points in each parallel vector.*
- `std::vector< double > x_vec` = {}  
*A vector of independent data.*
- double `min_x` = 0  
*The minimum (i.e., first) element of `x_vec`.*
- double `max_x` = 0  
*The maximum (i.e., last) element of `x_vec`.*
- `std::vector< double > y_vec` = {}  
*A vector of dependent data.*

### 4.11.1 Detailed Description

A struct which holds two parallel vectors for use in 1D interpolation.

### 4.11.2 Member Data Documentation

#### 4.11.2.1 `max_x`

```
double InterpolatorStruct1D::max_x = 0
```

The maximum (i.e., last) element of `x_vec`.

#### 4.11.2.2 `min_x`

```
double InterpolatorStruct1D::min_x = 0
```

The minimum (i.e., first) element of `x_vec`.

#### 4.11.2.3 n\_points

```
int InterpolatorStruct1D::n_points = 0
```

The number of data points in each parallel vector.

#### 4.11.2.4 x\_vec

```
std::vector<double> InterpolatorStruct1D::x_vec = {}
```

A vector of independent data.

#### 4.11.2.5 y\_vec

```
std::vector<double> InterpolatorStruct1D::y_vec = {}
```

A vector of dependent data.

The documentation for this struct was generated from the following file:

- header/[Interpolator.h](#)

## 4.12 InterpolatorStruct2D Struct Reference

A struct which holds two parallel vectors and a matrix for use in 2D interpolation.

```
#include <Interpolator.h>
```

### Public Attributes

- int [n\\_rows](#) = 0  
*The number of rows in the matrix (also the length of y\_vec)*
- int [n\\_cols](#) = 0  
*The number of cols in the matrix (also the length of x\_vec)*
- std::vector< double > [x\\_vec](#) = {}  
*A vector of independent data (columns).*
- double [min\\_x](#) = 0  
*The minimum (i.e., first) element of x\_vec.*
- double [max\\_x](#) = 0  
*The maximum (i.e., last) element of x\_vec.*

*The minimum (i.e., first) element of y\_vec.*
- double [max\\_y](#) = 0  
*The maximum (i.e., last) element of y\_vec.*
- std::vector< std::vector< double > > [z\\_matrix](#) = {}  
*A matrix of dependent data.*

### 4.12.1 Detailed Description

A struct which holds two parallel vectors and a matrix for use in 2D interpolation.

### 4.12.2 Member Data Documentation

#### 4.12.2.1 max\_x

```
double InterpolatorStruct2D::max_x = 0
```

The maximum (i.e., last) element of x\_vec.

#### 4.12.2.2 max\_y

```
double InterpolatorStruct2D::max_y = 0
```

The maximum (i.e., last) element of y\_vec.

#### 4.12.2.3 min\_x

```
double InterpolatorStruct2D::min_x = 0
```

The minimum (i.e., first) element of x\_vec.

#### 4.12.2.4 min\_y

```
double InterpolatorStruct2D::min_y = 0
```

The minimum (i.e., first) element of y\_vec.

#### 4.12.2.5 n\_cols

```
int InterpolatorStruct2D::n_cols = 0
```

The number of cols in the matrix (also the length of x\_vec)

#### 4.12.2.6 n\_rows

```
int InterpolatorStruct2D::n_rows = 0
```

The number of rows in the matrix (also the length of y\_vec)

#### 4.12.2.7 x\_vec

```
std::vector<double> InterpolatorStruct2D::x_vec = {}
```

A vector of independent data (columns).

#### 4.12.2.8 y\_vec

```
std::vector<double> InterpolatorStruct2D::y_vec = {}
```

A vector of independent data (rows).

#### 4.12.2.9 z\_matrix

```
std::vector<std::vector<double> > InterpolatorStruct2D::z_matrix = {}
```

A matrix of dependent data.

## 4.13 Lilon Class Reference

A derived class of [Storage](#) which models energy storage by way of lithium-ion batteries.

```
#include <LiIon.h>
```

Inheritance diagram for Lilon:

Collaboration diagram for Lilon:

### Public Member Functions

- [Lilon](#) (void)  
*Constructor (dummy) for the [Lilon](#) class.*
- [Lilon](#) (int, double, [LilonInputs](#))  
*Constructor (intended) for the [Lilon](#) class.*
- void [handleReplacement](#) (int)  
*Method to handle asset replacement and capital cost incursion, if applicable.*
- double [getAvailablekW](#) (double)

- Method to get the discharge power currently available from the asset.*

  - double `getAcceptablekW` (double)
- Method to get the charge power currently acceptable by the asset.*

  - void `commitCharge` (int, double, double)
- Method which takes in the charging power for the current timestep and records.*

  - double `commitDischarge` (int, double, double, double)
- Method which takes in the discharging power for the current timestep and records. Returns the load remaining after discharge.*

  - `~Lilon` (void)

*Destructor for the `Lilon` class.*

## Public Attributes

- bool `power_degradation_flag`

*A flag which indicates whether or not power degradation should be modelled.*
- double `dynamic_energy_capacity_kWh`

*The dynamic (i.e. degrading) energy capacity [kWh] of the asset.*
- double `dynamic_power_capacity_kW`

*The dynamic (i.e. degrading) power capacity [kW] of the asset.*
- double `SOH`

*The state of health of the asset.*
- double `replace_SOH`

*The state of health at which the asset is considered "dead" and must be replaced.*
- double `degradation_alpha`

*A dimensionless acceleration coefficient used in modelling energy capacity degradation.*
- double `degradation_beta`

*A dimensionless acceleration exponent used in modelling energy capacity degradation.*
- double `degradation_B_hat_cal_0`

*A reference (or base) pre-exponential factor [ $1/\sqrt{\text{hrs}}$ ] used in modelling energy capacity degradation.*
- double `degradation_r_cal`

*A dimensionless constant used in modelling energy capacity degradation.*
- double `degradation_Ea_cal_0`

*A reference (or base) activation energy [J/mol] used in modelling energy capacity degradation.*
- double `degradation_a_cal`

*A pre-exponential factor [J/mol] used in modelling energy capacity degradation.*
- double `degradation_s_cal`

*A dimensionless constant used in modelling energy capacity degradation.*
- double `gas_constant_JmolK`

*The universal gas constant [J/mol.K].*
- double `temperature_K`

*The absolute environmental temperature [K] of the lithium ion battery energy storage system.*
- double `init_SOC`

*The initial state of charge of the asset.*
- double `min_SOC`

*The minimum state of charge of the asset. Will toggle `is_depleted` when reached.*
- double `hysteresis_SOC`

*The state of charge the asset must achieve to toggle `is_depleted`.*
- double `max_SOC`

*The maximum state of charge of the asset.*
- double `charging_efficiency`

- *The charging efficiency of the asset.*  
double [discharging\\_efficiency](#)
- *The discharging efficiency of the asset.*  
std::vector< double > [SOH\\_vec](#)
- *A vector of the state of health of the asset at each point in the modelling time series.*

### 4.13.1 Detailed Description

A derived class of [Storage](#) which models energy storage by way of lithium-ion batteries.

### 4.13.2 Constructor & Destructor Documentation

#### 4.13.2.1 [Lilon\(\)](#) [1/2]

```
LiIon::LiIon (
    void )
```

Constructor (dummy) for the [Lilon](#) class.

```
674 {
675     return;
676 } /* LiIon() */
```

#### 4.13.2.2 Lilon() [2/2]

```
LiIon::LiIon (
    int n_points,
    double n_years,
    LiIonInputs liion_inputs )
```

Constructor (intended) for the [LiIon](#) class.

##### Parameters

<i>n_points</i>	The number of points in the modelling time series.
<i>n_years</i>	The number of years being modelled.
<i>liion_inputs</i>	A structure of <a href="#">LiIon</a> constructor inputs.

```
704 :
705 Storage(
706     n_points,
707     n_years,
708     liion_inputs.storage_inputs
709 )
710 {
711     // 1. check inputs
712     this->__checkInputs(liion_inputs);
713
714     // 2. set attributes
715     this->type = StorageType :: LIION;
716     this->type_str = "LIION";
717
718     this->dynamic_energy_capacity_kWh = this->energy_capacity_kWh;
719     this->dynamic_power_capacity_kW = this->power_capacity_kW;
720
721     this->SOH = 1;
722     this->power_degradation_flag = liion_inputs.power_degradation_flag;
723     this->replace_SOH = liion_inputs.replace_SOH;
724
725     this->degradation_alpha = liion_inputs.degradation_alpha;
726     this->degradation_beta = liion_inputs.degradation_beta;
727     this->degradation_B_hat_cal_0 = liion_inputs.degradation_B_hat_cal_0;
728     this->degradation_r_cal = liion_inputs.degradation_r_cal;
729     this->degradation_Ea_cal_0 = liion_inputs.degradation_Ea_cal_0;
730     this->degradation_a_cal = liion_inputs.degradation_a_cal;
731     this->degradation_s_cal = liion_inputs.degradation_s_cal;
732     this->gas_constant_JmolK = liion_inputs.gas_constant_JmolK;
733     this->temperature_K = liion_inputs.temperature_K;
734
735     this->init_SOC = liion_inputs.init_SOC;
736     this->charge_kWh = this->init_SOC * this->energy_capacity_kWh;
737
738     this->min_SOC = liion_inputs.min_SOC;
739     this->hysteresis_SOC = liion_inputs.hysteresis_SOC;
740     this->max_SOC = liion_inputs.max_SOC;
741
742     this->charging_efficiency = liion_inputs.charging_efficiency;
743     this->discharging_efficiency = liion_inputs.discharging_efficiency;
744
745     if (liion_inputs.capital_cost < 0) {
746         this->capital_cost = this->__getGenericCapitalCost();
747     }
748     else {
749         this->capital_cost = liion_inputs.capital_cost;
750     }
751
752     if (liion_inputs.operation_maintenance_cost_kWh < 0) {
753         this->operation_maintenance_cost_kWh = this->__getGenericOpMaintCost();
754     }
755     else {
756         this->operation_maintenance_cost_kWh =
757             liion_inputs.operation_maintenance_cost_kWh;
758     }
759
760     if (not this->is_sunk) {
761         this->capital_cost_vec[0] = this->capital_cost;
762     }
763
764     this->SOH_vec.resize(this->n_points, 0);
765
766     // 3. construction print
```

```

767     if (this->print_flag) {
768         std::cout << "LiIon object constructed at " << this << std::endl;
769     }
770
771     return;
772 } /* LiIon() */

```

#### 4.13.2.3 ~LiIon()

```

LiIon::~~LiIon (
    void )

```

Destructor for the [Lilon](#) class.

```

1029 {
1030     // 1. destruction print
1031     if (this->print_flag) {
1032         std::cout << "LiIon object at " << this << " destroyed" << std::endl;
1033     }
1034
1035     return;
1036 } /* ~LiIon() */

```

### 4.13.3 Member Function Documentation

#### 4.13.3.1 \_\_checkInputs()

```

void LiIon::__checkInputs (
    LiIonInputs liion_inputs ) [private]

```

Helper method to check inputs to the [Lilon](#) constructor.

##### Parameters

<i>liion_inputs</i>	A structure of <a href="#">Lilon</a> constructor inputs.
---------------------	--

```

64 {
65     // 1. check replace_SOH
66     if (liion_inputs.replace_SOH < 0 or liion_inputs.replace_SOH > 1) {
67         std::string error_str = "ERROR: LiIon(): replace_SOH must be in the closed ";
68         error_str += "interval [0, 1]";
69
70         #ifdef _WIN32
71             std::cout << error_str << std::endl;
72         #endif
73
74         throw std::invalid_argument(error_str);
75     }
76
77     // 2. check init_SOC
78     if (liion_inputs.init_SOC < 0 or liion_inputs.init_SOC > 1) {
79         std::string error_str = "ERROR: LiIon(): init_SOC must be in the closed ";
80         error_str += "interval [0, 1]";
81
82         #ifdef _WIN32

251 return;
252 } /* __checkInputs() */

```

#### 4.13.3.2 \_\_getBcal()

```

double LiIon::__getBcal (
    double SOC ) [private]

```

Helper method to compute and return the base pre-exponential factor for a given state of charge.

Ref: [Truelove \[2023a\]](#)

#### Parameters

<b>SOC</b>	The current state of charge of the asset.
------------	---

#### Returns

The base pre-exponential factor for the given state of charge.

```

456 {
457     double B_cal = this->degradation_B_hat_cal_0 *
458         exp(this->degradation_r_cal * SOC);
459
460     return B_cal;
461 } /* __getBcal() */

```

#### 4.13.3.3 \_\_getEacal()

```

double LiIon::__getEacal (
    double SOC ) [private]

```

Helper method to compute and return the activation energy value for a given state of charge.

Ref: [Truelove \[2023a\]](#)

#### Parameters

<b>SOC</b>	The current state of charge of the asset.
------------	---

#### Returns

The activation energy value for the given state of charge.

```

483 {
484     double Ea_cal = this->degradation_Ea_cal_0;
485
486     Ea_cal -= this->degradation_a_cal *
487         (exp(this->degradation_s_cal * SOC) - 1);
488
489     return Ea_cal;
490 } /* __getEacal() */

```

#### 4.13.3.4 \_\_getGenericCapitalCost()

```

double LiIon::__getGenericCapitalCost (
    void ) [private]

```

Helper method to generate a generic lithium ion battery energy storage system capital cost.

This model was obtained by way of surveying an assortment of published lithium ion battery energy storage system costs, and then constructing a best fit model. Note that this model expresses cost in terms of Canadian dollars [CAD].

**Returns**

A generic capital cost for the lithium ion battery energy storage system [CAD].

```

275 {
276     double capital_cost_per_kWh = 250 * pow(this->energy_capacity_kWh, -0.15) + 650;
277
278     return capital_cost_per_kWh * this->energy_capacity_kWh;
279 } /* __getGenericCapitalCost() */

```

**4.13.3.5 \_\_getGenericOpMaintCost()**

```

double LiIon::__getGenericOpMaintCost (
    void ) [private]

```

Helper method to generate a generic lithium ion battery energy storage system operation and maintenance cost. This is a cost incurred per unit energy charged/discharged.

This model was obtained by way of surveying an assortment of published lithium ion battery energy storage system costs, and then constructing a best fit model. Note that this model expresses cost in terms of Canadian dollars [CAD/kWh].

**Returns**

A generic operation and maintenance cost, per unit energy charged/discharged, for the lithium ion battery energy storage system [CAD/kWh].

```

303 {
304     return 0.01;
305 } /* __getGenericOpMaintCost() */

```

**4.13.3.6 \_\_handleDegradation()**

```

void LiIon::__handleDegradation (
    int timestep,
    double dt_hrs,
    double charging_discharging_kW ) [private]

```

Helper method to apply degradation modelling and update attributes.

**Parameters**

<i>timestep</i>	The timestep (i.e., time series index) for the request.
<i>dt_hrs</i>	The interval of time [hrs] associated with the timestep.
<i>charging_discharging_kW</i>	The charging/discharging power [kW] being sent to the asset.

```

373 {
374     // 1. model degradation
375     this->__modelDegradation(dt_hrs, charging_discharging_kW);
376
377     // 2. update and record
378     this->SOH_vec[timestep] = this->SOH;
379     this->dynamic_energy_capacity_kWh = this->SOH * this->energy_capacity_kWh;
380
381     if (this->power_degradation_flag) {
382         this->dynamic_power_capacity_kW = this->SOH * this->power_capacity_kW;
383     }

```

```

384
385     return;
386 } /* __handleDegradation() */

```

#### 4.13.3.7 \_\_modelDegradation()

```

void LiIon::__modelDegradation (
    double dt_hrs,
    double charging_discharging_kW ) [private]

```

Helper method to model energy capacity degradation as a function of operating state.

Ref: [Truelove \[2023a\]](#)

##### Parameters

<i>dt_hrs</i>	The interval of time [hrs] associated with the timestep.
<i>charging_discharging_kW</i>	The charging/discharging power [kW] being sent to the asset.

```

409 {
410     // 1. compute SOC
411     double SOC = this->charge_kWh / this->energy_capacity_kWh;
412
413     // 2. compute C-rate and corresponding acceleration factor
414     double C_rate = charging_discharging_kW / this->power_capacity_kW;
415
416     double C_acceleration_factor =
417         1 + this->degradation_alpha * pow(C_rate, this->degradation_beta);
418
419     // 3. compute dSOH / dt
420     double B_cal = __getBcal(SOC);
421     double Ea_cal = __getEacal(SOC);
422
423     double dSOH_dt = B_cal *
424         exp((-1 * Ea_cal) / (this->gas_constant_JmolK * this->temperature_K));
425
426     dSOH_dt *= dSOH_dt;
427     dSOH_dt *= 1 / (2 * this->SOH);
428     dSOH_dt *= C_acceleration_factor;
429
430     // 4. update state of health
431     this->SOH -= dSOH_dt * dt_hrs;
432
433     return;
434 } /* __modelDegradation() */

```

#### 4.13.3.8 \_\_toggleDepleted()

```

void LiIon::__toggleDepleted (
    void ) [private]

```

Helper method to toggle the `is_depleted` attribute of `LiIon`.

```

320 {
321     if (this->is_depleted) {
322         double hysteresis_charge_kWh = this->hysteresis_SOC * this->energy_capacity_kWh;
323

```

#### 4.13.3.9 \_\_writeSummary()

```

void LiIon::__writeSummary (
    std::string write_path ) [private], [virtual]

```

Helper method to write summary results for [Lilon](#).

##### Parameters

<i>write_path</i>	A path (either relative or absolute) to the directory location where results are to be written. If already exists, will overwrite.
-------------------	--

Reimplemented from [Storage](#).

```

508 {
509     // 1. create filestream
510     write_path += "summary_results.md";
511     std::ofstream ofs;
512     ofs.open(write_path, std::ofstream::out);
513
514     // 2. write summary results (markdown)

#### 4.13.3.10 \_\_writeTimeSeries()

```

void LiIon::__writeTimeSeries (
    std::string write_path,
    std::vector< double > * time_vec_hrs_ptr,
    int max_lines = -1 ) [private], [virtual]

```

Helper method to write time series results for [Liln](#).

##### Parameters

<i>write_path</i>	A path (either relative or absolute) to the directory location where results are to be written. If already exists, will overwrite.
<i>time_vec_hrs_ptr</i>	A pointer to the <i>time_vec_hrs</i> attribute of the <a href="#">ElectricalLoad</a> .
<i>max_lines</i>	The maximum number of lines of output to write.

Reimplemented from [Storage](#).

```

626 {
627     // 1. create filestream
628     write_path += "time_series_results.csv";
629     std::ofstream ofs;
630     ofs.open(write_path, std::ofstream::out);

650         ofs << "\n";
651     }
652
653     ofs.close();
654     return;
655 } /* __writeTimeSeries() */

```

#### 4.13.3.11 commitCharge()

```

void LiIon::commitCharge (
    int timestep,
    double dt_hrs,
    double charge_kW ) [virtual]

```

Method which takes in the charging power for the current timestep and records.

##### Parameters

<i>timestep</i>	The timestep (i.e., time series index) for the request.
<i>dt_hrs</i>	The interval of time [hrs] associated with the timestep.
<i>charging_kW</i>	The charging power [kw] being sent to the asset.

Reimplemented from [Storage](#).

```

920 {
921     // 1. record charging power
922     this->charging_power_vec_kW[timestep] = charging_kW;
923
924     // 2. update charge and record
925     this->charge_kWh += this->charging_efficiency * charging_kW * dt_hrs;
926     this->charge_vec_kWh[timestep] = this->charge_kWh;
927
928     // 3. toggle depleted flag (if applicable)
929     this->__toggleDepleted();
930
931     // 4. model degradation
932     this->__handleDegradation(timestep, dt_hrs, charging_kW);
933
934     // 5. trigger replacement (if applicable)
935     if (this->SOH <= this->replace_SOH) {
936         this->handleReplacement(timestep);
937     }
938
939     // 6. capture operation and maintenance costs (if applicable)
940     if (charging_kW > 0) {
941         this->operation_maintenance_cost_vec[timestep] = charging_kW * dt_hrs *
942             this->operation_maintenance_cost_kWh;
943     }
944
945     this->power_kW = 0;
946     return;
947 } /* commitCharge() */

```

#### 4.13.3.12 commitDischarge()

```
double LiIon::commitDischarge (
    int timestep,
    double dt_hrs,
    double discharging_kW,
    double load_kW ) [virtual]
```

Method which takes in the discharging power for the current timestep and records. Returns the load remaining after discharge.

##### Parameters

<i>timestep</i>	The timestep (i.e., time series index) for the request.
<i>dt_hrs</i>	The interval of time [hrs] associated with the timestep.
<i>discharging_kW</i>	The discharging power [kW] being drawn from the asset.
<i>load_kW</i>	The load [kW] passed to the asset in this timestep.

##### Returns

The load [kW] remaining after the discharge is deducted from it.

Reimplemented from [Storage](#).

```
983 {
984     // 1. record discharging power, update total
985     this->discharging_power_vec_kW[timestep] = discharging_kW;
986     this->total_discharge_kWh += discharging_kW * dt_hrs;
987
988     // 2. update charge and record
989     this->charge_kWh -= (discharging_kW * dt_hrs) / this->discharging_efficiency;
990     this->charge_vec_kWh[timestep] = this->charge_kWh;
991
992     // 3. update load
993     load_kW -= discharging_kW;
994
995     // 4. toggle depleted flag (if applicable)
996     this->__toggleDepleted();
997
998     // 5. model degradation
999     this->__handleDegradation(timestep, dt_hrs, discharging_kW);
1000
1001     // 6. trigger replacement (if applicable)
1002     if (this->SOH <= this->replace_SOH) {
1003         this->handleReplacement(timestep);
1004     }
1005
1006     // 7. capture operation and maintenance costs (if applicable)
1007     if (discharging_kW > 0) {
1008         this->operation_maintenance_cost_vec[timestep] = discharging_kW * dt_hrs *
1009             this->operation_maintenance_cost_kWh;
1010     }
1011
1012     this->power_kW = 0;
1013     return load_kW;
1014 } /* commitDischarge() */
```

#### 4.13.3.13 getAcceptablekW()

```
double LiIon::getAcceptablekW (
    double dt_hrs ) [virtual]
```

Method to get the charge power currently acceptable by the asset.

## Parameters

<code>dt_hrs</code>	The interval of time [hrs] associated with the timestep.
---------------------	--

## Returns

The charging power [kW] currently acceptable by the asset.

Reimplemented from [Storage](#).

```

864 {
865     // 1. get max charge
866     double max_charge_kWh = this->max_SOC * this->energy_capacity_kWh;
867
868     if (max_charge_kWh > this->dynamic_energy_capacity_kWh) {
869         max_charge_kWh = this->dynamic_energy_capacity_kWh;
870     }
871
872     // 2. compute acceptable power
873     // (accounting for the power currently being charged/discharged by the asset)
874     double acceptable_kW =
875         (max_charge_kWh - this->charge_kWh) /
876         (this->charging_efficiency * dt_hrs);
877
878     acceptable_kW -= this->power_kW;
879
880     if (acceptable_kW <= 0) {
881         return 0;
882     }
883
884     // 3. apply power constraint
885     if (acceptable_kW > this->dynamic_power_capacity_kW) {
886         acceptable_kW = this->dynamic_power_capacity_kW;
887     }
888
889     return acceptable_kW;
890 } /* getAcceptablekW( */

```

## 4.13.3.14 getAvailablekW()

```

double LiIon::getAvailablekW (
    double dt_hrs ) [virtual]

```

Method to get the discharge power currently available from the asset.

## Parameters

<code>dt_hrs</code>	The interval of time [hrs] associated with the timestep.
---------------------	--

## Returns

The discharging power [kW] currently available from the asset.

Reimplemented from [Storage](#).

```

823 {
824     // 1. get min charge
825     double min_charge_kWh = this->min_SOC * this->energy_capacity_kWh;
826
827     // 2. compute available power
828     // (accounting for the power currently being charged/discharged by the asset)
829     double available_kW =
830         ((this->charge_kWh - min_charge_kWh) * this->discharging_efficiency) /
831         dt_hrs;

```

```

832
833     available_kW -= this->power_kW;
834
835     if (available_kW <= 0) {
836         return 0;
837     }
838
839     // 3. apply power constraint
840     if (available_kW > this->dynamic_power_capacity_kW) {
841         available_kW = this->dynamic_power_capacity_kW;
842     }
843
844     return available_kW;
845 } /* getAvailablekW() */

```

#### 4.13.3.15 handleReplacement()

```

void LiIon::handleReplacement (
    int timestep ) [virtual]

```

Method to handle asset replacement and capital cost incursion, if applicable.

##### Parameters

<i>timestep</i>	The current time step of the <a href="#">Model</a> run.
-----------------	---

Reimplemented from [Storage](#).

```

790 {
791     // 1. reset attributes
792     this->dynamic_energy_capacity_kWh = this->energy_capacity_kWh;
793     this->dynamic_power_capacity_kW = this->power_capacity_kW;
794     this->SOH = 1;
795
796     // 2. invoke base class method
797     Storage::handleReplacement(timestep);
798
799     // 3. correct attributes
800     this->charge_kWh = this->init_SOC * this->energy_capacity_kWh;
801     this->is_depleted = false;
802
803     return;
804 } /* __handleReplacement() */

```

### 4.13.4 Member Data Documentation

#### 4.13.4.1 charging\_efficiency

```
double LiIon::charging_efficiency
```

The charging efficiency of the asset.

**4.13.4.2 degradation\_a\_cal**

```
double LiIon::degradation_a_cal
```

A pre-exponential factor [J/mol] used in modelling energy capacity degradation.

**4.13.4.3 degradation\_alpha**

```
double LiIon::degradation_alpha
```

A dimensionless acceleration coefficient used in modelling energy capacity degradation.

**4.13.4.4 degradation\_B\_hat\_cal\_0**

```
double LiIon::degradation_B_hat_cal_0
```

A reference (or base) pre-exponential factor [ $1/\sqrt{\text{hrs}}$ ] used in modelling energy capacity degradation.

**4.13.4.5 degradation\_beta**

```
double LiIon::degradation_beta
```

A dimensionless acceleration exponent used in modelling energy capacity degradation.

**4.13.4.6 degradation\_Ea\_cal\_0**

```
double LiIon::degradation_Ea_cal_0
```

A reference (or base) activation energy [J/mol] used in modelling energy capacity degradation.

**4.13.4.7 degradation\_r\_cal**

```
double LiIon::degradation_r_cal
```

A dimensionless constant used in modelling energy capacity degradation.

#### 4.13.4.8 degradation\_s\_cal

```
double LiIon::degradation_s_cal
```

A dimensionless constant used in modelling energy capacity degradation.

#### 4.13.4.9 discharging\_efficiency

```
double LiIon::discharging_efficiency
```

The discharging efficiency of the asset.

#### 4.13.4.10 dynamic\_energy\_capacity\_kWh

```
double LiIon::dynamic_energy_capacity_kWh
```

The dynamic (i.e. degrading) energy capacity [kWh] of the asset.

#### 4.13.4.11 dynamic\_power\_capacity\_kW

```
double LiIon::dynamic_power_capacity_kW
```

The dynamic (i.e. degrading) power capacity [kW] of the asset.

#### 4.13.4.12 gas\_constant\_JmolK

```
double LiIon::gas_constant_JmolK
```

The universal gas constant [J/mol.K].

#### 4.13.4.13 hysteresis\_SOC

```
double LiIon::hysteresis_SOC
```

The state of charge the asset must achieve to toggle is\_depleted.

**4.13.4.14 init\_SOC**

```
double LiIon::init_SOC
```

The initial state of charge of the asset.

**4.13.4.15 max\_SOC**

```
double LiIon::max_SOC
```

The maximum state of charge of the asset.

**4.13.4.16 min\_SOC**

```
double LiIon::min_SOC
```

The minimum state of charge of the asset. Will toggle `is_depleted` when reached.

**4.13.4.17 power\_degradation\_flag**

```
bool LiIon::power_degradation_flag
```

A flag which indicates whether or not power degradation should be modelled.

**4.13.4.18 replace\_SOH**

```
double LiIon::replace_SOH
```

The state of health at which the asset is considered "dead" and must be replaced.

**4.13.4.19 SOH**

```
double LiIon::SOH
```

The state of health of the asset.

#### 4.13.4.20 SOH\_vec

```
std::vector<double> LiIon::SOH_vec
```

A vector of the state of health of the asset at each point in the modelling time series.

#### 4.13.4.21 temperature\_K

```
double LiIon::temperature_K
```

The absolute environmental temperature [K] of the lithium ion battery energy storage system.

The documentation for this class was generated from the following files:

## 4.14 LilonInputs Struct Reference

A structure which bundles the necessary inputs for the [Lilon](#) constructor. Provides default values for every necessary input. Note that this structure encapsulates [StorageInputs](#).

```
#include <LiIon.h>
```

Collaboration diagram for LilonInputs:

## Public Attributes

- [StorageInputs storage\\_inputs](#)  
*An encapsulated [StorageInputs](#) instance.*
- double [capital\\_cost](#) = -1  
*The capital cost of the asset (undefined currency). -1 is a sentinel value, which triggers a generic cost model on construction (in fact, any negative value here will trigger). Note that the generic cost model is in terms of Canadian dollars [CAD].*
- double [operation\\_maintenance\\_cost\\_kWh](#) = -1  
*The operation and maintenance cost of the asset [1/kWh] (undefined currency). This is a cost incurred per unit of energy charged/discharged. -1 is a sentinel value, which triggers a generic cost model on construction (in fact, any negative value here will trigger). Note that the generic cost model is in terms of Canadian dollars [CAD/kWh].*
- double [init\\_SOC](#) = 0.5  
*The initial state of charge of the asset.*
- double [min\\_SOC](#) = 0.15  
*The minimum state of charge of the asset. Will toggle is\_depleted when reached.*
- double [hysteresis\\_SOC](#) = 0.5  
*The state of charge the asset must achieve to toggle is\_depleted.*
- double [max\\_SOC](#) = 0.9  
*The maximum state of charge of the asset.*
- double [charging\\_efficiency](#) = 0.9  
*The charging efficiency of the asset.*
- double [discharging\\_efficiency](#) = 0.9  
*The discharging efficiency of the asset.*
- double [replace\\_SOH](#) = 0.8  
*The state of health at which the asset is considered "dead" and must be replaced.*
- bool [power\\_degradation\\_flag](#) = false  
*A flag which indicates whether or not power degradation should be modelled.*
- double [degradation\\_alpha](#) = 8.935  
*A dimensionless acceleration coefficient used in modelling energy capacity degradation.*
- double [degradation\\_beta](#) = 1  
*A dimensionless acceleration exponent used in modelling energy capacity degradation.*
- double [degradation\\_B\\_hat\\_cal\\_0](#) = 5.22226e6  
*A reference (or base) pre-exponential factor [1/sqrt(hrs)] used in modelling energy capacity degradation.*
- double [degradation\\_r\\_cal](#) = 0.4361  
*A dimensionless constant used in modelling energy capacity degradation.*
- double [degradation\\_Ea\\_cal\\_0](#) = 5.279e4  
*A reference (or base) activation energy [J/mol] used in modelling energy capacity degradation.*
- double [degradation\\_a\\_cal](#) = 100  
*A pre-exponential factor [J/mol] used in modelling energy capacity degradation.*
- double [degradation\\_s\\_cal](#) = 2  
*A dimensionless constant used in modelling energy capacity degradation.*
- double [gas\\_constant\\_JmolK](#) = 8.31446  
*The universal gas constant [J/mol.K].*
- double [temperature\\_K](#) = 273 + 20  
*The absolute environmental temperature [K] of the lithium ion battery energy storage system.*

### 4.14.1 Detailed Description

A structure which bundles the necessary inputs for the [Lilon](#) constructor. Provides default values for every necessary input. Note that this structure encapsulates [StorageInputs](#).

Ref: [Truelove \[2023a\]](#)

## 4.14.2 Member Data Documentation

### 4.14.2.1 capital\_cost

```
double LiIonInputs::capital_cost = -1
```

The capital cost of the asset (undefined currency). -1 is a sentinel value, which triggers a generic cost model on construction (in fact, any negative value here will trigger). Note that the generic cost model is in terms of Canadian dollars [CAD].

### 4.14.2.2 charging\_efficiency

```
double LiIonInputs::charging_efficiency = 0.9
```

The charging efficiency of the asset.

### 4.14.2.3 degradation\_a\_cal

```
double LiIonInputs::degradation_a_cal = 100
```

A pre-exponential factor [J/mol] used in modelling energy capacity degradation.

### 4.14.2.4 degradation\_alpha

```
double LiIonInputs::degradation_alpha = 8.935
```

A dimensionless acceleration coefficient used in modelling energy capacity degradation.

### 4.14.2.5 degradation\_B\_hat\_cal\_0

```
double LiIonInputs::degradation_B_hat_cal_0 = 5.22226e6
```

A reference (or base) pre-exponential factor [1/sqrt(hrs)] used in modelling energy capacity degradation.

#### 4.14.2.6 degradation\_beta

```
double LiIonInputs::degradation_beta = 1
```

A dimensionless acceleration exponent used in modelling energy capacity degradation.

#### 4.14.2.7 degradation\_Ea\_cal\_0

```
double LiIonInputs::degradation_Ea_cal_0 = 5.279e4
```

A reference (or base) activation energy [J/mol] used in modelling energy capacity degradation.

#### 4.14.2.8 degradation\_r\_cal

```
double LiIonInputs::degradation_r_cal = 0.4361
```

A dimensionless constant used in modelling energy capacity degradation.

#### 4.14.2.9 degradation\_s\_cal

```
double LiIonInputs::degradation_s_cal = 2
```

A dimensionless constant used in modelling energy capacity degradation.

#### 4.14.2.10 discharging\_efficiency

```
double LiIonInputs::discharging_efficiency = 0.9
```

The discharging efficiency of the asset.

#### 4.14.2.11 gas\_constant\_JmolK

```
double LiIonInputs::gas_constant_JmolK = 8.31446
```

The universal gas constant [J/mol.K].

#### 4.14.2.12 hysteresis\_SOC

```
double LiIonInputs::hysteresis_SOC = 0.5
```

The state of charge the asset must achieve to toggle is\_depleted.

#### 4.14.2.13 init\_SOC

```
double LiIonInputs::init_SOC = 0.5
```

The initial state of charge of the asset.

#### 4.14.2.14 max\_SOC

```
double LiIonInputs::max_SOC = 0.9
```

The maximum state of charge of the asset.

#### 4.14.2.15 min\_SOC

```
double LiIonInputs::min_SOC = 0.15
```

The minimum state of charge of the asset. Will toggle is\_depleted when reached.

#### 4.14.2.16 operation\_maintenance\_cost\_kWh

```
double LiIonInputs::operation_maintenance_cost_kWh = -1
```

The operation and maintenance cost of the asset [1/kWh] (undefined currency). This is a cost incurred per unit of energy charged/discharged. -1 is a sentinel value, which triggers a generic cost model on construction (in fact, any negative value here will trigger). Note that the generic cost model is in terms of Canadian dollars [CAD/kWh].

#### 4.14.2.17 power\_degradation\_flag

```
bool LiIonInputs::power_degradation_flag = false
```

A flag which indicates whether or not power degradation should be modelled.

#### 4.14.2.18 replace\_SOH

```
double LiIonInputs::replace_SOH = 0.8
```

The state of health at which the asset is considered "dead" and must be replaced.

#### 4.14.2.19 storage\_inputs

```
StorageInputs LiIonInputs::storage_inputs
```

An encapsulated [StorageInputs](#) instance.

#### 4.14.2.20 temperature\_K

```
double LiIonInputs::temperature_K = 273 + 20
```

The absolute environmental temperature [K] of the lithium ion battery energy storage system.

The documentation for this struct was generated from the following file:

- header/Storage/[Lilon.h](#)

## 4.15 Model Class Reference

A container class which forms the centre of PGMcpp. The [Model](#) class is intended to serve as the primary user interface with the functionality of PGMcpp, and as such it contains all other classes.

```
#include <Model.h>
```

Collaboration diagram for Model:

## Public Member Functions

- [Model](#) (void)  
*Constructor (dummy) for the [Model](#) class.*
- [Model](#) ([ModelInputs](#))  
*Constructor (intended) for the [Model](#) class.*
- void [addDiesel](#) ([DieselInputs](#))  
*Method to add a [Diesel](#) asset to the [Model](#).*
- void [addResource](#) ([NoncombustionType](#), std::string, int)  
*A method to add a renewable resource time series to the [Model](#).*
- void [addResource](#) ([RenewableType](#), std::string, int)  
*A method to add a renewable resource time series to the [Model](#).*
- void [addHydro](#) ([HydroInputs](#))  
*Method to add a [Hydro](#) asset to the [Model](#).*
- void [addSolar](#) ([SolarInputs](#))  
*Method to add a [Solar](#) asset to the [Model](#).*
- void [addTidal](#) ([TidalInputs](#))  
*Method to add a [Tidal](#) asset to the [Model](#).*
- void [addWave](#) ([WaveInputs](#))  
*Method to add a [Wave](#) asset to the [Model](#).*
- void [addWind](#) ([WindInputs](#))  
*Method to add a [Wind](#) asset to the [Model](#).*
- void [addLilon](#) ([LilonInputs](#))  
*Method to add a [Lilon](#) asset to the [Model](#).*
- void [run](#) (void)  
*A method to run the [Model](#).*
- void [reset](#) (void)  
*Method which resets the model for use in assessing a new candidate microgrid design. This method only clears the asset pointer vectors and resets select [Model](#) attributes. It leaves the [Controller](#), [ElectricalLoad](#), and [Resources](#) objects of the [Model](#) alone.*
- void [clear](#) (void)  
*Method to clear all attributes of the [Model](#) object.*
- void [writeResults](#) (std::string, int=-1)  
*Method which writes [Model](#) results to an output directory. Also calls out to [writeResults\(\)](#) for each contained asset.*
- [~Model](#) (void)  
*Destructor for the [Model](#) class.*

## Public Attributes

- double [total\\_fuel\\_consumed\\_L](#)  
*The total fuel consumed [L] over a model run.*
- [Emissions](#) [total\\_emissions](#)  
*An [Emissions](#) structure for holding total emissions [kg].*
- double [net\\_present\\_cost](#)  
*The net present cost of the [Model](#) (undefined currency).*
- double [total\\_renewable\\_dispatch\\_kWh](#)  
*The total energy dispatched [kWh] by all renewable assets over the [Model](#) run.*
- double [total\\_dispatch\\_discharge\\_kWh](#)  
*The total energy dispatched/discharged [kWh] over the [Model](#) run.*
- double [levellized\\_cost\\_of\\_energy\\_kWh](#)  
*The levellized cost of energy, per unit energy dispatched/discharged, of the [Model](#) [1/kWh] (undefined currency).*

- [Controller controller](#)  
*Controller component of Model.*
- [ElectricalLoad electrical\\_load](#)  
*ElectricalLoad component of Model.*
- [Resources resources](#)  
*Resources component of Model.*
- `std::vector< Combustion * > combustion_ptr_vec`  
*A vector of pointers to the various [Combustion](#) assets in the [Model](#).*
- `std::vector< Noncombustion * > noncombustion_ptr_vec`  
*A vector of pointers to the various [Noncombustion](#) assets in the [Model](#).*
- `std::vector< Renewable * > renewable_ptr_vec`  
*A vector of pointers to the various [Renewable](#) assets in the [Model](#).*
- `std::vector< Storage * > storage_ptr_vec`  
*A vector of pointers to the various [Storage](#) assets in the [Model](#).*

## Private Member Functions

- `void __checkInputs (ModelInputs)`  
*Helper method (private) to check inputs to the [Model](#) constructor.*
- `void __computeFuelAndEmissions (void)`  
*Helper method to compute the total fuel consumption and emissions over the [Model](#) run.*
- `void __computeNetPresentCost (void)`  
*Helper method to compute the overall net present cost, for the [Model](#) run, from the asset-wise net present costs. Also tallies up total dispatch and discharge.*
- `void __computeLevellizedCostOfEnergy (void)`  
*Helper method to compute the overall levellized cost of energy, for the [Model](#) run, from the asset-wise levellized costs of energy.*
- `void __computeEconomics (void)`  
*Helper method to compute key economic metrics for the [Model](#) run.*
- `void __writeSummary (std::string)`  
*Helper method to write summary results for [Model](#).*
- `void __writeTimeSeries (std::string, int=-1)`  
*Helper method to write time series results for [Model](#).*

### 4.15.1 Detailed Description

A container class which forms the centre of PGMcpp. The [Model](#) class is intended to serve as the primary user interface with the functionality of PGMcpp, and as such it contains all other classes.

### 4.15.2 Constructor & Destructor Documentation

#### 4.15.2.1 Model() [1/2]

```
Model::Model (
    void )
```

Constructor (dummy) for the [Model](#) class.

```
598 {
599     return;
600 } /* Model() */
```

#### 4.15.2.2 Model() [2/2]

```
Model::Model (
    ModelInputs model_inputs )
```

Constructor (intended) for the [Model](#) class.

##### Parameters

<i>model_inputs</i>	A structure of <a href="#">Model</a> constructor inputs.
---------------------	--

```
617 {
618     // 1. check inputs
619     this->__checkInputs(model_inputs);
620
621     // 2. read in electrical load data
622     this->electrical_load.readLoadData(model_inputs.path_2_electrical_load_time_series);
623
624     // 3. set control mode
625     this->controller.setControlMode(model_inputs.control_mode);
626
627     // 4. set public attributes
628     this->total_fuel_consumed_L = 0;
629     this->net_present_cost = 0;
630     this->total_dispatch_discharge_kWh = 0;
631     this->total_renewable_dispatch_kWh = 0;
632     this->levellized_cost_of_energy_kWh = 0;
633
634     return;
635 } /* Model() */
```

#### 4.15.2.3 ~Model()

```
Model::~Model (
    void )
```

Destructor for the [Model](#) class.

```
1154 {
1155     this->clear();
1156     return;
1157 } /* ~Model() */
```

### 4.15.3 Member Function Documentation

### 4.15.3.1 `__checkInputs()`

```
void Model::__checkInputs (
    ModelInputs model_inputs ) [private]
```

Helper method (private) to check inputs to the [Model](#) constructor.

#### Parameters

<i>model_inputs</i>	A structure of <a href="#">Model</a> constructor inputs.
---------------------	--

```
65 {
66     // 1. check path_2_electrical_load_time_series
67     if (model_inputs.path_2_electrical_load_time_series.empty()) {
68         std::string error_str = "ERROR: Model() path_2_electrical_load_time_series ";
69         error_str += "cannot be empty";
70
71         #ifdef WIN32
72             std::cout << error_str << std::endl;
73         #endif
74
75         throw std::invalid_argument(error_str);
76     }
77
78     return;
79 } /* __checkInputs() */
```

### 4.15.3.2 `__computeEconomics()`

```
void Model::__computeEconomics (
    void ) [private]
```

Helper method to compute key economic metrics for the [Model](#) run.

```
265 {
266     this->__computeNetPresentCost();
267     this->__computeLevellizedCostOfEnergy();
268
269     return;
270 } /* __computeEconomics() */
```

### 4.15.3.3 `__computeFuelAndEmissions()`

```
void Model::__computeFuelAndEmissions (
    void ) [private]
```

Helper method to compute the total fuel consumption and emissions over the [Model](#) run.

```
95 {
96     for (size_t i = 0; i < this->combustion_ptr_vec.size(); i++) {
97         this->combustion_ptr_vec[i]->computeFuelAndEmissions();
98
99         this->total_fuel_consumed_L +=
100             this->combustion_ptr_vec[i]->total_fuel_consumed_L;
101
102         this->total_emissions.CO2_kg +=
103             this->combustion_ptr_vec[i]->total_emissions.CO2_kg;
104
105         this->total_emissions.CO_kg +=
106             this->combustion_ptr_vec[i]->total_emissions.CO_kg;
107
108         this->total_emissions.NOx_kg +=
109             this->combustion_ptr_vec[i]->total_emissions.NOx_kg;
110
111         this->total_emissions.SOx_kg +=
```

```

112         this->combustion_ptr_vec[i]->total_emissions.SOx_kg;
113
114         this->total_emissions.CH4_kg +=
115             this->combustion_ptr_vec[i]->total_emissions.CH4_kg;
116
117         this->total_emissions.PM_kg +=
118             this->combustion_ptr_vec[i]->total_emissions.PM_kg;
119     }
120
121     return;
122 } /* __computeFuelAndEmissions() */

```

#### 4.15.3.4 \_\_computeLevellizedCostOfEnergy()

```

void Model::__computeLevellizedCostOfEnergy (
    void ) [private]

```

Helper method to compute the overall levellized cost of energy, for the [Model](#) run, from the asset-wise levellized costs of energy.

```

212 {
213     // 1. account for Combustion economics in levellized cost of energy
214     for (size_t i = 0; i < this->combustion_ptr_vec.size(); i++) {
215         this->levellized_cost_of_energy_kWh +=
216             (
217                 this->combustion_ptr_vec[i]->levellized_cost_of_energy_kWh *
218                 this->combustion_ptr_vec[i]->total_dispatch_kWh
219             ) / this->total_dispatch_discharge_kWh;
220     }
221
222     // 2. account for Noncombustion economics in levellized cost of energy
223     for (size_t i = 0; i < this->noncombustion_ptr_vec.size(); i++) {
224         this->levellized_cost_of_energy_kWh +=
225             (
226                 this->noncombustion_ptr_vec[i]->levellized_cost_of_energy_kWh *
227                 this->noncombustion_ptr_vec[i]->total_dispatch_kWh
228             ) / this->total_dispatch_discharge_kWh;
229     }
230
231     // 3. account for Renewable economics in levellized cost of energy
232     for (size_t i = 0; i < this->renewable_ptr_vec.size(); i++) {
233         this->levellized_cost_of_energy_kWh +=
234             (
235                 this->renewable_ptr_vec[i]->levellized_cost_of_energy_kWh *
236                 this->renewable_ptr_vec[i]->total_dispatch_kWh
237             ) / this->total_dispatch_discharge_kWh;
238     }
239
240     // 4. account for Storage economics in levellized cost of energy
241     for (size_t i = 0; i < this->storage_ptr_vec.size(); i++) {
242         this->levellized_cost_of_energy_kWh +=
243             (
244                 this->storage_ptr_vec[i]->levellized_cost_of_energy_kWh *
245                 this->storage_ptr_vec[i]->total_discharge_kWh
246             ) / this->total_dispatch_discharge_kWh;
247     }
248
249     return;
250 } /* __computeLevellizedCostOfEnergy() */

```

#### 4.15.3.5 \_\_computeNetPresentCost()

```

void Model::__computeNetPresentCost (
    void ) [private]

```

Helper method to compute the overall net present cost, for the [Model](#) run, from the asset-wise net present costs. Also tallies up total dispatch and discharge.

```

139 {
140     // 1. account for Combustion economics in net present cost

```

```

141 // increment total dispatch
142 for (size_t i = 0; i < this->combustion_ptr_vec.size(); i++) {
143     this->combustion_ptr_vec[i]->computeEconomics(
144         &(this->electrical_load.time_vec_hrs)
145     );
146
147     this->net_present_cost += this->combustion_ptr_vec[i]->net_present_cost;
148
149     this->total_dispatch_discharge_kWh +=
150         this->combustion_ptr_vec[i]->total_dispatch_kWh;
151 }
152
153 // 2. account for Noncombustion economics in net present cost
154 // increment total dispatch
155 for (size_t i = 0; i < this->noncombustion_ptr_vec.size(); i++) {
156     this->noncombustion_ptr_vec[i]->computeEconomics(
157         &(this->electrical_load.time_vec_hrs)
158     );
159
160     this->net_present_cost += this->noncombustion_ptr_vec[i]->net_present_cost;
161
162     this->total_dispatch_discharge_kWh +=
163         this->noncombustion_ptr_vec[i]->total_dispatch_kWh;
164 }
165
166 // 3. account for Renewable economics in net present cost,
167 // increment total dispatch
168 for (size_t i = 0; i < this->renewable_ptr_vec.size(); i++) {
169     this->renewable_ptr_vec[i]->computeEconomics(
170         &(this->electrical_load.time_vec_hrs)
171     );
172
173     this->net_present_cost += this->renewable_ptr_vec[i]->net_present_cost;
174
175     this->total_dispatch_discharge_kWh +=
176         this->renewable_ptr_vec[i]->total_dispatch_kWh;
177
178     this->total_renewable_dispatch_kWh +=
179         this->renewable_ptr_vec[i]->total_dispatch_kWh;
180 }
181
182 // 4. account for Storage economics in net present cost
183 // increment total dispatch
184 for (size_t i = 0; i < this->storage_ptr_vec.size(); i++) {
185     this->storage_ptr_vec[i]->computeEconomics(
186         &(this->electrical_load.time_vec_hrs)
187     );
188
189     this->net_present_cost += this->storage_ptr_vec[i]->net_present_cost;
190
191     this->total_dispatch_discharge_kWh +=
192         this->storage_ptr_vec[i]->total_discharge_kWh;
193 }
194
195 return;
196 } /* __computeNetPresentCost() */

```

#### 4.15.3.6 \_\_writeSummary()

```

void Model::__writeSummary (
    std::string write_path ) [private]

```

Helper method to write summary results for [Model](#).

##### Parameters

<i>write_path</i>	A path (either relative or absolute) to the directory location where results are to be written. If already exists, will overwrite.
-------------------	--

```

288 {
289     // 1. create subdirectory
290     write_path += "Model/";
291     std::filesystem::create_directory(write_path);
292 }

```

```

293 // 2. create filestream
294 write_path += "summary_results.md";
295 std::ofstream ofs;
296 ofs.open(write_path, std::ofstream::out);
297
298 // 3. write summary results (markdown)
299 ofs << "# Model Summary Results\n";
300 ofs << "\n-----\n\n";

#### 4.15.3.7 \_\_writeTimeSeries()

```

void Model::__writeTimeSeries (
    std::string write_path,
    int max_lines = -1 ) [private]

```

Helper method to write time series results for [Model](#).

##### Parameters

<i>write_path</i>	A path (either relative or absolute) to the directory location where results are to be written. If already exists, will overwrite.
<i>max_lines</i>	The maximum number of lines of output to write.

```

514 {
515     // 1. create filestream
516     write_path += "Model/time_series_results.csv";
517     std::ofstream ofs;
518     ofs.open(write_path, std::ofstream::out);
519
520     // 2. write time series results header (comma separated value)
521     ofs << "Time (since start of data) [hrs],";
522     ofs << "Electrical Load [kW],";
523     ofs << "Net Load [kW],";

```

#### 4.15.3.8 addDiesel()

```

void Model::addDiesel (
    DieselInputs diesel_inputs )

```

Method to add a [Diesel](#) asset to the [Model](#).

##### Parameters

<i>diesel_inputs</i>	A structure of <a href="#">Diesel</a> constructor inputs.
----------------------	---

```

652 {
653     Combustion* diesel_ptr = new Diesel(
654         this->electrical_load.n_points,
655         this->electrical_load.n_years,
656         diesel_inputs,
657         &(this->electrical_load.time_vec_hrs)
658     );
659
660     this->combustion_ptr_vec.push_back(diesel_ptr);
661
662     return;
663 } /* addDiesel() */

```

#### 4.15.3.9 addHydro()

```

void Model::addHydro (
    HydroInputs hydro_inputs )

```

Method to add a [Hydro](#) asset to the [Model](#).

## Parameters

<i>hydro_inputs</i>	A structure of <a href="#">Hydro</a> constructor inputs.
---------------------	--

```

756 {
757     Noncombustion* hydro_ptr = new Hydro(
758         this->electrical_load.n_points,
759         this->electrical_load.n_years,
760         hydro_inputs,
761         &(this->electrical_load.time_vec_hrs)
762     );
763
764     this->noncombustion_ptr_vec.push_back(hydro_ptr);
765
766     return;
767 } /* addHydro() */

```

## 4.15.3.10 addLilon()

```

void Model::addLiIon (
    LiIonInputs liion_inputs )

```

Method to add a [Lilon](#) asset to the [Model](#).

## Parameters

<i>liion_inputs</i>	A structure of <a href="#">Lilon</a> constructor inputs.
---------------------	--

```

896 {
897     Storage* liion_ptr = new LiIon(
898         this->electrical_load.n_points,
899         this->electrical_load.n_years,
900         liion_inputs
901     );
902
903     this->storage_ptr_vec.push_back(liion_ptr);
904
905     return;
906 } /* addLiIon() */

```

## 4.15.3.11 addResource() [1/2]

```

void Model::addResource (
    NoncombustionType noncombustion_type,
    std::string path_2_resource_data,
    int resource_key )

```

A method to add a renewable resource time series to the [Model](#).

## Parameters

<i>noncombustion_type</i>	The type of renewable resource being added to the <a href="#">Model</a> .
<i>path_2_resource_data</i>	A string defining the path (either relative or absolute) to the given resource time series.
<i>resource_key</i>	A key used to index into the <a href="#">Resources</a> object, used to associate <a href="#">Renewable</a> assets with the corresponding resource.

```

692 {
693     resources.addResource(
694         noncombustion_type,
695         path_2_resource_data,
696         resource_key,
697         &(this->electrical_load)
698     );
699
700     return;
701 } /* addResource() */

```

#### 4.15.3.12 addResource() [2/2]

```

void Model::addResource (
    RenewableType renewable_type,
    std::string path_2_resource_data,
    int resource_key )

```

A method to add a renewable resource time series to the [Model](#).

##### Parameters

<i>renewable_type</i>	The type of renewable resource being added to the <a href="#">Model</a> .
<i>path_2_resource_data</i>	A string defining the path (either relative or absolute) to the given resource time series.
<i>resource_key</i>	A key used to index into the <a href="#">Resources</a> object, used to associate <a href="#">Renewable</a> assets with the corresponding resource.

```

730 {
731     resources.addResource(
732         renewable_type,
733         path_2_resource_data,
734         resource_key,
735         &(this->electrical_load)
736     );
737
738     return;
739 } /* addResource() */

```

#### 4.15.3.13 addSolar()

```

void Model::addSolar (
    SolarInputs solar_inputs )

```

Method to add a [Solar](#) asset to the [Model](#).

##### Parameters

<i>solar_inputs</i>	A structure of <a href="#">Solar</a> constructor inputs.
---------------------	--

```

784 {
785     Renewable* solar_ptr = new Solar(
786         this->electrical_load.n_points,
787         this->electrical_load.n_years,
788         solar_inputs,
789         &(this->electrical_load.time_vec_hrs)
790     );
791
792     this->renewable_ptr_vec.push_back(solar_ptr);

```

```

793
794     return;
795 } /* addSolar() */

```

#### 4.15.3.14 addTidal()

```

void Model::addTidal (
    TidalInputs tidal_inputs )

```

Method to add a [Tidal](#) asset to the [Model](#).

##### Parameters

<i>tidal_inputs</i>	A structure of <a href="#">Tidal</a> constructor inputs.
---------------------	--

```

812 {
813     Renewable* tidal_ptr = new Tidal(
814         this->electrical_load.n_points,
815         this->electrical_load.n_years,
816         tidal_inputs,
817         &(this->electrical_load.time_vec_hrs)
818     );
819
820     this->renewable_ptr_vec.push_back(tidal_ptr);
821
822     return;
823 } /* addTidal() */

```

#### 4.15.3.15 addWave()

```

void Model::addWave (
    WaveInputs wave_inputs )

```

Method to add a [Wave](#) asset to the [Model](#).

##### Parameters

<i>wave_inputs</i>	A structure of <a href="#">Wave</a> constructor inputs.
--------------------	---

```

840 {
841     Renewable* wave_ptr = new Wave(
842         this->electrical_load.n_points,
843         this->electrical_load.n_years,
844         wave_inputs,
845         &(this->electrical_load.time_vec_hrs)
846     );
847
848     this->renewable_ptr_vec.push_back(wave_ptr);
849
850     return;
851 } /* addWave() */

```

#### 4.15.3.16 addWind()

```

void Model::addWind (
    WindInputs wind_inputs )

```

Method to add a [Wind](#) asset to the [Model](#).

#### Parameters

<code>wind_inputs</code>	A structure of <a href="#">Wind</a> constructor inputs.
--------------------------	---

```

868 {
869     Renewable* wind_ptr = new Wind(
870         this->electrical_load.n_points,
871         this->electrical_load.n_years,
872         wind_inputs,
873         &(this->electrical_load.time_vec_hrs)
874     );
875
876     this->renewable_ptr_vec.push_back(wind_ptr);
877
878     return;
879 } /* addWind() */

```

#### 4.15.3.17 clear()

```

void Model::clear (
    void )

```

Method to clear all attributes of the [Model](#) object.

```

1023 {
1024     // 1. reset
1025     this->reset();
1026
1027     // 2. clear components
1028     controller.clear();
1029     electrical_load.clear();
1030     resources.clear();
1031
1032     return;
1033 } /* clear() */

```

#### 4.15.3.18 reset()

```

void Model::reset (
    void )

```

Method which resets the model for use in assessing a new candidate microgrid design. This method only clears the asset pointer vectors and resets select [Model](#) attributes. It leaves the [Controller](#), [ElectricalLoad](#), and [Resources](#) objects of the [Model](#) alone.

```

965 {
966     // 1. clear combustion_ptr_vec
967     for (size_t i = 0; i < this->combustion_ptr_vec.size(); i++) {
968         delete this->combustion_ptr_vec[i];
969     }
970     this->combustion_ptr_vec.clear();
971
972     // 2. clear noncombustion_ptr_vec
973     for (size_t i = 0; i < this->noncombustion_ptr_vec.size(); i++) {
974         delete this->noncombustion_ptr_vec[i];
975     }
976     this->noncombustion_ptr_vec.clear();
977
978     // 3. clear renewable_ptr_vec
979     for (size_t i = 0; i < this->renewable_ptr_vec.size(); i++) {
980         delete this->renewable_ptr_vec[i];
981     }
982     this->renewable_ptr_vec.clear();
983
984     // 4. clear storage_ptr_vec

```

```

985     for (size_t i = 0; i < this->storage_ptr_vec.size(); i++) {
986         delete this->storage_ptr_vec[i];
987     }
988     this->storage_ptr_vec.clear();
989
990     // 5. reset components and attributes
991     this->controller.clear();
992
993     this->total_fuel_consumed_L = 0;
994
995     this->total_emissions.CO2_kg = 0;
996     this->total_emissions.CO_kg = 0;
997     this->total_emissions.NOx_kg = 0;
998     this->total_emissions.SOx_kg = 0;
999     this->total_emissions.CH4_kg = 0;
1000     this->total_emissions.PM_kg = 0;
1001
1002     this->net_present_cost = 0;

1005     this->levellized_cost_of_energy_kWh = 0;
1006
1007     return;
1008 } /* reset() */

```

#### 4.15.3.19 run()

```

void Model::run (
    void )

```

A method to run the [Model](#).

```

921 {
922     // 1. init Controller
923     this->controller.init(
924         &(this->electrical_load),
925         &(this->renewable_ptr_vec),

934         &(this->combustion_ptr_vec),
935         &(this->noncombustion_ptr_vec),
936         &(this->renewable_ptr_vec),
937         &(this->storage_ptr_vec)
938     );
939
940     // 3. compute total fuel consumption and emissions
941     this->__computeFuelAndEmissions();
942
943     // 4. compute key economic metrics
944     this->__computeEconomics();
945
946     return;
947 } /* run() */

```

#### 4.15.3.20 writeResults()

```

void Model::writeResults (
    std::string write_path,
    int max_lines = -1 )

```

Method which writes [Model](#) results to an output directory. Also calls out to [writeResults\(\)](#) for each contained asset.

## Parameters

<i>write_path</i>	A path (either relative or absolute) to the directory location where results are to be written. If already exists, will overwrite.
<i>max_lines</i>	The maximum number of lines of output to write. If <0, then all available lines are written. If =0, then only summary results are written.

```

1061 {
1062     // 1. handle sentinel
1063     if (max_lines < 0) {
1064         max_lines = this->electrical_load.n_points;
1065     }
1066
1067     // 2. check for pre-existing, warn (and remove), then create
1068     if (write_path.back() != '/') {
1069         write_path += '/';
1070     }
1071
1072     if (std::filesystem::is_directory(write_path)) {
1073         std::string warning_str = "WARNING: Model::writeResults(): ";
1074         warning_str += write_path;
1075         warning_str += " already exists, contents will be overwritten!";
1076
1077         std::cout << warning_str << std::endl;
1078
1079         std::filesystem::remove_all(write_path);
1080     }
1081
1082     std::filesystem::create_directory(write_path);
1083
1084     // 3. write summary
1085     this->__writeSummary(write_path);
1086
1087     // 4. write time series
1088     if (max_lines > this->electrical_load.n_points) {
1089         max_lines = this->electrical_load.n_points;
1090     }
1091
1092     if (max_lines > 0) {
1093         this->__writeTimeSeries(write_path, max_lines);
1094     }
1095
1096     // 5. call out to Combustion :: writeResults()
1097     for (size_t i = 0; i < this->combustion_ptr_vec.size(); i++) {
1098         this->combustion_ptr_vec[i]->writeResults(
1099             write_path,
1100             &(this->electrical_load.time_vec_hrs),
1101             i,
1102             max_lines
1103         );
1104     }
1105
1106     // 6. call out to Noncombustion :: writeResults()
1107     for (size_t i = 0; i < this->noncombustion_ptr_vec.size(); i++) {
1108         this->noncombustion_ptr_vec[i]->writeResults(
1109             write_path,
1110             &(this->electrical_load.time_vec_hrs),
1111             i,
1112             max_lines
1113         );
1114     }
1115
1116     // 7. call out to Renewable :: writeResults()
1117     for (size_t i = 0; i < this->renewable_ptr_vec.size(); i++) {
1118         this->renewable_ptr_vec[i]->writeResults(
1119             write_path,
1120             &(this->electrical_load.time_vec_hrs),
1121             &(this->resources.resource_map_1D),
1122             &(this->resources.resource_map_2D),
1123             i,
1124             max_lines
1125         );
1126     }
1127
1128     // 8. call out to Storage :: writeResults()
1129     for (size_t i = 0; i < this->storage_ptr_vec.size(); i++) {
1130         this->storage_ptr_vec[i]->writeResults(
1131             write_path,
1132             &(this->electrical_load.time_vec_hrs),
1133             i,
1134             max_lines
1135         );
1136     }
1137

```

```
1138     return;  
1139 } /* writeResults() */
```

## 4.15.4 Member Data Documentation

### 4.15.4.1 combustion\_ptr\_vec

```
std::vector<Combustion*> Model::combustion_ptr_vec
```

A vector of pointers to the various [Combustion](#) assets in the [Model](#).

### 4.15.4.2 controller

```
Controller Model::controller
```

[Controller](#) component of [Model](#).

### 4.15.4.3 electrical\_load

```
ElectricalLoad Model::electrical_load
```

[ElectricalLoad](#) component of [Model](#).

### 4.15.4.4 levellized\_cost\_of\_energy\_kWh

```
double Model::levellized_cost_of_energy_kWh
```

The levellized cost of energy, per unit energy dispatched/discharged, of the [Model](#) [1/kWh] (undefined currency).

### 4.15.4.5 net\_present\_cost

```
double Model::net_present_cost
```

The net present cost of the [Model](#) (undefined currency).

#### 4.15.4.6 noncombustion\_ptr\_vec

```
std::vector<Noncombustion*> Model::noncombustion_ptr_vec
```

A vector of pointers to the various [Noncombustion](#) assets in the [Model](#).

#### 4.15.4.7 renewable\_ptr\_vec

```
std::vector<Renewable*> Model::renewable_ptr_vec
```

A vector of pointers to the various [Renewable](#) assets in the [Model](#).

#### 4.15.4.8 resources

```
Resources Model::resources
```

[Resources](#) component of [Model](#).

#### 4.15.4.9 storage\_ptr\_vec

```
std::vector<Storage*> Model::storage_ptr_vec
```

A vector of pointers to the various [Storage](#) assets in the [Model](#).

#### 4.15.4.10 total\_dispatch\_discharge\_kWh

```
double Model::total_dispatch_discharge_kWh
```

The total energy dispatched/discharged [kWh] over the [Model](#) run.

#### 4.15.4.11 total\_emissions

```
Emissions Model::total_emissions
```

An [Emissions](#) structure for holding total emissions [kg].

#### 4.15.4.12 total\_fuel\_consumed\_L

```
double Model::total_fuel_consumed_L
```

The total fuel consumed [L] over a model run.

#### 4.15.4.13 total\_renewable\_dispatch\_kWh

```
double Model::total_renewable_dispatch_kWh
```

The total energy dispatched [kWh] by all renewable assets over the [Model](#) run.

The documentation for this class was generated from the following files:

- header/[Model.h](#)
- source/[Model.cpp](#)

## 4.16 ModelInputs Struct Reference

A structure which bundles the necessary inputs for the [Model](#) constructor. Provides default values for every necessary input (except `path_2_electrical_load_time_series`, for which a valid input must be provided).

```
#include <Model.h>
```

### Public Attributes

- `std::string path_2_electrical_load_time_series = ""`  
*A string defining the path (either relative or absolute) to the given electrical load time series.*
- `ControlMode control_mode = ControlMode :: LOAD_FOLLOWING`  
*The control mode to be applied by the [Controller](#) object.*

#### 4.16.1 Detailed Description

A structure which bundles the necessary inputs for the [Model](#) constructor. Provides default values for every necessary input (except `path_2_electrical_load_time_series`, for which a valid input must be provided).

#### 4.16.2 Member Data Documentation

#### 4.16.2.1 control\_mode

```
ControlMode ModelInputs::control_mode = ControlMode :: LOAD_FOLLOWING
```

The control mode to be applied by the [Controller](#) object.

#### 4.16.2.2 path\_2\_electrical\_load\_time\_series

```
std::string ModelInputs::path_2_electrical_load_time_series = ""
```

A string defining the path (either relative or absolute) to the given electrical load time series.

The documentation for this struct was generated from the following file:

- [header/Model.h](#)

## 4.17 Noncombustion Class Reference

The root of the [Noncombustion](#) branch of the [Production](#) hierarchy. This branch contains derived classes which model controllable production which is not based on combustion.

```
#include <Noncombustion.h>
```

Inheritance diagram for Noncombustion:

Collaboration diagram for Noncombustion:

## Public Member Functions

- [Noncombustion](#) (void)  
*Constructor (dummy) for the [Noncombustion](#) class.*

*Constructor (intended) for the [Noncombustion](#) class.*
- virtual void [handleReplacement](#) (int)  
*Method to handle asset replacement and capital cost incursion, if applicable.*
- void [computeEconomics](#) (std::vector< double > \*)  
*Helper method to compute key economic metrics for the [Model](#) run.*
- virtual double [requestProductionkW](#) (int, double, double)
- virtual double [requestProductionkW](#) (int, double, double, double)
- virtual double [commit](#) (int, double, double, double)  
*Method which takes in production and load for the current timestep, computes and records dispatch and curtailment, and then returns remaining load.*
- virtual double [commit](#) (int, double, double, double, double)
- void [writeResults](#) (std::string, std::vector< double > \*, int, int=-1)  
*Method which writes [Noncombustion](#) results to an output directory.*
- virtual [~Noncombustion](#) (void)  
*Destructor for the [Noncombustion](#) class.*

## Public Attributes

- [NoncombustionType](#) type  
*The type ([NoncombustionType](#)) of the asset.*
- int [resource\\_key](#)  
*A key used to index into the [Resources](#) object, to associate this asset with the appropriate resource time series.*

## Private Member Functions

- void `__checkInputs` ([NoncombustionInputs](#))  
Helper method to check inputs to the [Noncombustion](#) constructor.
- void `__handleStartStop` (int, double, double)  
Helper method to handle the starting/stopping of the [Noncombustion](#) asset.
- virtual void `__writeSummary` (std::string)
- virtual void `__writeTimeSeries` (std::string, std::vector< double > \*, int=-1)

### 4.17.1 Detailed Description

The root of the [Noncombustion](#) branch of the [Production](#) hierarchy. This branch contains derived classes which model controllable production which is not based on combustion.

### 4.17.2 Constructor & Destructor Documentation

#### 4.17.2.1 `Noncombustion()` [1/2]

```
Noncombustion::Noncombustion (
    void )
```

Constructor (dummy) for the [Noncombustion](#) class.

```
127 {
128     return;
129 } /* Noncombustion() */
```

#### 4.17.2.2 `Noncombustion()` [2/2]

```
Noncombustion::Noncombustion (
    int n_points,
    double n_years,
    NoncombustionInputs noncombustion_inputs,
    std::vector< double > * time_vec_hrs_ptr )
```

Constructor (intended) for the [Noncombustion](#) class.

##### Parameters

<code>n_points</code>	The number of points in the modelling time series.
<code>n_years</code>	The number of years being modelled.
<code>noncombustion_inputs</code>	A structure of <a href="#">Noncombustion</a> constructor inputs.
<code>time_vec_hrs_ptr</code>	A pointer to the vector containing the modelling time series.

```
161 :
162 Production(
163     n_points,
```

```

164     n_years,
165     noncombustion_inputs.production_inputs,
166     time_vec_hrs_ptr
167 )
168 {
169     // 1. check inputs
170     this->__checkInputs(noncombustion_inputs);
171
172     // 2. set attributes
173     //...
174
175     // 3. construction print
176     if (this->print_flag) {
177         std::cout << "Noncombustion object constructed at " << this << std::endl;
178     }
179
180     return;
181 } /* Noncombustion() */

```

#### 4.17.2.3 ~Noncombustion()

```

Noncombustion::~~Noncombustion (
    void ) [virtual]

```

Destructor for the [Noncombustion](#) class.

```

372 {
373     // 1. destruction print
374     if (this->print_flag) {
375         std::cout << "Noncombustion object at " << this << " destroyed" << std::endl;
376     }
377
378     return;
379 } /* ~Noncombustion() */

```

### 4.17.3 Member Function Documentation

#### 4.17.3.1 \_\_checkInputs()

```

void Noncombustion::__checkInputs (
    NoncombustionInputs noncombustion_inputs ) [private]

```

Helper method to check inputs to the [Noncombustion](#) constructor.

##### Parameters

<i>noncombustion_inputs</i>	A structure of <a href="#">Noncombustion</a> constructor inputs.
-----------------------------	--

```

64 {
65     //...
66
67     return;
68 } /* __checkInputs() */

```

#### 4.17.3.2 \_\_handleStartStop()

```

void Noncombustion::__handleStartStop (

```

```

    int timestep,
    double dt_hrs,
    double production_kW ) [private]

```

Helper method to handle the starting/stopping of the [Noncombustion](#) asset.

```

91 {
92     if (this->is_running) {
93         // handle stopping
94         if (production_kW <= 0) {
95             this->is_running = false;
96         }
97     }
98
99     else {
100        // handle starting
101        if (production_kW > 0) {
102            this->is_running = true;
103            this->n_starts++;
104        }
105    }
106
107    return;
108 } /* __handleStartStop() */

```

#### 4.17.3.3 \_\_writeSummary()

```

virtual void Noncombustion::__writeSummary (
    std::string ) [inline], [private], [virtual]

```

Reimplemented in [Hydro](#).

```

95 {return;}

```

#### 4.17.3.4 \_\_writeTimeSeries()

```

virtual void Noncombustion::__writeTimeSeries (
    std::string ,
    std::vector< double > * ,
    int = -1 ) [inline], [private], [virtual]

```

Reimplemented in [Hydro](#).

```

100     {return;}

```

#### 4.17.3.5 commit() [1/2]

```

double Noncombustion::commit (
    int timestep,
    double dt_hrs,
    double production_kW,
    double load_kW ) [virtual]

```

Method which takes in production and load for the current timestep, computes and records dispatch and curtailment, and then returns remaining load.

**Parameters**

<i>timestep</i>	The timestep (i.e., time series index) for the request.
<i>dt_hrs</i>	The interval of time [hrs] associated with the timestep.
<i>production_kW</i>	The production [kW] of the asset in this timestep.
<i>load_kW</i>	The load [kW] passed to the asset in this timestep.

**Returns**

The load [kW] remaining after the dispatch is deducted from it.

Reimplemented from [Production](#).

```

267 {
268     // 1. handle start/stop
269     this->__handleStartStop(timestep, dt_hrs, production_kW);
270
271     // 2. invoke base class method
272     load_kW = Production::commit(
273         timestep,
274         dt_hrs,
275         production_kW,
276         load_kW
277     );
278
279
280     //...
281
282     return load_kW;
283 } /* commit() */

```

**4.17.3.6 commit() [2/2]**

```

virtual double Noncombustion::commit (
    int ,
    double ,
    double ,
    double ,
    double ) [inline], [virtual]

```

Reimplemented in [Hydro](#).

```

121 {return 0;}

```

**4.17.3.7 computeEconomics()**

```

void Noncombustion::computeEconomics (
    std::vector< double > * time_vec_hrs_ptr ) [virtual]

```

Helper method to compute key economic metrics for the [Model](#) run.

Ref: [HOMER \[2023b\]](#)

## Parameters

<i>time_vec_hrs_ptr</i>	A pointer to the <i>time_vec_hrs</i> attribute of the <a href="#">ElectricalLoad</a> .
-------------------------	--

Reimplemented from [Production](#).

```

226 {
227     // 1. invoke base class method
228     Production::computeEconomics(time_vec_hrs_ptr);
229
230     return;
231 } /* computeEconomics() */

```

#### 4.17.3.8 handleReplacement()

```

void Noncombustion::handleReplacement (
    int timestep ) [virtual]

```

Method to handle asset replacement and capital cost incursion, if applicable.

## Parameters

<i>timestep</i>	The current time step of the <a href="#">Model</a> run.
-----------------	---

Reimplemented from [Production](#).

Reimplemented in [Hydro](#).

```

199 {
200     // 1. reset attributes
201     //...
202
203     // 2. invoke base class method
204     Production::handleReplacement(timestep);
205
206     return;
207 } /* __handleReplacement() */

```

#### 4.17.3.9 requestProductionkW() [1/2]

```

virtual double Noncombustion::requestProductionkW (
    int ,
    double ,
    double ) [inline], [virtual]
117 {return 0;}

```

#### 4.17.3.10 requestProductionkW() [2/2]

```

virtual double Noncombustion::requestProductionkW (
    int ,
    double ,
    double ,
    double ) [inline], [virtual]

```

Reimplemented in [Hydro](#).

```

118 {return 0;}

```

#### 4.17.3.11 writeResults()

```
void Noncombustion::writeResults (
    std::string write_path,
    std::vector< double > * time_vec_hrs_ptr,
    int combustion_index,
    int max_lines = -1 )
```

Method which writes [Noncombustion](#) results to an output directory.

##### Parameters

<i>write_path</i>	A path (either relative or absolute) to the directory location where results are to be written. If already exists, will overwrite.
<i>time_vec_hrs_ptr</i>	A pointer to the <code>time_vec_hrs</code> attribute of the <a href="#">ElectricalLoad</a> .
<i>noncombustion_index</i>	An integer which corresponds to the index of the <a href="#">Noncombustion</a> asset in the <a href="#">Model</a> .
<i>max_lines</i>	The maximum number of lines of output to write. If $<0$ , then all available lines are written. If $=0$ , then only summary results are written.

```
319 {
320     // 1. handle sentinel
321     if (max_lines < 0) {
322         max_lines = this->n_points;
323     }
324
325     // 2. create subdirectories
326     write_path += "Production/";
327     if (not std::filesystem::is_directory(write_path)) {
328         std::filesystem::create_directory(write_path);
329     }
330
331     write_path += "Noncombustion/";
332     if (not std::filesystem::is_directory(write_path)) {
333         std::filesystem::create_directory(write_path);
334     }
335
336     write_path += this->type_str;
337     write_path += "_";
338     write_path += std::to_string(int(ceil(this->capacity_kW)));
339     write_path += "kW_idx";
340     write_path += std::to_string(combustion_index);
341     write_path += "/";
342     std::filesystem::create_directory(write_path);
343
344     // 3. write summary
345     this->__writeSummary(write_path);
346
347     // 4. write time series
348     if (max_lines > this->n_points) {
349         max_lines = this->n_points;
350     }
351
352     if (max_lines > 0) {
353         this->__writeTimeSeries(write_path, time_vec_hrs_ptr, max_lines);
354     }
355
356     return;
357 } /* writeResults() */
```

### 4.17.4 Member Data Documentation

#### 4.17.4.1 resource\_key

```
int Noncombustion::resource_key
```

A key used to index into the [Resources](#) object, to associate this asset with the appropriate resource time series.

#### 4.17.4.2 type

`NoncombustionType` `Noncombustion::type`

The type (`NoncombustionType`) of the asset.

The documentation for this class was generated from the following files:

- [header/Production/Noncombustion/Noncombustion.h](#)
- [source/Production/Noncombustion/Noncombustion.cpp](#)

## 4.18 NoncombustionInputs Struct Reference

A structure which bundles the necessary inputs for the [Noncombustion](#) constructor. Provides default values for every necessary input. Note that this structure encapsulates [ProductionInputs](#).

```
#include <Noncombustion.h>
```

Collaboration diagram for `NoncombustionInputs`:

### Public Attributes

- [ProductionInputs](#) `production_inputs`  
An encapsulated [ProductionInputs](#) instance.

#### 4.18.1 Detailed Description

A structure which bundles the necessary inputs for the [Noncombustion](#) constructor. Provides default values for every necessary input. Note that this structure encapsulates [ProductionInputs](#).

#### 4.18.2 Member Data Documentation

#### 4.18.2.1 production\_inputs

`ProductionInputs` `NoncombustionInputs::production_inputs`

An encapsulated `ProductionInputs` instance.

The documentation for this struct was generated from the following file:

- `header/Production/Noncombustion/Noncombustion.h`

### 4.19 Production Class Reference

The base class of the `Production` hierarchy. This hierarchy contains derived classes which model the production of energy, be it renewable or otherwise.

```
#include <Production.h>
```

Inheritance diagram for `Production`:

Collaboration diagram for `Production`:

## Public Member Functions

- [Production](#) (void)  
*Constructor (dummy) for the [Production](#) class.*
- [Production](#) (int, double, [ProductionInputs](#), std::vector< double > \*)  
*Constructor (intended) for the [Production](#) class.*
- virtual void [handleReplacement](#) (int)  
*Method to handle asset replacement and capital cost incursion, if applicable.*
- double [computeRealDiscountAnnual](#) (double, double)  
*Method to compute the real, annual discount rate to be used in computing model economics. This enables application of the discount factor approach.*
- virtual void [computeEconomics](#) (std::vector< double > \*)  
*Helper method to compute key economic metrics for the [Model](#) run.*
- double [getProductionkW](#) (int)  
*A method to simply fetch the normalized production at a particular point in the given normalized production time series, multiply by the rated capacity of the asset, and return.*
- virtual double [commit](#) (int, double, double, double)  
*Method which takes in production and load for the current timestep, computes and records dispatch and curtailment, and then returns remaining load.*
- virtual [~Production](#) (void)  
*Destructor for the [Production](#) class.*

## Public Attributes

- [Interpolator](#) [interpolator](#)  
*[Interpolator](#) component of [Production](#).*
- bool [print\\_flag](#)  
*A flag which indicates whether or not object construct/destruction should be verbose.*
- bool [is\\_running](#)  
*A boolean which indicates whether or not the asset is running.*
- bool [is\\_sunk](#)  
*A boolean which indicates whether or not the asset should be considered a sunk cost (i.e., capital cost incurred at the start of the model, or no).*
- bool [normalized\\_production\\_series\\_given](#)  
*A boolean which indicates whether or not a normalized production time series is given.*
- int [n\\_points](#)  
*The number of points in the modelling time series.*
- int [n\\_starts](#)  
*The number of times the asset has been started.*
- int [n\\_replacements](#)  
*The number of times the asset has been replaced.*
- double [n\\_years](#)  
*The number of years being modelled.*
- double [running\\_hours](#)  
*The number of hours for which the asset has been operating.*
- double [replace\\_running\\_hrs](#)  
*The number of running hours after which the asset must be replaced.*
- double [capacity\\_kW](#)  
*The rated production capacity [kW] of the asset.*
- double [nominal\\_inflation\\_annual](#)  
*The nominal, annual inflation rate to use in computing model economics.*

- double [nominal\\_discount\\_annual](#)  
*The nominal, annual discount rate to use in computing model economics.*
- double [real\\_discount\\_annual](#)  
*The real, annual discount rate used in computing model economics. Is computed from the given nominal inflation and discount rates.*
- double [capital\\_cost](#)  
*The capital cost of the asset (undefined currency).*
- double [operation\\_maintenance\\_cost\\_kWh](#)  
*The operation and maintenance cost of the asset [1/kWh] (undefined currency). This is a cost incurred per unit of energy produced.*
- double [net\\_present\\_cost](#)  
*The net present cost of this asset.*
- double [total\\_dispatch\\_kWh](#)  
*The total energy dispatched [kWh] over the [Model](#) run.*
- double [levellized\\_cost\\_of\\_energy\\_kWh](#)  
*The levellized cost of energy [1/kWh] (undefined currency) of this asset. This metric considers only dispatch.*
- std::string [type\\_str](#)  
*A string describing the type of the asset.*
- std::string [path\\_2\\_normalized\\_production\\_time\\_series](#)  
*A string defining the path (either relative or absolute) to the given normalized production time series.*
- std::vector< bool > [is\\_running\\_vec](#)  
*A boolean vector for tracking if the asset is running at a particular point in time.*
- std::vector< double > [normalized\\_production\\_vec](#)  
*A vector of normalized production [ ] at each point in the modelling time series.*
- std::vector< double > [production\\_vec\\_kW](#)  
*A vector of production [kW] at each point in the modelling time series.*
- std::vector< double > [dispatch\\_vec\\_kW](#)  
*A vector of dispatch [kW] at each point in the modelling time series. Dispatch is the amount of production that is sent to the grid to satisfy load.*
- std::vector< double > [storage\\_vec\\_kW](#)  
*A vector of storage [kW] at each point in the modelling time series. [Storage](#) is the amount of production that is sent to storage.*
- std::vector< double > [curtailment\\_vec\\_kW](#)  
*A vector of curtailment [kW] at each point in the modelling time series. Curtailment is the amount of production that can be neither dispatched nor stored, and is hence curtailed.*
- std::vector< double > [capital\\_cost\\_vec](#)  
*A vector of capital costs (undefined currency) incurred over each modelling time step. These costs are not discounted (i.e., these are actual costs).*
- std::vector< double > [operation\\_maintenance\\_cost\\_vec](#)  
*A vector of operation and maintenance costs (undefined currency) incurred over each modelling time step. These costs are not discounted (i.e., these are actual costs).*

## Private Member Functions

- void [\\_\\_checkInputs](#) (int, double, [ProductionInputs](#))  
*Helper method to check inputs to the [Production](#) constructor.*
- void [\\_\\_checkTimePoint](#) (double, double)  
*Helper method to check received time point against expected time point. The given time series should align point-wise with the previously given electrical load time series.*
- void [\\_\\_throwLengthError](#) (void)  
*Helper method to throw data length error (if not the same as the given electrical load time series).*
- void [\\_\\_checkNormalizedProduction](#) (double)

Helper method to check that given data values are everywhere contained in the closed interval  $[0, 1]$ . A normalized production time series is expected, so this must be true everywhere.

- void `__readNormalizedProductionData` (std::vector< double > \*)

Helper method to read in a given time series of normalized production.

### 4.19.1 Detailed Description

The base class of the [Production](#) hierarchy. This hierarchy contains derived classes which model the production of energy, be it renewable or otherwise.

### 4.19.2 Constructor & Destructor Documentation

#### 4.19.2.1 `Production()` [1/2]

```
Production::Production (
    void )
```

Constructor (dummy) for the [Production](#) class.

```
307 {
308     return;
309 } /* Production() */
```

#### 4.19.2.2 `Production()` [2/2]

```
Production::Production (
    int n_points,
    double n_years,
    ProductionInputs production_inputs,
    std::vector< double > * time_vec_hrs_ptr )
```

Constructor (intended) for the [Production](#) class.

##### Parameters

<code>n_points</code>	The number of points in the modelling time series.
<code>n_years</code>	The number of years being modelled.
<code>production_inputs</code>	A structure of <a href="#">Production</a> constructor inputs.
<code>time_vec_hrs_ptr</code>	A pointer to the vector containing the modelling time series.

```
342 {
343     // 1. check inputs
344     this->__checkInputs(n_points, n_years, production_inputs);
345
346     // 2. set attributes
347     this->print_flag = production_inputs.print_flag;
348     this->is_running = false;
349     this->is_sunk = production_inputs.is_sunk;
350     this->normalized_production_series_given = false;
351 }
```

```

352     this->n_points = n_points;
353     this->n_starts = 0;
354     this->n_replacements = 0;
355
356     this->n_years = n_years;
357
358     this->running_hours = 0;
359     this->replace_running_hrs = production_inputs.replace_running_hrs;
360
361     this->capacity_kW = production_inputs.capacity_kW;
362
363     this->nominal_inflation_annual = production_inputs.nominal_inflation_annual;
364     this->nominal_discount_annual = production_inputs.nominal_discount_annual;
365
366     this->real_discount_annual = this->computeRealDiscountAnnual(
367         production_inputs.nominal_inflation_annual,
368         production_inputs.nominal_discount_annual
369     );
370
371     this->capital_cost = 0;
372     this->operation_maintenance_cost_kWh = 0;
373     this->net_present_cost = 0;
374     this->total_dispatch_kWh = 0;
375     this->levellized_cost_of_energy_kWh = 0;
376
377     this->path_2_normalized_production_time_series = "";
378
379     this->is_running_vec.resize(this->n_points, 0);
380
381     this->normalized_production_vec.resize(this->n_points, 0);
382     this->production_vec_kW.resize(this->n_points, 0);
383     this->dispatch_vec_kW.resize(this->n_points, 0);
384     this->storage_vec_kW.resize(this->n_points, 0);
385     this->curtailment_vec_kW.resize(this->n_points, 0);
386
387     this->capital_cost_vec.resize(this->n_points, 0);
388     this->operation_maintenance_cost_vec.resize(this->n_points, 0);
389
390     // 3. read in normalized production time series (if given)
391     if (not production_inputs.path_2_normalized_production_time_series.empty()) {
392         this->normalized_production_series_given = true;
393
394         this->path_2_normalized_production_time_series =
395             production_inputs.path_2_normalized_production_time_series;
396
397         this->__readNormalizedProductionData(time_vec_hrs_ptr);
398     }
399
400     // 4. construction print
401     if (this->print_flag) {
402         std::cout << "Production object constructed at " << this << std::endl;
403     }
404
405     return;
406 } /* Production() */

```

#### 4.19.2.3 ~Production()

```

Production::~~Production (
    void ) [virtual]

```

Destructor for the [Production](#) class.

```

655 {
656     // 1. destruction print
657     if (this->print_flag) {
658         std::cout << "Production object at " << this << " destroyed" << std::endl;
659     }
660
661     return;
662 } /* ~Production() */

```

### 4.19.3 Member Function Documentation

4.19.3.1 `__checkInputs()`

```
void Production::__checkInputs (
    int n_points,
    double n_years,
    ProductionInputs production_inputs ) [private]
```

Helper method to check inputs to the [Production](#) constructor.

## Parameters

<code>n_points</code>	The number of points in the modelling time series.
<code>production_inputs</code>	A structure of <a href="#">Production</a> constructor inputs.

```
70 {
71     // 1. check n_points
72     if (n_points <= 0) {
73         std::string error_str = "ERROR: Production(): n_points must be > 0";
74
75         #ifdef _WIN32
76             std::cout << error_str << std::endl;
77         #endif
78
79         throw std::invalid_argument(error_str);
80     }
81
82     // 2. check n_years
83     if (n_years <= 0) {
84         std::string error_str = "ERROR: Production(): n_years must be > 0";
85
86         #ifdef _WIN32
87             std::cout << error_str << std::endl;
88         #endif
89
90         throw std::invalid_argument(error_str);
91     }
92
93     // 3. check capacity_kW
94     if (production_inputs.capacity_kW <= 0) {
95         std::string error_str = "ERROR: Production(): ";
96         error_str += "ProductionInputs::capacity_kW must be > 0";
97
98         #ifdef _WIN32
99             std::cout << error_str << std::endl;
100        #endif
101
102        throw std::invalid_argument(error_str);
103    }
104
105    // 4. check replace_running_hrs
106    if (production_inputs.replace_running_hrs <= 0) {
107        std::string error_str = "ERROR: Production(): ";
108        error_str += "ProductionInputs::replace_running_hrs must be > 0";
109
110        #ifdef _WIN32
111            std::cout << error_str << std::endl;
112        #endif
113
114        throw std::invalid_argument(error_str);
115    }
116
117    return;
118 } /* __checkInputs() */
```

4.19.3.2 `__checkNormalizedProduction()`

```
void Production::__checkNormalizedProduction (
    double normalized_production ) [private]
```

Helper method to check that given data values are everywhere contained in the closed interval [0, 1]. A normalized production time series is expected, so this must be true everywhere.

## Parameters

<i>normalized_production</i>	The normalized production value to check
------------------------------	--

```

210 {
211     if (normalized_production < 0 or normalized_production > 1) {
212         std::string error_str = "ERROR: Production(): ";
213         error_str += "the given normalized production time series at ";
214         error_str += this->path_2_normalized_production_time_series;
215         error_str += " contains normalized production values outside the closed ";
216         error_str += "interval [0, 1]";
217
218         #ifdef _WIN32
219             std::cout << error_str << std::endl;
220         #endif
221
222         throw std::runtime_error(error_str);
223     }
224
225     return;
226 } /* __throwValueError() */

```

## 4.19.3.3 \_\_checkTimePoint()

```

void Production::__checkTimePoint (
    double time_received_hrs,
    double time_expected_hrs ) [private]

```

Helper method to check received time point against expected time point. The given time series should align point-wise with the previously given electrical load time series.

## Parameters

<i>time_received_hrs</i>	The point in time received from the given data.
<i>time_expected_hrs</i>	The point in time expected (this comes from the electrical load time series).

```

146 {
147     if (time_received_hrs != time_expected_hrs) {
148         std::string error_str = "ERROR: Production(): ";
149         error_str += "the given normalized production time series at ";
150         error_str += this->path_2_normalized_production_time_series;
151         error_str += " does not align with the ";
152         error_str += "previously given electrical load time series";
153
154         #ifdef _WIN32
155             std::cout << error_str << std::endl;
156         #endif
157
158         throw std::runtime_error(error_str);
159     }
160
161     return;
162 } /* __checkTimePoint() */

```

## 4.19.3.4 \_\_readNormalizedProductionData()

```

void Production::__readNormalizedProductionData (
    std::vector< double > * time_vec_hrs_ptr ) [private]

```

Helper method to read in a given time series of normalized production.

## Parameters

<code>time_vec_hrs_ptr</code>	A pointer to the vector containing the modelling time series.
-------------------------------	---

```

247 {
248     // 1. init CSV reader
249     io::CSVReader<2> CSV(this->path_2_normalized_production_time_series);
250
251     CSV.read_header(
252         io::ignore_extra_column,
253         "Time (since start of data) [hrs]",
254         "Normalized Production [ ]"
255     );
256
257     // 2. read in normalized performance data,
258     //     check values and check against time series (point-wise and length)
259     int n_points = 0;
260     double time_hrs = 0;
261     double time_expected_hrs = 0;
262     double normalized_production = 0;
263
264     while (CSV.read_row(time_hrs, normalized_production)) {
265         // 2.1. check length of data
266         if (n_points > this->n_points) {
267             this->__throwLengthError();
268         }
269
270         // 2.2. check normalized production value
271         this->__checkNormalizedProduction(normalized_production);
272
273         // 2.3. check time point
274         time_expected_hrs = time_vec_hrs_ptr->at(n_points);
275         this->__checkTimePoint(time_hrs, time_expected_hrs);
276
277         // 2.4. write to normalized production vector, increment n_points
278         this->normalized_production_vec[n_points] = normalized_production;
279         n_points++;
280     }
281
282     // 3. check length of data
283     if (n_points != this->n_points) {
284         this->__throwLengthError();
285     }
286
287     return;
288 } /* __readNormalizedProductionData() */

```

## 4.19.3.5 \_\_throwLengthError()

```

void Production::__throwLengthError (
    void ) [private]

```

Helper method to throw data length error (if not the same as the given electrical load time series).

```

177 {
178     std::string error_str = "ERROR: Production(): ";
179     error_str += "the given normalized production time series at ";
180     error_str += this->path_2_normalized_production_time_series;
181     error_str += " is not the same length as the previously given electrical";
182     error_str += " load time series";
183
184     #ifdef _WIN32
185         std::cout << error_str << std::endl;
186     #endif
187
188     throw std::runtime_error(error_str);
189
190     return;
191 } /* __throwLengthError() */

```

#### 4.19.3.6 commit()

```
double Production::commit (
    int timestep,
    double dt_hrs,
    double production_kW,
    double load_kW ) [virtual]
```

Method which takes in production and load for the current timestep, computes and records dispatch and curtailment, and then returns remaining load.

##### Parameters

<i>timestep</i>	The timestep (i.e., time series index) for the request.
<i>dt_hrs</i>	The interval of time [hrs] associated with the timestep.
<i>production_kW</i>	The production [kW] of the asset in this timestep.
<i>load_kW</i>	The load [kW] passed to the asset in this timestep.

##### Returns

The load [kW] remaining after the dispatch is deducted from it.

Reimplemented in [Wind](#), [Wave](#), [Tidal](#), [Solar](#), [Renewable](#), [Noncombustion](#), [Diesel](#), and [Combustion](#).

```
596 {
597     // 1. record production
598     this->production_vec_kW[timestep] = production_kW;
599
600     // 2. compute and record dispatch and curtailment
601     double dispatch_kW = 0;
602     double curtailment_kW = 0;
603
604     if (production_kW > load_kW) {
605         dispatch_kW = load_kW;
606         curtailment_kW = production_kW - dispatch_kW;
607     }
608
609     else {
610         dispatch_kW = production_kW;
611     }
612
613     this->dispatch_vec_kW[timestep] = dispatch_kW;
614     this->total_dispatch_kWh += dispatch_kW * dt_hrs;
615     this->curtailment_vec_kW[timestep] = curtailment_kW;
616
617     // 3. update load
618     load_kW -= dispatch_kW;
619
620     // 4. update and log running attributes
621     if (this->is_running) {
622         // 4.1. log running state, running hours
623         this->is_running_vec[timestep] = this->is_running;
624         this->running_hours += dt_hrs;
625
626         // 4.2. incur operation and maintenance costs
627         double produced_kWh = production_kW * dt_hrs;
628
629         double operation_maintenance_cost =
630             this->operation_maintenance_cost_kWh * produced_kWh;
631         this->operation_maintenance_cost_vec[timestep] = operation_maintenance_cost;
632     }
633
634     // 5. trigger replacement, if applicable
635     if (this->running_hours >= (this->n_replacements + 1) * this->replace_running_hrs) {
636         this->handleReplacement(timestep);
637     }
638
639     return load_kW;
640 } /* commit() */
```

### 4.19.3.7 computeEconomics()

```
void Production::computeEconomics (
    std::vector< double > * time_vec_hrs_ptr ) [virtual]
```

Helper method to compute key economic metrics for the [Model](#) run.

Ref: [HOMER \[2023b\]](#)

Ref: [HOMER \[2023g\]](#)

Ref: [HOMER \[2023i\]](#)

Ref: [HOMER \[2023a\]](#)

#### Parameters

<i>time_vec_hrs_ptr</i>	A pointer to the <i>time_vec_hrs</i> attribute of the <a href="#">ElectricalLoad</a> .
-------------------------	--

1. compute levlized cost of energy (per unit dispatched)

Reimplemented in [Renewable](#), [Noncombustion](#), and [Combustion](#).

```
494 {
495     // 1. compute net present cost
496     double t_hrs = 0;
497     double real_discount_scalar = 0;
498
499     for (int i = 0; i < this->n_points; i++) {
500         t_hrs = time_vec_hrs_ptr->at(i);
501
502         real_discount_scalar = 1.0 / pow(
503             1 + this->real_discount_annual,
504             t_hrs / 8760
505         );
506
507         this->net_present_cost += real_discount_scalar * this->capital_cost_vec[i];
508
509         this->net_present_cost +=
510             real_discount_scalar * this->operation_maintenance_cost_vec[i];
511     }
512
513     // assuming 8,760 hours per year
514     if (this->total_dispatch_kWh <= 0) {
515         this->levellized_cost_of_energy_kWh = this->net_present_cost;
516     }
517
518     else {
519         double n_years = time_vec_hrs_ptr->at(this->n_points - 1) / 8760;
520
521         double capital_recovery_factor =
522             (this->real_discount_annual * pow(1 + this->real_discount_annual, n_years)) /
523             (pow(1 + this->real_discount_annual, n_years) - 1);
524
525         double total_annualized_cost = capital_recovery_factor *
526             this->net_present_cost;
527
528         this->levellized_cost_of_energy_kWh =
529             (n_years * total_annualized_cost) /
530             this->total_dispatch_kWh;
531     }
532 }
533
534 return;
535 } /* computeEconomics() */
```

### 4.19.3.8 computeRealDiscountAnnual()

```
double Production::computeRealDiscountAnnual (
    double nominal_inflation_annual,
    double nominal_discount_annual )
```

Method to compute the real, annual discount rate to be used in computing model economics. This enables application of the discount factor approach.

Ref: [HOMER \[2023h\]](#)

Ref: [HOMER \[2023b\]](#)

#### Parameters

<i>nominal_inflation_annual</i>	The nominal, annual inflation rate to use in computing model economics.
<i>nominal_discount_annual</i>	The nominal, annual discount rate to use in computing model economics.

#### Returns

The real, annual discount rate to use in computing model economics.

```

467 {
468     double real_discount_annual = nominal_discount_annual - nominal_inflation_annual;
469     real_discount_annual /= 1 + nominal_inflation_annual;
470
471     return real_discount_annual;
472 } /* __computeRealDiscountAnnual() */

```

#### 4.19.3.9 getProductionkW()

```

double Production::getProductionkW (
    int timestep )

```

A method to simply fetch the normalized production at a particular point in the given normalized production time series, multiply by the rated capacity of the asset, and return.

#### Returns

The production [kW] for the asset at the given point in time, as defined by the given normalized production time series.

```

555 {
556     double production_kW =
557         this->normalized_production_vec[timestep] * this->capacity_kW;
558
559     return production_kW;
560 } /* getProductionkW() */

```

#### 4.19.3.10 handleReplacement()

```

void Production::handleReplacement (
    int timestep ) [virtual]

```

Method to handle asset replacement and capital cost incursion, if applicable.

#### Parameters

<i>timestep</i>	The current time step of the <a href="#">Model</a> run.
-----------------	---

Reimplemented in [Wind](#), [Wave](#), [Tidal](#), [Solar](#), [Renewable](#), [Noncombustion](#), [Hydro](#), [Diesel](#), and [Combustion](#).

```
424 {  
425     // 1. reset attributes  
426     this->is_running = false;  
427  
428     // 2. log replacement  
429     this->n_replacements++;  
430  
431     // 3. incur capital cost in timestep  
432     this->capital_cost_vec[timestep] = this->capital_cost;  
433  
434     return;  
435 } /* __handleReplacement() */
```

## 4.19.4 Member Data Documentation

### 4.19.4.1 capacity\_kW

```
double Production::capacity_kW
```

The rated production capacity [kW] of the asset.

### 4.19.4.2 capital\_cost

```
double Production::capital_cost
```

The capital cost of the asset (undefined currency).

### 4.19.4.3 capital\_cost\_vec

```
std::vector<double> Production::capital_cost_vec
```

A vector of capital costs (undefined currency) incurred over each modelling time step. These costs are not discounted (i.e., these are actual costs).

### 4.19.4.4 curtailment\_vec\_kW

```
std::vector<double> Production::curtailment_vec_kW
```

A vector of curtailment [kW] at each point in the modelling time series. Curtailment is the amount of production that can be neither dispatched nor stored, and is hence curtailed.

#### 4.19.4.5 dispatch\_vec\_kW

```
std::vector<double> Production::dispatch_vec_kW
```

A vector of dispatch [kW] at each point in the modelling time series. Dispatch is the amount of production that is sent to the grid to satisfy load.

#### 4.19.4.6 interpolator

```
Interpolator Production::interpolator
```

[Interpolator](#) component of [Production](#).

#### 4.19.4.7 is\_running

```
bool Production::is_running
```

A boolean which indicates whether or not the asset is running.

#### 4.19.4.8 is\_running\_vec

```
std::vector<bool> Production::is_running_vec
```

A boolean vector for tracking if the asset is running at a particular point in time.

#### 4.19.4.9 is\_sunk

```
bool Production::is_sunk
```

A boolean which indicates whether or not the asset should be considered a sunk cost (i.e., capital cost incurred at the start of the model, or no).

#### 4.19.4.10 levlized\_cost\_of\_energy\_kWh

```
double Production::levellized_cost_of_energy_kWh
```

The levlized cost of energy [1/kWh] (undefined currency) of this asset. This metric considers only dispatch.

**4.19.4.11 n\_points**

```
int Production::n_points
```

The number of points in the modelling time series.

**4.19.4.12 n\_replacements**

```
int Production::n_replacements
```

The number of times the asset has been replaced.

**4.19.4.13 n\_starts**

```
int Production::n_starts
```

The number of times the asset has been started.

**4.19.4.14 n\_years**

```
double Production::n_years
```

The number of years being modelled.

**4.19.4.15 net\_present\_cost**

```
double Production::net_present_cost
```

The net present cost of this asset.

**4.19.4.16 nominal\_discount\_annual**

```
double Production::nominal_discount_annual
```

The nominal, annual discount rate to use in computing model economics.

#### 4.19.4.17 nominal\_inflation\_annual

```
double Production::nominal_inflation_annual
```

The nominal, annual inflation rate to use in computing model economics.

#### 4.19.4.18 normalized\_production\_series\_given

```
bool Production::normalized_production_series_given
```

A boolean which indicates whether or not a normalized production time series is given.

#### 4.19.4.19 normalized\_production\_vec

```
std::vector<double> Production::normalized_production_vec
```

A vector of normalized production [ ] at each point in the modelling time series.

#### 4.19.4.20 operation\_maintenance\_cost\_kWh

```
double Production::operation_maintenance_cost_kWh
```

The operation and maintenance cost of the asset [1/kWh] (undefined currency). This is a cost incurred per unit of energy produced.

#### 4.19.4.21 operation\_maintenance\_cost\_vec

```
std::vector<double> Production::operation_maintenance_cost_vec
```

A vector of operation and maintenance costs (undefined currency) incurred over each modelling time step. These costs are not discounted (i.e., these are actual costs).

#### 4.19.4.22 path\_2\_normalized\_production\_time\_series

```
std::string Production::path_2_normalized_production_time_series
```

A string defining the path (either relative or absolute) to the given normalized production time series.

#### 4.19.4.23 print\_flag

```
bool Production::print_flag
```

A flag which indicates whether or not object construct/destruction should be verbose.

#### 4.19.4.24 production\_vec\_kW

```
std::vector<double> Production::production_vec_kW
```

A vector of production [kW] at each point in the modelling time series.

#### 4.19.4.25 real\_discount\_annual

```
double Production::real_discount_annual
```

The real, annual discount rate used in computing model economics. Is computed from the given nominal inflation and discount rates.

#### 4.19.4.26 replace\_running\_hrs

```
double Production::replace_running_hrs
```

The number of running hours after which the asset must be replaced.

#### 4.19.4.27 running\_hours

```
double Production::running_hours
```

The number of hours for which the asset has been operating.

#### 4.19.4.28 storage\_vec\_kW

```
std::vector<double> Production::storage_vec_kW
```

A vector of storage [kW] at each point in the modelling time series. [Storage](#) is the amount of production that is sent to storage.

#### 4.19.4.29 total\_dispatch\_kWh

```
double Production::total_dispatch_kWh
```

The total energy dispatched [kWh] over the [Model](#) run.

#### 4.19.4.30 type\_str

```
std::string Production::type_str
```

A string describing the type of the asset.

The documentation for this class was generated from the following files:

- header/Production/[Production.h](#)
- source/Production/[Production.cpp](#)

## 4.20 ProductionInputs Struct Reference

A structure which bundles the necessary inputs for the [Production](#) constructor. Provides default values for every necessary input.

```
#include <Production.h>
```

### Public Attributes

- bool [print\\_flag](#) = false  
*A flag which indicates whether or not object construct/destruction should be verbose.*
- bool [is\\_sunk](#) = false  
*A boolean which indicates whether or not the asset should be considered a sunk cost (i.e., capital cost incurred at the start of the model, or no).*
- double [capacity\\_kW](#) = 100  
*The rated production capacity [kW] of the asset.*
- double [nominal\\_inflation\\_annual](#) = 0.02  
*The nominal, annual inflation rate to use in computing model economics.*
- double [nominal\\_discount\\_annual](#) = 0.04  
*The nominal, annual discount rate to use in computing model economics.*
- double [replace\\_running\\_hrs](#) = 90000  
*The number of running hours after which the asset must be replaced.*
- std::string [path\\_2\\_normalized\\_production\\_time\\_series](#) = ""  
*A string defining the path (either relative or absolute) to the given normalized production time series.*

#### 4.20.1 Detailed Description

A structure which bundles the necessary inputs for the [Production](#) constructor. Provides default values for every necessary input.

## 4.20.2 Member Data Documentation

### 4.20.2.1 capacity\_kW

```
double ProductionInputs::capacity_kW = 100
```

The rated production capacity [kW] of the asset.

### 4.20.2.2 is\_sunk

```
bool ProductionInputs::is_sunk = false
```

A boolean which indicates whether or not the asset should be considered a sunk cost (i.e., capital cost incurred at the start of the model, or no).

### 4.20.2.3 nominal\_discount\_annual

```
double ProductionInputs::nominal_discount_annual = 0.04
```

The nominal, annual discount rate to use in computing model economics.

### 4.20.2.4 nominal\_inflation\_annual

```
double ProductionInputs::nominal_inflation_annual = 0.02
```

The nominal, annual inflation rate to use in computing model economics.

### 4.20.2.5 path\_2\_normalized\_production\_time\_series

```
std::string ProductionInputs::path_2_normalized_production_time_series = ""
```

A string defining the path (either relative or absolute) to the given normalized production time series.

#### 4.20.2.6 print\_flag

```
bool ProductionInputs::print_flag = false
```

A flag which indicates whether or not object construct/destruction should be verbose.

#### 4.20.2.7 replace\_running\_hrs

```
double ProductionInputs::replace_running_hrs = 90000
```

The number of running hours after which the asset must be replaced.

The documentation for this struct was generated from the following file:

- header/Production/[Production.h](#)

## 4.21 Renewable Class Reference

The root of the [Renewable](#) branch of the [Production](#) hierarchy. This branch contains derived classes which model the renewable production of energy.

```
#include <Renewable.h>
```

### 4.21.1 Detailed Description

The root of the [Renewable](#) branch of the [Production](#) hierarchy. This branch contains derived classes which model the renewable production of energy.

### 4.21.2 Constructor & Destructor Documentation

#### 4.21.2.1 `Renewable()` [1/2]

```
Renewable::Renewable (
    void )
```

Constructor (dummy) for the [Renewable](#) class.

```
125 {
126     //...
127
128     return;
129 } /* Renewable() */
```

#### 4.21.2.2 `Renewable()` [2/2]

```
Renewable::Renewable (
    int n_points,
    double n_years,
    RenewableInputs renewable_inputs,
    std::vector< double > * time_vec_hrs_ptr )
```

Constructor (intended) for the [Renewable](#) class.

#### Parameters

<code>n_points</code>	The number of points in the modelling time series.
<code>n_years</code>	The number of years being modelled.
<code>renewable_inputs</code>	A structure of <a href="#">Renewable</a> constructor inputs.
<code>time_vec_hrs_ptr</code>	A pointer to the vector containing the modelling time series.

```

161 :
162 Production(
163     n_points,
164     n_years,
165     renewable_inputs.production_inputs,
166     time_vec_hrs_ptr
167 )
168 {
169     // 1. check inputs
170     this->__checkInputs(renewable_inputs);
171
172     // 2. set attributes
173     //...
174
175     // 3. construction print
176     if (this->print_flag) {
177         std::cout << "Renewable object constructed at " << this << std::endl;
178     }
179
180     return;
181 } /* Renewable() */

```

#### 4.21.2.3 ~Renewable()

```

Renewable::~~Renewable (
    void ) [virtual]

```

Destructor for the [Renewable](#) class.

```

384 {
385     // 1. destruction print
386     if (this->print_flag) {
387         std::cout << "Renewable object at " << this << " destroyed" << std::endl;
388     }
389
390     return;
391 } /* ~Renewable() */

```

### 4.21.3 Member Function Documentation

#### 4.21.3.1 \_\_checkInputs()

```

void Renewable::__checkInputs (
    RenewableInputs renewable_inputs ) [private]

```

Helper method to check inputs to the [Renewable](#) constructor.

```

62 {
63     //...
64
65     return;
66 } /* __checkInputs() */

```

#### 4.21.3.2 \_\_handleStartStop()

```
void Renewable::__handleStartStop (
    int timestep,
    double dt_hrs,
    double production_kW ) [private]
```

Helper method to handle the starting/stopping of the renewable asset.

```
89 {
90     if (this->is_running) {
91         // handle stopping
92         if (production_kW <= 0) {
93             this->is_running = false;
94         }
95     }
96
97     else {
98         // handle starting
99         if (production_kW > 0) {
100             this->is_running = true;
101             this->n_starts++;
102         }
103     }
104
105     return;
106 } /* __handleStartStop() */
```

#### 4.21.3.3 \_\_writeSummary()

```
virtual void Renewable::__writeSummary (
    std::string ) [inline], [private], [virtual]
```

Reimplemented in [Wind](#), [Wave](#), [Tidal](#), and [Solar](#).

```
97 {return;}
```

#### 4.21.3.4 \_\_writeTimeSeries()

```
virtual void Renewable::__writeTimeSeries (
    std::string ,
    std::vector< double > * ,
    std::map< int, std::vector< double >> * ,
    std::map< int, std::vector< std::vector< double >>> * ,
    int = -1 ) [inline], [private], [virtual]
```

Reimplemented in [Wind](#), [Wave](#), [Tidal](#), and [Solar](#).

```
104 {return;}
```

#### 4.21.3.5 commit()

```
double Renewable::commit (
    int timestep,
    double dt_hrs,
    double production_kW,
    double load_kW ) [virtual]
```

Method which takes in production and load for the current timestep, computes and records dispatch and curtailment, and then returns remaining load.

## Parameters

<i>timestep</i>	The timestep (i.e., time series index) for the request.
<i>dt_hrs</i>	The interval of time [hrs] associated with the timestep.
<i>production_kW</i>	The production [kW] of the asset in this timestep.
<i>load_kW</i>	The load [kW] passed to the asset in this timestep.

## Returns

The load [kW] remaining after the dispatch is deducted from it.

Reimplemented from [Production](#).

Reimplemented in [Wind](#), [Wave](#), [Tidal](#), and [Solar](#).

```

265 {
266     // 1. handle start/stop
267     this->__handleStartStop(timestep, dt_hrs, production_kW);
268
269     // 2. invoke base class method
270     load_kW = Production::commit(
271         timestep,
272         dt_hrs,
273         production_kW,
274         load_kW
275     );
276
277
278     //...
279
280     return load_kW;
281 } /* commit() */

```

## 4.21.3.6 computeEconomics()

```

void Renewable::computeEconomics (
    std::vector< double > * time_vec_hrs_ptr ) [virtual]

```

Helper method to compute key economic metrics for the [Model](#) run.

## Parameters

<i>time_vec_hrs_ptr</i>	A pointer to the <i>time_vec_hrs</i> attribute of the <a href="#">ElectricalLoad</a> .
-------------------------	--

Reimplemented from [Production](#).

```

224 {
225     // 1. invoke base class method
226     Production::computeEconomics(time_vec_hrs_ptr);
227
228     return;
229 } /* computeEconomics() */

```

## 4.21.3.7 computeProductionkW() [1/2]

```

virtual double Renewable::computeProductionkW (
    int ,

```

```
double ,
double ) [inline], [virtual]
```

Reimplemented in [Wind](#), [Tidal](#), and [Solar](#).

```
121 {return 0;}
```

#### 4.21.3.8 computeProductionkW() [2/2]

```
virtual double Renewable::computeProductionkW (
    int ,
    double ,
    double ,
    double ) [inline], [virtual]
```

Reimplemented in [Wave](#).

```
122 {return 0;}
```

#### 4.21.3.9 handleReplacement()

```
void Renewable::handleReplacement (
    int timestep ) [virtual]
```

Method to handle asset replacement and capital cost incursion, if applicable.

##### Parameters

<i>timestep</i>	The current time step of the <a href="#">Model</a> run.
-----------------	---

Reimplemented from [Production](#).

Reimplemented in [Wind](#), [Wave](#), [Tidal](#), and [Solar](#).

```
199 {
200     // 1. reset attributes
201     //...
202
203     // 2. invoke base class method
204     Production :: handleReplacement(timestep);
205
206     return;
207 } /* __handleReplacement() */
```

#### 4.21.3.10 writeResults()

```
void Renewable::writeResults (
    std::string write_path,
    std::vector< double > * time_vec_hrs_ptr,
    std::map< int, std::vector< double >> * resource_map_1D_ptr,
    std::map< int, std::vector< std::vector< double >>> * resource_map_2D_ptr,
    int renewable_index,
    int max_lines = -1 )
```

Method which writes [Renewable](#) results to an output directory.

## Parameters

<i>write_path</i>	A path (either relative or absolute) to the directory location where results are to be written. If already exists, will overwrite.
<i>time_vec_hrs_ptr</i>	A pointer to the <code>time_vec_hrs</code> attribute of the <a href="#">ElectricalLoad</a> .
<i>resource_map_1D_ptr</i>	A pointer to the 1D map of <a href="#">Resources</a> .
<i>resource_map_2D_ptr</i>	A pointer to the 2D map of <a href="#">Resources</a> .
<i>renewable_index</i>	An integer which corresponds to the index of the <a href="#">Renewable</a> asset in the <a href="#">Model</a> .
<i>max_lines</i>	The maximum number of lines of output to write. If $<0$ , then all available lines are written. If $=0$ , then only summary results are written.

```

325 {
326     // 1. handle sentinel
327     if (max_lines < 0) {
328         max_lines = this->n_points;
329     }
330
331     // 2. create subdirectories
332     write_path += "Production/";
333     if (not std::filesystem::is_directory(write_path)) {
334         std::filesystem::create_directory(write_path);
335     }
336
337     write_path += "Renewable/";
338     if (not std::filesystem::is_directory(write_path)) {
339         std::filesystem::create_directory(write_path);
340     }
341
342     write_path += this->type_str;
343     write_path += "_";
344     write_path += std::to_string(int(ceil(this->capacity_kw)));
345     write_path += "kW_idx";
346     write_path += std::to_string(renewable_index);
347     write_path += "/";
348     std::filesystem::create_directory(write_path);
349
350     // 3. write summary
351     this->__writeSummary(write_path);
352
353     // 4. write time series
354     if (max_lines > this->n_points) {
355         max_lines = this->n_points;
356     }
357
358     if (max_lines > 0) {
359         this->__writeTimeSeries(
360             write_path,
361             time_vec_hrs_ptr,
362             resource_map_1D_ptr,
363             resource_map_2D_ptr,
364             max_lines
365         );
366     }
367
368     return;
369 } /* writeResults() */

```

## 4.21.4 Member Data Documentation

## 4.21.4.1 resource\_key

```
int Renewable::resource_key
```

A key used to index into the [Resources](#) object, to associate this asset with the appropriate resource time series.

#### 4.21.4.2 type

`RenewableType` `Renewable::type`

The type (`RenewableType`) of the asset.

The documentation for this class was generated from the following files:

- `header/Production/Renewable/Renewable.h`
- `source/Production/Renewable/Renewable.cpp`

## 4.22 RenewableInputs Struct Reference

A structure which bundles the necessary inputs for the `Renewable` constructor. Provides default values for every necessary input. Note that this structure encapsulates `ProductionInputs`.

```
#include <Renewable.h>
```

Collaboration diagram for `RenewableInputs`:

### Public Attributes

- `ProductionInputs production_inputs`  
*An encapsulated `ProductionInputs` instance.*

#### 4.22.1 Detailed Description

A structure which bundles the necessary inputs for the `Renewable` constructor. Provides default values for every necessary input. Note that this structure encapsulates `ProductionInputs`.

#### 4.22.2 Member Data Documentation

### 4.22.2.1 production\_inputs

`ProductionInputs RenewableInputs::production_inputs`

An encapsulated `ProductionInputs` instance.

The documentation for this struct was generated from the following file:

- header/Production/Renewable/[Renewable.h](#)

## 4.23 Resources Class Reference

A class which contains renewable resource data. Intended to serve as a component class of `Model`.

```
#include <Resources.h>
```

### Public Member Functions

- [Resources](#) (void)  
*Constructor for the [Resources](#) class.*
- void [addResource](#) ([NoncombustionType](#), std::string, int, [ElectricalLoad](#) \*)  
*A method to add a renewable resource time series to [Resources](#). Checks if given resource key is already in use. The associated helper methods also check against [ElectricalLoad](#) to ensure that all added time series align with the electrical load time series (both in terms of length and which points in time are included).*
- void [addResource](#) ([RenewableType](#), std::string, int, [ElectricalLoad](#) \*)  
*A method to add a renewable resource time series to [Resources](#). Checks if given resource key is already in use. The associated helper methods also check against [ElectricalLoad](#) to ensure that all added time series align with the electrical load time series (both in terms of length and which points in time are included).*
- void [clear](#) (void)  
*Method to clear all attributes of the [Resources](#) object.*
- [~Resources](#) (void)  
*Destructor for the [Resources](#) class.*

### Public Attributes

- std::map< int, std::vector< double > > [resource\\_map\\_1D](#)  
*A map <int, vector<double>> of given 1D renewable resource time series.*
- std::map< int, std::string > [string\\_map\\_1D](#)  
*A map <int, string> of descriptors for the type of the given 1D renewable resource time series.*
- std::map< int, std::string > [path\\_map\\_1D](#)  
*A map <int, string> of the paths (either relative or absolute) to given 1D renewable resource time series.*
- std::map< int, std::vector< std::vector< double > > > [resource\\_map\\_2D](#)  
*A map <int, vector<vector<double>>> of given 2D renewable resource time series.*
- std::map< int, std::string > [string\\_map\\_2D](#)  
*A map <int, string> of descriptors for the type of the given 2D renewable resource time series.*
- std::map< int, std::string > [path\\_map\\_2D](#)  
*A map <int, string> of the paths (either relative or absolute) to given 2D renewable resource time series.*

## Private Member Functions

- void `__checkResourceKey1D` (int, [RenewableType](#))  
*Helper method to check if given resource key (1D) is already in use.*
- void `__checkResourceKey2D` (int, [RenewableType](#))  
*Helper method to check if given resource key (2D) is already in use.*
- void `__checkResourceKey1D` (int, [NoncombustionType](#))  
*Helper method to check if given resource key (1D) is already in use.*
- void `__checkTimePoint` (double, double, std::string, [ElectricalLoad](#) \*)  
*Helper method to check received time point against expected time point. The given time series should align point-wise with the previously given electrical load time series.*
- void `__throwLengthError` (std::string, [ElectricalLoad](#) \*)  
*Helper method to throw data length error (if not the same as the given electrical load time series).*
- void `__readHydroResource` (std::string, int, [ElectricalLoad](#) \*)  
*Helper method to handle reading a hydro resource time series into [Resources](#).*

*Helper method to handle reading a wave resource time series into [Resources](#).*
- void `__readWindResource` (std::string, int, [ElectricalLoad](#) \*)  
*Helper method to handle reading a wind resource time series into [Resources](#).*

### 4.23.1 Detailed Description

A class which contains renewable resource data. Intended to serve as a component class of [Model](#).

### 4.23.2 Constructor & Destructor Documentation

#### 4.23.2.1 Resources()

```
Resources::Resources (
    void )
```

Constructor for the [Resources](#) class.

```
755 {
756     return;
757 } /* Resources() */
```

#### 4.23.2.2 ~Resources()

```
Resources::~~Resources (
    void )
```

Destructor for the [Resources](#) class.

```
967 {
968     this->clear();
969     return;
970 } /* ~Resources() */
```

### 4.23.3 Member Function Documentation

#### 4.23.3.1 `__checkResourceKey1D()` [1/2]

```
void Resources::__checkResourceKey1D (
    int resource_key,
    NoncombustionType noncombustion_type ) [private]
```

Helper method to check if given resource key (1D) is already in use.

##### Parameters

<i>resource_key</i>	The key associated with the given renewable resource.
<i>noncombustion_type</i>	The type of renewable resource being added to <a href="#">Resources</a> .

```
139 {
140     if (this->resource_map_1D.count(resource_key) > 0) {
141         std::string error_str = "ERROR: Resources::addResource(";
142
143         switch (noncombustion_type) {
144             case (NoncombustionType :: HYDRO): {
145                 error_str += "HYDRO): ";
146
147                 break;
148             }
149
150             default: {
151                 error_str += "UNDEFINED_TYPE): ";
152
153                 break;
154             }
155         }
156
157         error_str += "resource key (1D) ";
158         error_str += std::to_string(resource_key);
159         error_str += " is already in use";
160
161         #ifdef _WIN32
162             std::cout << error_str << std::endl;
163         #endif
164
165         throw std::invalid_argument(error_str);
166     }
167
168     return;
169 } /* __checkResourceKey1D() */
```

#### 4.23.3.2 `__checkResourceKey1D()` [2/2]

```
void Resources::__checkResourceKey1D (
    int resource_key,
    RenewableType renewable_type ) [private]
```

Helper method to check if given resource key (1D) is already in use.

##### Parameters

<i>resource_key</i>	The key associated with the given renewable resource.
<i>renewable_type</i>	The type of renewable resource being added to <a href="#">Resources</a> .

```

72 {
73     if (this->resource_map_1D.count(resource_key) > 0) {
74         std::string error_str = "ERROR:  Resources::addResource(";
75
76         switch (renewable_type) {
77             case (RenewableType :: SOLAR): {
78                 error_str += "SOLAR):  ";
79
80                 break;
81             }
82
83             case (RenewableType :: TIDAL): {
84                 error_str += "TIDAL):  ";
85
86                 break;
87             }
88
89             case (RenewableType :: WIND): {
90                 error_str += "WIND):  ";
91
92                 break;
93             }
94
95             default: {
96                 error_str += "UNDEFINED_TYPE):  ";
97
98                 break;
99             }
100         }
101
102         error_str += "resource key (1D) ";
103         error_str += std::to_string(resource_key);
104         error_str += " is already in use";
105
106         #ifdef _WIN32
107             std::cout << error_str << std::endl;
108         #endif
109
110         throw std::invalid_argument(error_str);
111     }
112
113     return;
114 } /* __checkResourceKey1D() */

```

#### 4.23.3.3 \_\_checkResourceKey2D()

```

void Resources::__checkResourceKey2D (
    int resource_key,
    RenewableType renewable_type ) [private]

```

Helper method to check if given resource key (2D) is already in use.

##### Parameters

<i>resource_key</i>	The key associated with the given renewable resource.
---------------------	---

```

192 {
193     if (this->resource_map_2D.count(resource_key) > 0) {
194         std::string error_str = "ERROR:  Resources::addResource(";
195
196         switch (renewable_type) {
197             case (RenewableType :: WAVE): {
198                 error_str += "WAVE):  ";
199
200                 break;
201             }
202
203             default: {
204                 error_str += "UNDEFINED_TYPE):  ";
205
206                 break;
207             }
208         }
209

```

```

210     error_str += "resource key (2D) ";
211     error_str += std::to_string(resource_key);
212     error_str += " is already in use";
213
214     #ifdef _WIN32
215         std::cout << error_str << std::endl;
216     #endif
217
218     throw std::invalid_argument(error_str);
219 }
220
221 return;
222 } /* __checkResourceKey2D() */

```

#### 4.23.3.4 \_\_checkTimePoint()

```

void Resources::__checkTimePoint (
    double time_received_hrs,
    double time_expected_hrs,
    std::string path_2_resource_data,
    ElectricalLoad * electrical_load_ptr ) [private]

```

Helper method to check received time point against expected time point. The given time series should align point-wise with the previously given electrical load time series.

##### Parameters

<i>time_received_hrs</i>	The point in time received from the given data.
<i>time_expected_hrs</i>	The point in time expected (this comes from the electrical load time series).
<i>path_2_resource_data</i>	The path (either relative or absolute) to the given resource time series.
<i>electrical_load_ptr</i>	A pointer to the <a href="#">Model's ElectricalLoad</a> object.

```

259 {
260     if (time_received_hrs != time_expected_hrs) {
261         std::string error_str = "ERROR: Resources::addResource(): ";
262         error_str += "the given resource time series at ";
263         error_str += path_2_resource_data;
264         error_str += " does not align with the ";
265         error_str += "previously given electrical load time series at ";
266         error_str += electrical_load_ptr->path_2_electrical_load_time_series;
267
268         #ifdef _WIN32
269             std::cout << error_str << std::endl;
270         #endif
271
272         throw std::runtime_error(error_str);
273     }
274
275     return;
276 } /* __checkTimePoint() */

```

#### 4.23.3.5 \_\_readHydroResource()

```

void Resources::__readHydroResource (
    std::string path_2_resource_data,
    int resource_key,
    ElectricalLoad * electrical_load_ptr ) [private]

```

Helper method to handle reading a hydro resource time series into [Resources](#).

## Parameters

<i>path_2_resource_data</i>	The path (either relative or absolute) to the given resource time series.
<i>resource_key</i>	The key associated with the given renewable resource.
<i>electrical_load_ptr</i>	A pointer to the <a href="#">Model's ElectricalLoad</a> object.

```

348 {
349     // 1. init CSV reader, record path and type
350     io::CSVReader<2> CSV(path_2_resource_data);
351
352     CSV.read_header(
353         io::ignore_extra_column,
354         "Time (since start of data) [hrs]",

## 4.23.3.9 \_\_readWindResource()

```

void Resources::__readWindResource (
    std::string path_2_resource_data,
    int resource_key,
    ElectricalLoad * electrical_load_ptr ) [private]

```

Helper method to handle reading a wind resource time series into [Resources](#).

## Parameters

<i>path_2_resource_data</i>	The path (either relative or absolute) to the given resource time series.
<i>resource_key</i>	The key associated with the given renewable resource.
<i>electrical_load_ptr</i>	A pointer to the <a href="#">Model's ElectricalLoad</a> object.

```

683 {
684     // 1. init CSV reader, record path and type
685     io::CSVReader<2> CSV(path_2_resource_data);
686
687     CSV.read_header(
688         io::ignore_extra_column,
689         "Time (since start of data) [hrs]",
690         "Wind Speed (hub height) [m/s]"
691     );
692
693     this->path_map_1D.insert(
694         std::pair<int, std::string>(resource_key, path_2_resource_data)
695     );
696
697     this->string_map_1D.insert(std::pair<int, std::string>(resource_key, "WIND"));
698
699     // 2. init map element
700     this->resource_map_1D.insert(
701         std::pair<int, std::vector<double>>(resource_key, {})
702     );
703     this->resource_map_1D[resource_key].resize(electrical_load_ptr->n_points, 0);
704
705
706     // 3. read in resource data, check against time series (point-wise and length)

733     }
734
735     return;
736 } /* __readWindResource() */

```

## 4.23.3.10 \_\_throwLengthError()

```

void Resources::__throwLengthError (
    std::string path_2_resource_data,
    ElectricalLoad * electrical_load_ptr ) [private]

```

Helper method to throw data length error (if not the same as the given electrical load time series).

## Parameters

<i>path_2_resource_data</i>	The path (either relative or absolute) to the given resource time series.
<i>electrical_load_ptr</i>	A pointer to the <a href="#">Model's ElectricalLoad</a> object.

```

303 {
304     std::string error_str = "ERROR: Resources::addResource(): ";
305     error_str += "the given resource time series at ";
306     error_str += path_2_resource_data;
307     error_str += " is not the same length as the previously given electrical";
308     error_str += " load time series at ";
309     error_str += electrical_load_ptr->path_2_electrical_load_time_series;
310
311     #ifdef _WIN32
312         std::cout << error_str << std::endl;
313     #endif
314
315     throw std::runtime_error(error_str);
316
317     return;
318 } /* __throwLengthError() */

```

#### 4.23.3.11 addResource() [1/2]

```

void Resources::addResource (
    NoncombustionType noncombustion_type,
    std::string path_2_resource_data,
    int resource_key,
    ElectricalLoad * electrical_load_ptr )

```

A method to add a renewable resource time series to [Resources](#). Checks if given resource key is already in use. The associated helper methods also check against [ElectricalLoad](#) to ensure that all added time series align with the electrical load time series (both in terms of length and which points in time are included).

##### Parameters

<i>noncombustion_type</i>	The type of renewable resource being added to <a href="#">Resources</a> .
<i>path_2_resource_data</i>	A string defining the path (either relative or absolute) to the given resource time series.
<i>resource_key</i>	A key used to index into the <a href="#">Resources</a> object, used to associate <a href="#">Renewable</a> assets with the corresponding resource.
<i>electrical_load_ptr</i>	A pointer to the <a href="#">Model's ElectricalLoad</a> object.

```

794 {
795     switch (noncombustion_type) {
796         case (NoncombustionType :: HYDRO): {
797             this->__checkResourceKey1D(resource_key, noncombustion_type);
798
799             this->__readHydroResource (
800                 path_2_resource_data,
801                 resource_key,
802                 electrical_load_ptr
803             );
804
805             break;
806         }
807

809             std::string error_str = "ERROR: Resources :: addResource(): ";
810             error_str += "noncombustion type ";
811             error_str += std::to_string(noncombustion_type);
812             error_str += " has no associated resource";
813
814             #ifdef _WIN32
815                 std::cout << error_str << std::endl;
816             #endif
817
818             throw std::runtime_error(error_str);
819
820             break;
821         }
822     }
823
824     return;

```

```
825 } /* addResource() */
```

#### 4.23.3.12 addResource() [2/2]

```
void Resources::addResource (
    RenewableType renewable_type,
    std::string path_2_resource_data,
    int resource_key,
    ElectricalLoad * electrical_load_ptr )
```

A method to add a renewable resource time series to [Resources](#). Checks if given resource key is already in use. The associated helper methods also check against [ElectricalLoad](#) to ensure that all added time series align with the electrical load time series (both in terms of length and which points in time are included).

##### Parameters

<i>renewable_type</i>	The type of renewable resource being added to <a href="#">Resources</a> .
<i>path_2_resource_data</i>	A string defining the path (either relative or absolute) to the given resource time series.
<i>resource_key</i>	A key used to index into the <a href="#">Resources</a> object, used to associate <a href="#">Renewable</a> assets with the corresponding resource.
<i>electrical_load_ptr</i>	A pointer to the <a href="#">Model's ElectricalLoad</a> object.

```
862 {
863     switch (renewable_type) {
864         case (RenewableType :: SOLAR): {
865             this->__checkResourceKey1D(resource_key, renewable_type);

925     }
926 }
927
928 return;
929 } /* addResource() */

```

#### 4.23.3.13 clear()

```

void Resources::clear (
    void )

```

Method to clear all attributes of the [Resources](#) object.

```

943 {
944     this->resource_map_1D.clear();
945     this->string_map_1D.clear();
946     this->path_map_1D.clear();
947
948     this->resource_map_2D.clear();
949     this->string_map_2D.clear();
950     this->path_map_2D.clear();
951
952     return;
953 } /* clear() */

```

### 4.23.4 Member Data Documentation

#### 4.23.4.1 path\_map\_1D

```
std::map<int, std::string> Resources::path_map_1D
```

A map <int, string> of the paths (either relative or absolute) to given 1D renewable resource time series.

#### 4.23.4.2 path\_map\_2D

```
std::map<int, std::string> Resources::path_map_2D
```

A map <int, string> of the paths (either relative or absolute) to given 2D renewable resource time series.

#### 4.23.4.3 resource\_map\_1D

```
std::map<int, std::vector<double> > Resources::resource_map_1D
```

A map <int, vector<double>> of given 1D renewable resource time series.

#### 4.23.4.4 resource\_map\_2D

```
std::map<int, std::vector<std::vector<double> > > Resources::resource_map_2D
```

A map <int, vector<vector<double>>> of given 2D renewable resource time series.

#### 4.23.4.5 string\_map\_1D

```
std::map<int, std::string> Resources::string_map_1D
```

A map <int, string> of descriptors for the type of the given 1D renewable resource time series.

#### 4.23.4.6 string\_map\_2D

```
std::map<int, std::string> Resources::string_map_2D
```

A map <int, string> of descriptors for the type of the given 2D renewable resource time series.

### 4.24.1 Detailed Description

A derived class of the [Renewable](#) branch of [Production](#) which models solar production.

### 4.24.2 Constructor & Destructor Documentation

**4.24.2.1 Solar()** [1/2]

```
Solar::Solar (
    void )
```

Constructor (dummy) for the [Solar](#) class.

```
322 {
323     //...
324
325     return;
326 } /* Solar() */
```

**4.24.2.2 Solar()** [2/2]

```
Solar::Solar (
    int n_points,
    double n_years,
    SolarInputs solar_inputs,
    std::vector< double > * time_vec_hrs_ptr )
```

Constructor (intended) for the [Solar](#) class.

**Parameters**

<i>n_points</i>	The number of points in the modelling time series.
<i>n_years</i>	The number of years being modelled.
<i>solar_inputs</i>	A structure of <a href="#">Solar</a> constructor inputs.
<i>time_vec_hrs_ptr</i>	A pointer to the vector containing the modelling time series.

```
358 :
359 Renewable(
360     n_points,
361     n_years,
362     solar_inputs.renewable_inputs,
363     time_vec_hrs_ptr
364 )
365 {
366     // 1. check inputs
367     this->__checkInputs(solar_inputs);
368
369     // 2. set attributes
370     this->type = RenewableType :: SOLAR;
371     this->type_str = "SOLAR";
372
373     this->resource_key = solar_inputs.resource_key;
374
375     this->derating = solar_inputs.derating;
376
377     if (solar_inputs.capital_cost < 0) {
378         this->capital_cost = this->__getGenericCapitalCost();
379     }
380     else {
381         this->capital_cost = solar_inputs.capital_cost;
382     }
383
384     if (solar_inputs.operation_maintenance_cost_kWh < 0) {
385         this->operation_maintenance_cost_kWh = this->__getGenericOpMaintCost();
386     }
387     else {
388         this->operation_maintenance_cost_kWh =
389             solar_inputs.operation_maintenance_cost_kWh;
390     }
391
392     if (not this->is_sunk) {
393         this->capital_cost_vec[0] = this->capital_cost;
394     }
395 }
```

```

396     // 3. construction print
397     if (this->print_flag) {
398         std::cout << "Solar object constructed at " << this << std::endl;
399     }
400
401     return;
402 } /* Renewable() */

```

#### 4.24.2.3 ~Solar()

```

Solar::~~Solar (
    void )

```

Destructor for the [Solar](#) class.

```

548 {
549     // 1. destruction print
550     if (this->print_flag) {
551         std::cout << "Solar object at " << this << " destroyed" << std::endl;
552     }
553
554     return;
555 } /* ~Solar() */

```

### 4.24.3 Member Function Documentation

#### 4.24.3.1 \_\_checkInputs()

```

void Solar::__checkInputs (
    SolarInputs solar_inputs ) [private]

```

Helper method to check inputs to the [Solar](#) constructor.

```

62 {
63     // 1. check derating
64     if (
65         solar_inputs.derating < 0 or
66         solar_inputs.derating > 1
67     ) {
68         std::string error_str = "ERROR: Solar(): ";
69         error_str += "SolarInputs::derating must be in the closed interval [0, 1]";
70
71         #ifdef _WIN32
72             std::cout << error_str << std::endl;
73         #endif
74
75         throw std::invalid_argument(error_str);
76     }
77
78     return;
79 } /* __checkInputs() */

```

**4.24.3.2 \_\_getGenericCapitalCost()**

```
double Solar::__getGenericCapitalCost (
    void ) [private]
```

Helper method to generate a generic solar PV array capital cost.

This model was obtained by way of surveying an assortment of published solar PV costs, and then constructing a best fit model. Note that this model expresses cost in terms of Canadian dollars [CAD].

**Returns**

A generic capital cost for the solar PV array [CAD].

```
101 {
102     double capital_cost_per_kW = 1000 * pow(this->capacity_kW, -0.15) + 3000;
103
104     return capital_cost_per_kW * this->capacity_kW;
105 } /* __getGenericCapitalCost() */
```

**4.24.3.3 \_\_getGenericOpMaintCost()**

```
double Solar::__getGenericOpMaintCost (
    void ) [private]
```

Helper method to generate a generic solar PV array operation and maintenance cost. This is a cost incurred per unit energy produced.

This model was obtained by way of surveying an assortment of published solar PV costs, and then constructing a best fit model. Note that this model expresses cost in terms of Canadian dollars [CAD/kWh].

**Returns**

A generic operation and maintenance cost, per unit energy produced, for the solar PV array [CAD/kWh].

```
128 {
129     return 0.01;
130 } /* __getGenericOpMaintCost() */
```

**4.24.3.4 \_\_writeSummary()**

```
void Solar::__writeSummary (
    std::string write_path ) [private], [virtual]
```

Helper method to write summary results for [Solar](#).

**Parameters**

<i>write_path</i>	A path (either relative or absolute) to the directory location where results are to be written. If already exists, will overwrite.
-------------------	--

Reimplemented from [Renewable](#).

```

148 {
149     // 1. create filestream
150     write_path += "summary_results.md";
151     std::ofstream ofs;
152     ofs.open(write_path, std::ofstream::out);

```

4.24.3.5 `__writeTimeSeries()`

```
void Solar::__writeTimeSeries (
    std::string write_path,
    std::vector< double > * time_vec_hrs_ptr,
    std::map< int, std::vector< double >> * resource_map_1D_ptr,
    std::map< int, std::vector< std::vector< double >>> * resource_map_2D_ptr,
    int max_lines = -1 ) [private], [virtual]
```

Helper method to write time series results for [Solar](#).

## Parameters

<i>write_path</i>	A path (either relative or absolute) to the directory location where results are to be written. If already exists, will overwrite.
<i>time_vec_hrs_ptr</i>	A pointer to the <code>time_vec_hrs</code> attribute of the <a href="#">ElectricalLoad</a> .
<i>resource_map_1D_ptr</i>	A pointer to the 1D map of <a href="#">Resources</a> .
<i>resource_map_2D_ptr</i>	A pointer to the 2D map of <a href="#">Resources</a> .
<i>max_lines</i>	The maximum number of lines of output to write.

Reimplemented from [Renewable](#).

```
264 {
265     // 1. create filestream
266     write_path += "time_series_results.csv";
267     std::ofstream ofs;
268     ofs.open(write_path, std::ofstream::out);

298         ofs << "\n";
299     }
300
301     ofs.close();
302     return;
303 } /* __writeTimeSeries() */
```

4.24.3.6 `commit()`

```
double Solar::commit (
    int timestep,
```

```
double dt_hrs,
double production_kW,
double load_kW ) [virtual]
```

Method which takes in production and load for the current timestep, computes and records dispatch and curtailment, and then returns remaining load.

#### Parameters

<i>timestep</i>	The timestep (i.e., time series index) for the request.
<i>dt_hrs</i>	The interval of time [hrs] associated with the timestep.
<i>production_kW</i>	The production [kW] of the asset in this timestep.
<i>load_kW</i>	The load [kW] passed to the asset in this timestep.

#### Returns

The load [kW] remaining after the dispatch is deducted from it.

Reimplemented from [Renewable](#).

```
520 {
521     // 1. invoke base class method
522     load_kW = Renewable::commit(
523         timestep,
524         dt_hrs,
525         production_kW,
526         load_kW
527     );
528
529
530     //...
531
532     return load_kW;
533 } /* commit() */
```

#### 4.24.3.7 computeProductionkW()

```
double Solar::computeProductionkW (
    int timestep,
    double dt_hrs,
    double solar_resource_kWm2 ) [virtual]
```

Method which takes in the solar resource at a particular point in time, and then returns the solar PV production at that point in time.

Ref: [HOMER \[2023f\]](#)

#### Parameters

<i>timestep</i>	The timestep (i.e., time series index) for the request.
<i>dt_hrs</i>	The interval of time [hrs] associated with the timestep.
<i>solar_resource_kWm2</i>	<a href="#">Solar</a> resource (i.e. irradiance) [kW/m2].

## Returns

The production [kW] of the solar PV array.

Reimplemented from [Renewable](#).

```

462 {
463     // given production time series override
464     if (this->normalized_production_series_given) {
465         double production_kW = Production :: getProductionkW(timestep);
466
467         return production_kW;
468     }
469
470     // check if no resource
471     if (solar_resource_kWm2 <= 0) {
472         return 0;
473     }
474
475     // compute production
476     double production_kW = this->derating * solar_resource_kWm2 * this->capacity_kW;
477
478     // cap production at capacity
479     if (production_kW > this->capacity_kW) {
480         production_kW = this->capacity_kW;
481     }
482
483     return production_kW;
484 } /* computeProductionkW() */

```

### 4.24.3.8 handleReplacement()

```

void Solar::handleReplacement (
    int timestep ) [virtual]

```

Method to handle asset replacement and capital cost incursion, if applicable.

## Parameters

<i>timestep</i>	The current time step of the <a href="#">Model</a> run.
-----------------	---

Reimplemented from [Renewable](#).

```

420 {
421     // 1. reset attributes
422     //...
423
424     // 2. invoke base class method
425     Renewable :: handleReplacement(timestep);
426
427     return;
428 } /* __handleReplacement() */

```

## 4.24.4 Member Data Documentation

### 4.24.4.1 derating

```
double Solar::derating
```

The derating of the solar PV array (i.e., shadowing, soiling, etc.).

The documentation for this class was generated from the following files:

- header/Production/Renewable/[Solar.h](#)
- source/Production/Renewable/[Solar.cpp](#)

## 4.25 SolarInputs Struct Reference

A structure which bundles the necessary inputs for the [Solar](#) constructor. Provides default values for every necessary input. Note that this structure encapsulates [RenewableInputs](#).

```
#include <Solar.h>
```

Collaboration diagram for SolarInputs:

### Public Attributes

- [RenewableInputs](#) `renewable_inputs`  
An encapsulated [RenewableInputs](#) instance.
- int `resource_key` = 0  
A key used to index into the [Resources](#) object, to associate this asset with the appropriate resource time series.
- double `capital_cost` = -1  
The capital cost of the asset (undefined currency). -1 is a sentinel value, which triggers a generic cost model on construction (in fact, any negative value here will trigger). Note that the generic cost model is in terms of Canadian dollars [CAD].
- double `operation_maintenance_cost_kWh` = -1  
The operation and maintenance cost of the asset [1/kWh] (undefined currency). This is a cost incurred per unit of energy produced. -1 is a sentinel value, which triggers a generic cost model on construction (in fact, any negative value here will trigger). Note that the generic cost model is in terms of Canadian dollars [CAD/kWh].
- double `derating` = 0.8  
The derating of the solar PV array (i.e., shadowing, soiling, etc.).

### 4.25.1 Detailed Description

A structure which bundles the necessary inputs for the [Solar](#) constructor. Provides default values for every necessary input. Note that this structure encapsulates [RenewableInputs](#).

## 4.25.2 Member Data Documentation

### 4.25.2.1 capital\_cost

```
double SolarInputs::capital_cost = -1
```

The capital cost of the asset (undefined currency). -1 is a sentinel value, which triggers a generic cost model on construction (in fact, any negative value here will trigger). Note that the generic cost model is in terms of Canadian dollars [CAD].

### 4.25.2.2 derating

```
double SolarInputs::derating = 0.8
```

The derating of the solar PV array (i.e., shadowing, soiling, etc.).

### 4.25.2.3 operation\_maintenance\_cost\_kWh

```
double SolarInputs::operation_maintenance_cost_kWh = -1
```

The operation and maintenance cost of the asset [1/kWh] (undefined currency). This is a cost incurred per unit of energy produced. -1 is a sentinel value, which triggers a generic cost model on construction (in fact, any negative value here will trigger). Note that the generic cost model is in terms of Canadian dollars [CAD/kWh].

### 4.25.2.4 renewable\_inputs

```
RenewableInputs SolarInputs::renewable_inputs
```

An encapsulated [RenewableInputs](#) instance.

### 4.25.2.5 resource\_key

```
int SolarInputs::resource_key = 0
```

A key used to index into the [Resources](#) object, to associate this asset with the appropriate resource time series.

The documentation for this struct was generated from the following file:

- header/Production/Renewable/[Solar.h](#)

## 4.26 Storage Class Reference

The base class of the [Storage](#) hierarchy. This hierarchy contains derived classes which model the storage of energy.

```
#include <Storage.h>
```

Inheritance diagram for Storage:

Collaboration diagram for Storage:

### Public Member Functions

- [Storage](#) (void)  
*Constructor (dummy) for the [Storage](#) class.*
- [Storage](#) (int, double, [StorageInputs](#))  
*Constructor (intended) for the [Storage](#) class.*
- virtual void [handleReplacement](#) (int)  
*Method to handle asset replacement and capital cost incursion, if applicable.*
- void [computeEconomics](#) (std::vector< double > \*)  
*Helper method to compute key economic metrics for the [Model](#) run.*
- virtual double [getAvailablekW](#) (double)
- virtual double [getAcceptablekW](#) (double)
- virtual void [commitCharge](#) (int, double, double)

- virtual double `commitDischarge` (int, double, double, double)
- void `writeResults` (std::string, std::vector< double > \*, int, int=-1)

*Method which writes `Storage` results to an output directory.*

- virtual `~Storage` (void)

*Destructor for the `Storage` class.*

## Public Attributes

- `StorageType` type

*The type (`StorageType`) of the asset.*

- `Interpolator` interpolator

*`Interpolator` component of `Storage`.*

- bool `print_flag`

*A flag which indicates whether or not object construct/destruction should be verbose.*

- bool `is_depleted`

*A boolean which indicates whether or not the asset is currently considered depleted.*

- bool `is_sunk`

*A boolean which indicates whether or not the asset should be considered a sunk cost (i.e., capital cost incurred at the start of the model, or no).*

- int `n_points`

*The number of points in the modelling time series.*

- int `n_replacements`

*The number of times the asset has been replaced.*

- double `n_years`

*The number of years being modelled.*

- double `power_capacity_kW`

*The rated power capacity [kW] of the asset.*

- double `energy_capacity_kWh`

*The rated energy capacity [kWh] of the asset.*

- double `charge_kWh`

*The energy [kWh] stored in the asset.*

- double `power_kW`

*The power [kW] currently being charged/discharged by the asset.*

- double `nominal_inflation_annual`

*The nominal, annual inflation rate to use in computing model economics.*

- double `nominal_discount_annual`

*The nominal, annual discount rate to use in computing model economics.*

- double `real_discount_annual`

*The real, annual discount rate used in computing model economics. Is computed from the given nominal inflation and discount rates.*

- double `capital_cost`

*The capital cost of the asset (undefined currency).*

- double `operation_maintenance_cost_kWh`

*The operation and maintenance cost of the asset [1/kWh] (undefined currency). This is a cost incurred per unit of energy charged/discharged.*

- double `net_present_cost`

*The net present cost of this asset.*

- double `total_discharge_kWh`

*The total energy discharged [kWh] over the `Model` run.*

- double `levellized_cost_of_energy_kWh`

*The levellized cost of energy [1/kWh] (undefined currency) of this asset. This metric considers only discharge.*

- `std::string type_str`  
A string describing the type of the asset.
- `std::vector< double > charge_vec_kWh`  
A vector of the charge state [kWh] at each point in the modelling time series.
- `std::vector< double > charging_power_vec_kW`  
A vector of the charging power [kW] at each point in the modelling time series.
- `std::vector< double > discharging_power_vec_kW`  
A vector of the discharging power [kW] at each point in the modelling time series.
- `std::vector< double > capital_cost_vec`  
A vector of capital costs (undefined currency) incurred over each modelling time step. These costs are not discounted (i.e., these are actual costs).
- `std::vector< double > operation_maintenance_cost_vec`  
A vector of operation and maintenance costs (undefined currency) incurred over each modelling time step. These costs are not discounted (i.e., these are actual costs).

## Private Member Functions

- `void __checkInputs (int, double, StorageInputs)`  
Helper method to check inputs to the [Storage](#) constructor.
- `double __computeRealDiscountAnnual (double, double)`  
Helper method to compute the real, annual discount rate to be used in computing model economics. This enables application of the discount factor approach.
- `virtual void __writeSummary (std::string)`
- `virtual void __writeTimeSeries (std::string, std::vector< double > *, int=-1)`

### 4.26.1 Detailed Description

The base class of the [Storage](#) hierarchy. This hierarchy contains derived classes which model the storage of energy.

### 4.26.2 Constructor & Destructor Documentation

#### 4.26.2.1 [Storage\(\)](#) [1/2]

```
Storage::Storage (
    void )
```

Constructor (dummy) for the [Storage](#) class.

```
176 {
177     return;
178 } /* Storage() */
```

#### 4.26.2.2 [Storage\(\)](#) [2/2]

```
Storage::Storage (
    int n_points,
    double n_years,
    StorageInputs storage_inputs )
```

Constructor (intended) for the [Storage](#) class.

## Parameters

<i>n_points</i>	The number of points in the modelling time series.
<i>n_years</i>	The number of years being modelled.
<i>storage_inputs</i>	A structure of <a href="#">Storage</a> constructor inputs.

```

207 {
208     // 1. check inputs
209     this->__checkInputs(n_points, n_years, storage_inputs);
210
211     // 2. set attributes
212     this->print_flag = storage_inputs.print_flag;
213     this->is_depleted = false;
214     this->is_sunk = storage_inputs.is_sunk;
215
216     this->n_points = n_points;
217     this->n_replacements = 0;
218
219     this->n_years = n_years;
220
221     this->power_capacity_kW = storage_inputs.power_capacity_kW;
222     this->energy_capacity_kWh = storage_inputs.energy_capacity_kWh;
223
224     this->charge_kWh = 0;
225     this->power_kW = 0;
226
227     this->nominal_inflation_annual = storage_inputs.nominal_inflation_annual;
228     this->nominal_discount_annual = storage_inputs.nominal_discount_annual;
229
230     this->real_discount_annual = this->__computeRealDiscountAnnual(
231         storage_inputs.nominal_inflation_annual,
232         storage_inputs.nominal_discount_annual
233     );
234
235     this->capital_cost = 0;
236     this->operation_maintenance_cost_kWh = 0;
237     this->net_present_cost = 0;
238     this->total_discharge_kWh = 0;
239     this->levellized_cost_of_energy_kWh = 0;
240
241     this->charge_vec_kWh.resize(this->n_points, 0);
242     this->charging_power_vec_kW.resize(this->n_points, 0);
243     this->discharging_power_vec_kW.resize(this->n_points, 0);
244
245     this->capital_cost_vec.resize(this->n_points, 0);
246     this->operation_maintenance_cost_vec.resize(this->n_points, 0);
247
248     // 3. construction print
249     if (this->print_flag) {
250         std::cout << "Storage object constructed at " << this << std::endl;
251     }
252
253     return;
254 } /* Storage() */

```

## 4.26.2.3 ~Storage()

```

Storage::~Storage (
    void ) [virtual]

```

Destructor for the [Storage](#) class.

```

439 {
440     // 1. destruction print
441     if (this->print_flag) {
442         std::cout << "Storage object at " << this << " destroyed" << std::endl;
443     }
444
445     return;
446 } /* ~Storage() */

```

## 4.26.3 Member Function Documentation

#### 4.26.3.1 \_\_checkInputs()

```
void Storage::__checkInputs (
    int n_points,
    double n_years,
    StorageInputs storage_inputs ) [private]
```

Helper method to check inputs to the [Storage](#) constructor.

##### Parameters

<i>n_points</i>	The number of points in the modelling time series.
<i>storage_inputs</i>	A structure of <a href="#">Storage</a> constructor inputs.

```
70 {
71     // 1. check n_points
72     if (n_points <= 0) {
73         std::string error_str = "ERROR: Storage(): n_points must be > 0";
74
75         #ifdef _WIN32
76             std::cout << error_str << std::endl;
77         #endif
78
79         throw std::invalid_argument(error_str);
80     }
81
82     // 2. check n_years
83     if (n_years <= 0) {
84         std::string error_str = "ERROR: Storage(): n_years must be > 0";
85
86         #ifdef _WIN32
87             std::cout << error_str << std::endl;
88         #endif
89
90         throw std::invalid_argument(error_str);
91     }
92
93     // 3. check power_capacity_kW
94     if (storage_inputs.power_capacity_kW <= 0) {
95         std::string error_str = "ERROR: Storage(): ";
96         error_str += "StorageInputs::power_capacity_kW must be > 0";
97
98         #ifdef _WIN32
99             std::cout << error_str << std::endl;
100         #endif
101
102         throw std::invalid_argument(error_str);

```

#### 4.26.3.2 \_\_computeRealDiscountAnnual()

```
double Storage::__computeRealDiscountAnnual (
    double nominal_inflation_annual,
    double nominal_discount_annual ) [private]
```

Helper method to compute the real, annual discount rate to be used in computing model economics. This enables application of the discount factor approach.

Ref: [HOMER \[2023h\]](#)

Ref: [HOMER \[2023b\]](#)

#### Parameters

<i>nominal_inflation_annual</i>	The nominal, annual inflation rate to use in computing model economics.
<i>nominal_discount_annual</i>	The nominal, annual discount rate to use in computing model economics.

#### Returns

The real, annual discount rate to use in computing model economics.

```

152 {
153     double real_discount_annual = nominal_discount_annual - nominal_inflation_annual;
154     real_discount_annual /= 1 + nominal_inflation_annual;
155
156     return real_discount_annual;
157 } /* __computeRealDiscountAnnual() */

```

#### 4.26.3.3 \_\_writeSummary()

```

virtual void Storage::__writeSummary (
    std::string ) [inline], [private], [virtual]

```

Reimplemented in [Lilon](#).

```

104 {return;}

```

#### 4.26.3.4 \_\_writeTimeSeries()

```

virtual void Storage::__writeTimeSeries (
    std::string ,
    std::vector< double > * ,
    int = -1 ) [inline], [private], [virtual]

```

Reimplemented in [Lilon](#).

```

105 {return;}

```

#### 4.26.3.5 commitCharge()

```

virtual void Storage::commitCharge (
    int ,
    double ,
    double ) [inline], [virtual]

```

Reimplemented in [Lilon](#).

```

159 {return;}

```

#### 4.26.3.6 commitDischarge()

```
virtual double Storage::commitDischarge (
    int ,
    double ,
    double ,
    double ) [inline], [virtual]
```

Reimplemented in [Lilon](#).

```
160 {return 0;}
```

#### 4.26.3.7 computeEconomics()

```
void Storage::computeEconomics (
    std::vector< double > * time_vec_hrs_ptr )
```

Helper method to compute key economic metrics for the [Model](#) run.

Ref: [HOMER \[2023b\]](#)

Ref: [HOMER \[2023g\]](#)

Ref: [HOMER \[2023i\]](#)

Ref: [HOMER \[2023a\]](#)

##### Parameters

<i>time_vec_hrs_ptr</i>	A pointer to the <i>time_vec_hrs</i> attribute of the <a href="#">ElectricalLoad</a> .
-------------------------	--

##### 1. compute levellized cost of energy (per unit discharged)

```
307 {
308     // 1. compute net present cost
309     double t_hrs = 0;
310     double real_discount_scalar = 0;
311
312     for (int i = 0; i < this->n_points; i++) {
313         t_hrs = time_vec_hrs_ptr->at(i);
314
315         real_discount_scalar = 1.0 / pow(
316             1 + this->real_discount_annual,
317             t_hrs / 8760
318         );
319
320         this->net_present_cost += real_discount_scalar * this->capital_cost_vec[i];
321
322         this->net_present_cost +=
323             real_discount_scalar * this->operation_maintenance_cost_vec[i];
324     }
325
326     // assuming 8,760 hours per year
327     if (this->total_discharge_kWh <= 0) {
328         this->levellized_cost_of_energy_kWh = this->net_present_cost;
329     }
330
331     else {
332         double n_years = time_vec_hrs_ptr->at(this->n_points - 1) / 8760;
333
334         double capital_recovery_factor =
335             (this->real_discount_annual * pow(1 + this->real_discount_annual, n_years)) /
336             (pow(1 + this->real_discount_annual, n_years) - 1);
337
338         double total_annualized_cost = capital_recovery_factor *
339             this->net_present_cost;
340     }
```

```

341
342     this->levelled_cost_of_energy_kWh =
343         (n_years * total_annualized_cost) /
344         this->total_discharge_kWh;
345 }
346
347 return;
348 } /* computeEconomics() */

```

#### 4.26.3.8 getAcceptablekW()

```

virtual double Storage::getAcceptablekW (
    double ) [inline], [virtual]

```

Reimplemented in [Lilon](#).

```

157 {return 0;}

```

#### 4.26.3.9 getAvailablekW()

```

virtual double Storage::getAvailablekW (
    double ) [inline], [virtual]

```

Reimplemented in [Lilon](#).

```

156 {return 0;}

```

#### 4.26.3.10 handleReplacement()

```

void Storage::handleReplacement (
    int timestep ) [virtual]

```

Method to handle asset replacement and capital cost incursion, if applicable.

##### Parameters

<i>timestep</i>	The current time step of the <a href="#">Model</a> run.
-----------------	---

Reimplemented in [Lilon](#).

```

272 {
273     // 1. reset attributes
274     this->charge_kWh = 0;
275     this->power_kW = 0;
276
277     // 2. log replacement
278     this->n_replacements++;
279
280     // 3. incur capital cost in timestep
281     this->capital_cost_vec[timestep] = this->capital_cost;
282
283     return;
284 } /* __handleReplacement() */

```

#### 4.26.3.11 writeResults()

```
void Storage::writeResults (
    std::string write_path,
    std::vector< double > * time_vec_hrs_ptr,
    int storage_index,
    int max_lines = -1 )
```

Method which writes [Storage](#) results to an output directory.

##### Parameters

<i>write_path</i>	A path (either relative or absolute) to the directory location where results are to be written. If already exists, will overwrite.
<i>time_vec_hrs_ptr</i>	A pointer to the time_vec_hrs attribute of the <a href="#">ElectricalLoad</a> .
<i>storage_index</i>	An integer which corresponds to the index of the <a href="#">Storage</a> asset in the <a href="#">Model</a> .
<i>max_lines</i>	The maximum number of lines of output to write. If <0, then all available lines are written. If =0, then only summary results are written.

```
385 {
386     // 1. handle sentinel
387     if (max_lines < 0) {
388         max_lines = this->n_points;
389     }
390
391     // 2. create subdirectories
392     write_path += "Storage/";
393     if (not std::filesystem::is_directory(write_path)) {
394         std::filesystem::create_directory(write_path);
395     }
396
397     write_path += this->type_str;
398     write_path += "_";
399     write_path += std::to_string(int(ceil(this->power_capacity_kW)));
400     write_path += "kW_";
401     write_path += std::to_string(int(ceil(this->energy_capacity_kWh)));
402     write_path += "kWh_idx";
403     write_path += std::to_string(storage_index);
404     write_path += "/";
405     std::filesystem::create_directory(write_path);
406
407     // 3. write summary
408     this->__writeSummary(write_path);
409
410     // 4. write time series
411     if (max_lines > this->n_points) {
412         max_lines = this->n_points;
413     }
414
415     if (max_lines > 0) {
416         this->__writeTimeSeries(
417             write_path,
418             time_vec_hrs_ptr,
419             max_lines
420         );
421     }
422
423     return;
424 } /* writeResults() */
```

### 4.26.4 Member Data Documentation

#### 4.26.4.1 capital\_cost

```
double Storage::capital_cost
```

The capital cost of the asset (undefined currency).

#### 4.26.4.2 capital\_cost\_vec

```
std::vector<double> Storage::capital_cost_vec
```

A vector of capital costs (undefined currency) incurred over each modelling time step. These costs are not discounted (i.e., these are actual costs).

#### 4.26.4.3 charge\_kWh

```
double Storage::charge_kWh
```

The energy [kWh] stored in the asset.

#### 4.26.4.4 charge\_vec\_kWh

```
std::vector<double> Storage::charge_vec_kWh
```

A vector of the charge state [kWh] at each point in the modelling time series.

#### 4.26.4.5 charging\_power\_vec\_kW

```
std::vector<double> Storage::charging_power_vec_kW
```

A vector of the charging power [kW] at each point in the modelling time series.

#### 4.26.4.6 discharging\_power\_vec\_kW

```
std::vector<double> Storage::discharging_power_vec_kW
```

A vector of the discharging power [kW] at each point in the modelling time series.

#### 4.26.4.7 energy\_capacity\_kWh

```
double Storage::energy_capacity_kWh
```

The rated energy capacity [kWh] of the asset.

#### 4.26.4.8 interpolator

```
Interpolator Storage::interpolator
```

[Interpolator](#) component of [Storage](#).

#### 4.26.4.9 is\_depleted

```
bool Storage::is_depleted
```

A boolean which indicates whether or not the asset is currently considered depleted.

#### 4.26.4.10 is\_sunk

```
bool Storage::is_sunk
```

A boolean which indicates whether or not the asset should be considered a sunk cost (i.e., capital cost incurred at the start of the model, or no).

#### 4.26.4.11 levellized\_cost\_of\_energy\_kWh

```
double Storage::levellized_cost_of_energy_kWh
```

The levellized cost of energy [1/kWh] (undefined currency) of this asset. This metric considers only discharge.

#### 4.26.4.12 n\_points

```
int Storage::n_points
```

The number of points in the modelling time series.

**4.26.4.13 n\_replacements**

```
int Storage::n_replacements
```

The number of times the asset has been replaced.

**4.26.4.14 n\_years**

```
double Storage::n_years
```

The number of years being modelled.

**4.26.4.15 net\_present\_cost**

```
double Storage::net_present_cost
```

The net present cost of this asset.

**4.26.4.16 nominal\_discount\_annual**

```
double Storage::nominal_discount_annual
```

The nominal, annual discount rate to use in computing model economics.

**4.26.4.17 nominal\_inflation\_annual**

```
double Storage::nominal_inflation_annual
```

The nominal, annual inflation rate to use in computing model economics.

**4.26.4.18 operation\_maintenance\_cost\_kWh**

```
double Storage::operation_maintenance_cost_kWh
```

The operation and maintenance cost of the asset [1/kWh] (undefined currency). This is a cost incurred per unit of energy charged/discharged.

#### 4.26.4.19 operation\_maintenance\_cost\_vec

```
std::vector<double> Storage::operation_maintenance_cost_vec
```

A vector of operation and maintenance costs (undefined currency) incurred over each modelling time step. These costs are not discounted (i.e., these are actual costs).

#### 4.26.4.20 power\_capacity\_kW

```
double Storage::power_capacity_kW
```

The rated power capacity [kW] of the asset.

#### 4.26.4.21 power\_kW

```
double Storage::power_kW
```

The power [kW] currently being charged/discharged by the asset.

#### 4.26.4.22 print\_flag

```
bool Storage::print_flag
```

A flag which indicates whether or not object construct/destruction should be verbose.

#### 4.26.4.23 real\_discount\_annual

```
double Storage::real_discount_annual
```

The real, annual discount rate used in computing model economics. Is computed from the given nominal inflation and discount rates.

#### 4.26.4.24 total\_discharge\_kWh

```
double Storage::total_discharge_kWh
```

The total energy discharged [kWh] over the [Model](#) run.

#### 4.26.4.25 type

`StorageType` `Storage::type`

The type (`StorageType`) of the asset.

#### 4.26.4.26 type\_str

`std::string` `Storage::type_str`

A string describing the type of the asset.

The documentation for this class was generated from the following files:

- header/Storage/[Storage.h](#)
- source/Storage/[Storage.cpp](#)

## 4.27 StorageInputs Struct Reference

A structure which bundles the necessary inputs for the [Storage](#) constructor. Provides default values for every necessary input.

```
#include <Storage.h>
```

### Public Attributes

- bool [print\\_flag](#) = false  
*A flag which indicates whether or not object construct/destruction should be verbose.*
- bool [is\\_sunk](#) = false  
*A boolean which indicates whether or not the asset should be considered a sunk cost (i.e., capital cost incurred at the start of the model, or no).*
- double [power\\_capacity\\_kW](#) = 100  
*The rated power capacity [kW] of the asset.*
- double [energy\\_capacity\\_kWh](#) = 1000  
*The rated energy capacity [kWh] of the asset.*
- double [nominal\\_inflation\\_annual](#) = 0.02  
*The nominal, annual inflation rate to use in computing model economics.*
- double [nominal\\_discount\\_annual](#) = 0.04  
*The nominal, annual discount rate to use in computing model economics.*

### 4.27.1 Detailed Description

A structure which bundles the necessary inputs for the [Storage](#) constructor. Provides default values for every necessary input.

## 4.27.2 Member Data Documentation

### 4.27.2.1 energy\_capacity\_kWh

```
double StorageInputs::energy_capacity_kWh = 1000
```

The rated energy capacity [kWh] of the asset.

### 4.27.2.2 is\_sunk

```
bool StorageInputs::is_sunk = false
```

A boolean which indicates whether or not the asset should be considered a sunk cost (i.e., capital cost incurred at the start of the model, or no).

### 4.27.2.3 nominal\_discount\_annual

```
double StorageInputs::nominal_discount_annual = 0.04
```

The nominal, annual discount rate to use in computing model economics.

### 4.27.2.4 nominal\_inflation\_annual

```
double StorageInputs::nominal_inflation_annual = 0.02
```

The nominal, annual inflation rate to use in computing model economics.

### 4.27.2.5 power\_capacity\_kW

```
double StorageInputs::power_capacity_kW = 100
```

The rated power capacity [kW] of the asset.

#### 4.27.2.6 print\_flag

```
bool StorageInputs::print_flag = false
```

A flag which indicates whether or not object construct/destruction should be verbose.

The documentation for this struct was generated from the following file:

- header/Storage/[Storage.h](#)

## 4.28 Tidal Class Reference

A derived class of the [Renewable](#) branch of [Production](#) which models tidal production.

```
#include <Tidal.h>
```

Inheritance diagram for Tidal:

Collaboration diagram for Tidal:

## Public Member Functions

- [Tidal](#) (void)  
*Constructor (dummy) for the [Tidal](#) class.*
- [Tidal](#) (int, double, [TidalInputs](#), std::vector< double > \*)  
*Constructor (intended) for the [Tidal](#) class.*
- void [handleReplacement](#) (int)  
*Method to handle asset replacement and capital cost incursion, if applicable.*
- double [computeProductionkW](#) (int, double, double)  
*Method which takes in the tidal resource at a particular point in time, and then returns the tidal turbine production at that point in time.*
- double [commit](#) (int, double, double, double)  
*Method which takes in production and load for the current timestep, computes and records dispatch and curtailment, and then returns remaining load.*
- [~Tidal](#) (void)  
*Destructor for the [Tidal](#) class.*

## Public Attributes

- double [design\\_speed\\_ms](#)  
*The tidal stream speed [m/s] at which the tidal turbine achieves its rated capacity.*
- [TidalPowerProductionModel](#) [power\\_model](#)  
*The tidal power production model to be applied.*

*Helper method to check inputs to the `Tidal` constructor.*
- double `__getGenericCapitalCost` (void)  
*Helper method to generate a generic tidal turbine capital cost.*
- double `__getGenericOpMaintCost` (void)  
*Helper method to generate a generic tidal turbine operation and maintenance cost. This is a cost incurred per unit energy produced.*
- double `__computeCubicProductionkW` (int, double, double)  
*Helper method to compute tidal turbine production under a cubic production model.*
- double `__computeExponentialProductionkW` (int, double, double)  
*Helper method to compute tidal turbine production under an exponential production model.*
- double `__computeLookupProductionkW` (int, double, double)  
*Helper method to compute tidal turbine production by way of looking up using given power curve data.*
- void `__writeSummary` (std::string)  
*Helper method to write summary results for `Tidal`.*
- void `__writeTimeSeries` (std::string, std::vector< double > \*, std::map< int, std::vector< double > > \*, std::map< int, std::vector< std::vector< double > > > \*, int=-1)  
*Helper method to write time series results for `Tidal`.*

### 4.28.1 Detailed Description

A derived class of the `Renewable` branch of `Production` which models tidal production.

### 4.28.2 Constructor & Destructor Documentation

#### 4.28.2.1 `Tidal()` [1/2]

```
Tidal::Tidal (
    void )
```

Constructor (dummy) for the `Tidal` class.

```
481 {
482     return;
483 } /* Tidal() */
```

#### 4.28.2.2 `Tidal()` [2/2]

```
Tidal::Tidal (
    int n_points,
    double n_years,
    TidalInputs tidal_inputs,
    std::vector< double > * time_vec_hrs_ptr )
```

Constructor (intended) for the `Tidal` class.

## Parameters

<i>n_points</i>	The number of points in the modelling time series.
<i>n_years</i>	The number of years being modelled.
<i>tidal_inputs</i>	A structure of <a href="#">Tidal</a> constructor inputs.
<i>time_vec_hrs_ptr</i>	A pointer to the vector containing the modelling time series.

```

515 :
516 Renewable(
517     n_points,
518     n_years,
519     tidal_inputs.renewable_inputs,
520     time_vec_hrs_ptr
521 )
522 {
523     // 1. check inputs
524     this->__checkInputs(tidal_inputs);

87 } /* __checkInputs() */

```

#### 4.28.3.2 `__computeCubicProductionkW()`

```
double Tidal::__computeCubicProductionkW (
    int timestep,
    double dt_hrs,
    double tidal_resource_ms ) [private]
```

Helper method to compute tidal turbine production under a cubic production model.

Ref: [Buckham et al. \[2023\]](#)

Ref: [Bir et al. \[2011\]](#)

Ref: [Lewis et al. \[2021\]](#)

Ref: [Whitby and Ugalde-Loo \[2013\]](#)

##### Parameters

<i>timestep</i>	The current time step of the <a href="#">Model</a> run.
<i>dt_hrs</i>	The interval of time [hrs] associated with the action.
<i>tidal_resource_ms</i>	The available tidal stream resource [m/s].

##### Returns

The production [kW] of the tidal turbine, under a cubic model.

```
177 {
178     double production = 0;
179
180     if (
181         tidal_resource_ms < 0.15 * this->design_speed_ms or
182         tidal_resource_ms > 1.25 * this->design_speed_ms
183     ){
184         production = 0;
185     }
186
187     else if (
188         0.15 * this->design_speed_ms <= tidal_resource_ms and
189         tidal_resource_ms <= this->design_speed_ms
190     ) {
191         production = (1 / pow(this->design_speed_ms, 3)) * pow(tidal_resource_ms, 3);
192     }
193
194     else {
195         production = 1;
196     }
197
198     return production * this->capacity_kW;
199 } /* __computeCubicProductionkW() */
```

#### 4.28.3.3 `__computeExponentialProductionkW()`

```
double Tidal::__computeExponentialProductionkW (
    int timestep,
    double dt_hrs,
    double tidal_resource_ms ) [private]
```

Helper method to compute tidal turbine production under an exponential production model.

Ref: [Truelove et al. \[2019\]](#)

## Parameters

<i>timestep</i>	The current time step of the <a href="#">Model</a> run.
<i>dt_hrs</i>	The interval of time [hrs] associated with the action.
<i>tidal_resource_ms</i>	The available tidal stream resource [m/s].

## Returns

The production [kW] of the tidal turbine, under an exponential model.

```

233 {
234     double production = 0;
235
236     double turbine_speed =
237         (tidal_resource_ms - this->design_speed_ms) / this->design_speed_ms;
238
239     if (turbine_speed < -0.71 or turbine_speed > 0.65) {
240         production = 0;
241     }
242
243     else if (turbine_speed >= -0.71 and turbine_speed <= 0) {
244         production = 1.69215 * exp(1.25909 * turbine_speed) - 0.69215;
245     }
246
247     else {
248         production = 1;
249     }
250
251     return production * this->capacity_kW;
252 } /* __computeExponentialProductionkW() */

```

## 4.28.3.4 \_\_computeLookupProductionkW()

```

double Tidal::__computeLookupProductionkW (
    int timestep,
    double dt_hrs,
    double tidal_resource_ms ) [private]

```

Helper method to compute tidal turbine production by way of looking up using given power curve data.

## Parameters

<i>timestep</i>	The current time step of the <a href="#">Model</a> run.
<i>dt_hrs</i>	The interval of time [hrs] associated with the action.
<i>tidal_resource_ms</i>	The available tidal stream resource [m/s].

## Returns

The interpolated production [kW] of the tidal tubrine.

```

284 {
285     // *** WORK IN PROGRESS *** //
286
287     return 0;
288 } /* __computeLookupProductionkW() */

```

#### 4.28.3.5 `__getGenericCapitalCost()`

```
double Tidal::__getGenericCapitalCost (
    void ) [private]
```

Helper method to generate a generic tidal turbine capital cost.

Note that this model expresses cost in terms of Canadian dollars [CAD].

Ref: [MacDougall \[2019\]](#)

##### Returns

A generic capital cost for the tidal turbine [CAD].

```
109 {
110     double capital_cost_per_kW = 2000 * pow(this->capacity_kW, -0.15) + 4000;
111
112     return capital_cost_per_kW * this->capacity_kW;
113 } /* __getGenericCapitalCost() */
```

#### 4.28.3.6 `__getGenericOpMaintCost()`

```
double Tidal::__getGenericOpMaintCost (
    void ) [private]
```

Helper method to generate a generic tidal turbine operation and maintenance cost. This is a cost incurred per unit energy produced.

Note that this model expresses cost in terms of Canadian dollars [CAD/kWh].

Ref: [MacDougall \[2019\]](#)

##### Returns

A generic operation and maintenance cost, per unit energy produced, for the tidal turbine [CAD/kWh].

```
136 {
137     double operation_maintenance_cost_kWh = 0.05 * pow(this->capacity_kW, -0.2) + 0.05;
138
139     return operation_maintenance_cost_kWh;
140 } /* __getGenericOpMaintCost() */
```

#### 4.28.3.7 `__writeSummary()`

```
void Tidal::__writeSummary (
    std::string write_path ) [private], [virtual]
```

Helper method to write summary results for [Tidal](#).

## Parameters

<code>write_path</code>	A path (either relative or absolute) to the directory location where results are to be written. If already exists, will overwrite.
-------------------------	--

Reimplemented from [Renewable](#).

```

306 {
307     // 1. create filestream
308     write_path += "summary_results.md";
309     std::ofstream ofs;
310     ofs.open(write_path, std::ofstream::out);
311
312     // 2. write summary results (markdown)
313     ofs << "# ";

#### 4.28.3.8 \_\_writeTimeSeries()

```

void Tidal::__writeTimeSeries (
    std::string write_path,
    std::vector< double > * time_vec_hrs_ptr,
    std::map< int, std::vector< double >> * resource_map_1D_ptr,
    std::map< int, std::vector< std::vector< double >>> * resource_map_2D_ptr,
    int max_lines = -1 ) [private], [virtual]

```

Helper method to write time series results for [Tidal](#).

##### Parameters

<i>write_path</i>	A path (either relative or absolute) to the directory location where results are to be written. If already exists, will overwrite.
<i>time_vec_hrs_ptr</i>	A pointer to the <code>time_vec_hrs</code> attribute of the <a href="#">ElectricalLoad</a> .
<i>resource_map_1D_ptr</i>	A pointer to the 1D map of <a href="#">Resources</a> .
<i>resource_map_2D_ptr</i>	A pointer to the 2D map of <a href="#">Resources</a> .
<i>max_lines</i>	The maximum number of lines of output to write.

Reimplemented from [Renewable](#).

```

424 {
425     // 1. create filestream
426     write_path += "time_series_results.csv";
427     std::ofstream ofs;
428     ofs.open(write_path, std::ofstream::out);

459     }
460
461     return;
462 } /* __writeTimeSeries() */

```

### 4.28.3.9 commit()

```
double Tidal::commit (
    int timestep,
    double dt_hrs,
    double production_kW,
    double load_kW ) [virtual]
```

Method which takes in production and load for the current timestep, computes and records dispatch and curtailment, and then returns remaining load.

#### Parameters

<i>timestep</i>	The timestep (i.e., time series index) for the request.
<i>dt_hrs</i>	The interval of time [hrs] associated with the timestep.
<i>production_kW</i>	The production [kW] of the asset in this timestep.
<i>load_kW</i>	The load [kW] passed to the asset in this timestep.

#### Returns

The load [kW] remaining after the dispatch is deducted from it.

Reimplemented from [Renewable](#).

```
755 {
756     // 1. invoke base class method
757     load_kW = Renewable::commit(
758         timestep,
759         dt_hrs,
760         production_kW,
761         load_kW
762     );
763
764
765     //...
766
767     return load_kW;
768 } /* commit() */
```

### 4.28.3.10 computeProductionkW()

```
double Tidal::computeProductionkW (
    int timestep,
    double dt_hrs,
    double tidal_resource_ms ) [virtual]
```

Method which takes in the tidal resource at a particular point in time, and then returns the tidal turbine production at that point in time.

#### Parameters

<i>timestep</i>	The timestep (i.e., time series index) for the request.
<i>dt_hrs</i>	The interval of time [hrs] associated with the timestep.
<i>tidal_resource_ms</i>	<a href="#">Tidal</a> resource (i.e. tidal stream speed) [m/s].

## Returns

The production [kW] of the tidal turbine.

Reimplemented from [Renewable](#).

```

654 {
655     // given production time series override
656     if (this->normalized_production_series_given) {
657         double production_kW = Production :: getProductionkW(timestep);
658
659         return production_kW;
660     }
661
662     // check if no resource
663     if (tidal_resource_ms <= 0) {
664         return 0;
665     }
666
667     // compute production
668     double production_kW = 0;
669

715     }
716 }
717
718 return production_kW;
719 } /* computeProductionkW() */

```

#### 4.28.3.11 handleReplacement()

```

void Tidal::handleReplacement (
    int timestep ) [virtual]

```

Method to handle asset replacement and capital cost incursion, if applicable.

## Parameters

<code>timestep</code>	The current time step of the <a href="#">Model</a> run.
-----------------------	---

Reimplemented from [Renewable](#).

```
614 {  
615     // 1. reset attributes  
616     //...  
617  
618     // 2. invoke base class method  
619     Renewable :: handleReplacement(timestep);  
620  
621     return;  
622 } /* __handleReplacement() */
```

## 4.28.4 Member Data Documentation

### 4.28.4.1 design\_speed\_ms

```
double Tidal::design_speed_ms
```

The tidal stream speed [m/s] at which the tidal turbine achieves its rated capacity.

### 4.28.4.2 power\_model

```
TidalPowerProductionModel Tidal::power_model
```

The tidal power production model to be applied.

### 4.28.4.3 power\_model\_string

```
std::string Tidal::power_model_string
```

A string describing the active power production model.

The documentation for this class was generated from the following files:

- header/Production/Renewable/[Tidal.h](#)
- source/Production/Renewable/[Tidal.cpp](#)

## 4.29 TidalInputs Struct Reference

A structure which bundles the necessary inputs for the [Tidal](#) constructor. Provides default values for every necessary input. Note that this structure encapsulates [RenewableInputs](#).

```
#include <Tidal.h>
```

Collaboration diagram for TidalInputs:

### Public Attributes

- [RenewableInputs](#) `renewable_inputs`  
An encapsulated [RenewableInputs](#) instance.
- int `resource_key` = 0  
A key used to index into the [Resources](#) object, to associate this asset with the appropriate resource time series.
- double `capital_cost` = -1  
The capital cost of the asset (undefined currency). -1 is a sentinel value, which triggers a generic cost model on construction (in fact, any negative value here will trigger). Note that the generic cost model is in terms of Canadian dollars [CAD].
- double `operation_maintenance_cost_kWh` = -1  
The operation and maintenance cost of the asset [1/kWh] (undefined currency). This is a cost incurred per unit of energy produced. -1 is a sentinel value, which triggers a generic cost model on construction (in fact, any negative value here will trigger). Note that the generic cost model is in terms of Canadian dollars [CAD/kWh].
- double `design_speed_ms` = 3  
The tidal stream speed [m/s] at which the tidal turbine achieves its rated capacity.
- [TidalPowerProductionModel](#) `power_model` = [TidalPowerProductionModel](#) :: `TIDAL_POWER_CUBIC`  
The tidal power production model to be applied.

#### 4.29.1 Detailed Description

A structure which bundles the necessary inputs for the [Tidal](#) constructor. Provides default values for every necessary input. Note that this structure encapsulates [RenewableInputs](#).

## 4.29.2 Member Data Documentation

### 4.29.2.1 capital\_cost

```
double TidalInputs::capital_cost = -1
```

The capital cost of the asset (undefined currency). -1 is a sentinel value, which triggers a generic cost model on construction (in fact, any negative value here will trigger). Note that the generic cost model is in terms of Canadian dollars [CAD].

### 4.29.2.2 design\_speed\_ms

```
double TidalInputs::design_speed_ms = 3
```

The tidal stream speed [m/s] at which the tidal turbine achieves its rated capacity.

### 4.29.2.3 operation\_maintenance\_cost\_kWh

```
double TidalInputs::operation_maintenance_cost_kWh = -1
```

The operation and maintenance cost of the asset [1/kWh] (undefined currency). This is a cost incurred per unit of energy produced. -1 is a sentinel value, which triggers a generic cost model on construction (in fact, any negative value here will trigger). Note that the generic cost model is in terms of Canadian dollars [CAD/kWh].

### 4.29.2.4 power\_model

```
TidalPowerProductionModel TidalInputs::power_model = TidalPowerProductionModel :: TIDAL_POWER_CUBIC
```

The tidal power production model to be applied.

### 4.29.2.5 renewable\_inputs

```
RenewableInputs TidalInputs::renewable_inputs
```

An encapsulated [RenewableInputs](#) instance.

#### 4.29.2.6 resource\_key

```
int TidalInputs::resource_key = 0
```

A key used to index into the [Resources](#) object, to associate this asset with the appropriate resource time series.

The documentation for this struct was generated from the following file:

- [header/Production/Renewable/Tidal.h](#)

## 4.30 Wave Class Reference

A derived class of the [Renewable](#) branch of [Production](#) which models wave production.

```
#include <Wave.h>
```

Inheritance diagram for Wave:

Collaboration diagram for Wave:

## Public Member Functions

*Constructor (intended) for the [Wave](#) class.*
- void [handleReplacement](#) (int)  
*Method to handle asset replacement and capital cost incursion, if applicable.*
- double [computeProductionkW](#) (int, double, double, double)  
*Method which takes in the wave resource at a particular point in time, and then returns the wave turbine production at that point in time.*
- double [commit](#) (int, double, double, double)  
*Method which takes in production and load for the current timestep, computes and records dispatch and curtailment, and then returns remaining load.*
- [~Wave](#) (void)  
*Destructor for the [Wave](#) class.*

## Public Attributes

- double [design\\_significant\\_wave\\_height\\_m](#)  
*The significant wave height [m] at which the wave energy converter achieves its rated capacity.*
- double [design\\_energy\\_period\\_s](#)  
*The energy period [s] at which the wave energy converter achieves its rated capacity.*
- [WavePowerProductionModel](#) [power\\_model](#)  
*The wave power production model to be applied.*
- std::string [power\\_model\\_string](#)  
*A string describing the active power production model.*

## Private Member Functions

- void `__checkInputs` ([WaveInputs](#))  
Helper method to check inputs to the [Wave](#) constructor.
- double `__getGenericCapitalCost` (void)  
Helper method to generate a generic wave energy converter capital cost.
- double `__getGenericOpMaintCost` (void)  
Helper method to generate a generic wave energy converter operation and maintenance cost. This is a cost incurred per unit energy produced.
- double `__computeGaussianProductionkW` (int, double, double, double)  
Helper method to compute wave energy converter production under a Gaussian production model.
- double `__computeParaboloidProductionkW` (int, double, double, double)  
Helper method to compute wave energy converter production under a paraboloid production model.
- double `__computeLookupProductionkW` (int, double, double, double)  
Helper method to compute wave energy converter production by way of looking up using given performance matrix.
- void `__writeSummary` (std::string)  
Helper method to write summary results for [Wave](#).
- void `__writeTimeSeries` (std::string, std::vector< double > \*, std::map< int, std::vector< double >> \*, std::map< int, std::vector< std::vector< double >>> \*, int=-1)  
Helper method to write time series results for [Wave](#).

### 4.30.1 Detailed Description

A derived class of the [Renewable](#) branch of [Production](#) which models wave production.

### 4.30.2 Constructor & Destructor Documentation

#### 4.30.2.1 `Wave()` [1/2]

```
Wave::Wave (
    void )
```

Constructor (dummy) for the [Wave](#) class.

```
543 {
544     return;
545 } /* Wave() */
```

#### 4.30.2.2 `Wave()` [2/2]

```
Wave::Wave (
    int n_points,
    double n_years,
    WaveInputs wave_inputs,
    std::vector< double > * time_vec_hrs_ptr )
```

Constructor (intended) for the [Wave](#) class.

## Parameters

<i>n_points</i>	The number of points in the modelling time series.
<i>n_years</i>	The number of years being modelled.
<i>wave_inputs</i>	A structure of <a href="#">Wave</a> constructor inputs.
<i>time_vec_hrs_ptr</i>	A pointer to the vector containing the modelling time series.

```

577 :
578 Renewable(
579     n_points,
580     n_years,
581     wave_inputs.renewable_inputs,
582     time_vec_hrs_ptr
583 )
584 {
585     // 1. check inputs
586     this->__checkInputs(wave_inputs);
587
588     // 2. set attributes
589     this->type = RenewableType :: WAVE;
590     this->type_str = "WAVE";
591
592     this->resource_key = wave_inputs.resource_key;
593
594     this->design_significant_wave_height_m =
595         wave_inputs.design_significant_wave_height_m;
596     this->design_energy_period_s = wave_inputs.design_energy_period_s;
597
598     this->power_model = wave_inputs.power_model;
599
600     switch (this->power_model) {
601         case (WavePowerProductionModel :: WAVE_POWER_GAUSSIAN): {

662     }
663
664     return;
665 } /* Renewable() */

```

#### 4.30.2.3 ~Wave()

```

Wave::~~Wave (
    void )

```

Destructor for the [Wave](#) class.

```

858 {
859     // 1. destruction print
860     if (this->print_flag) {
861         std::cout << "Wave object at " << this << " destroyed" << std::endl;
862     }
863
864     return;
865 } /* ~Wave() */

```

### 4.30.3 Member Function Documentation

#### 4.30.3.1 \_\_checkInputs()

```

void Wave::__checkInputs (
    WaveInputs wave_inputs ) [private]

```

Helper method to check inputs to the [Wave](#) constructor.

##### Parameters

<i>wave_inputs</i>	A structure of <a href="#">Wave</a> constructor inputs.
--------------------	---

```

64 {
65     // 1. check design_significant_wave_height_m
66     if (wave_inputs.design_significant_wave_height_m <= 0) {
67         std::string error_str = "ERROR: Wave(): ";
68         error_str += "WaveInputs::design_significant_wave_height_m must be > 0";
69
70         #ifdef _WIN32

72         #endif
73
74         throw std::invalid_argument(error_str);
75     }
76
77     // 2. check design_energy_period_s
78     if (wave_inputs.design_energy_period_s <= 0) {
79         std::string error_str = "ERROR: Wave(): ";
80         error_str += "WaveInputs::design_energy_period_s must be > 0";
81
82         #ifdef _WIN32

```

```

83         std::cout << error_str << std::endl;
84     #endif
85
86     throw std::invalid_argument(error_str);
87 }
88
89 // 3. if WAVE_POWER_LOOKUP, check that path is given
90 if (
91     wave_inputs.power_model == WavePowerProductionModel::WAVE_POWER_LOOKUP and
92     wave_inputs.path_2_normalized_performance_matrix.empty()
93 ) {
94     std::string error_str = "ERROR: Wave() power model was set to ";
95     error_str += "WavePowerProductionModel::WAVE_POWER_LOOKUP, but no path to a ";
96     error_str += "normalized performance matrix was given";
97
98     #ifdef _WIN32
99         std::cout << error_str << std::endl;
100     #endif
101
102     throw std::invalid_argument(error_str);
103 }
104
105 return;
106 } /* __checkInputs() */

```

#### 4.30.3.2 \_\_computeGaussianProductionkW()

```

double Wave::__computeGaussianProductionkW (
    int timestep,
    double dt_hrs,
    double significant_wave_height_m,
    double energy_period_s ) [private]

```

Helper method to compute wave energy converter production under a Gaussian production model.

Ref: [Truelove et al. \[2019\]](#)

##### Parameters

<i>timestep</i>	The current time step of the <a href="#">Model</a> run.
<i>dt_hrs</i>	The interval of time [hrs] associated with the action.
<i>significant_wave_height_m</i>	The significant wave height [m] in the vicinity of the wave energy converter.
<i>energy_period_s</i>	The energy period [s] in the vicinity of the wave energy converter

##### Returns

The production [kW] of the wave energy converter, under an exponential model.

```

201 {
202     double H_s_nondim =
203         (significant_wave_height_m - this->design_significant_wave_height_m) /
204         this->design_significant_wave_height_m;
205
206     double T_e_nondim =
207         (energy_period_s - this->design_energy_period_s) /
208         this->design_energy_period_s;
209
210     double production = exp(
211         -2.25119 * pow(T_e_nondim, 2) +
212         3.44570 * T_e_nondim * H_s_nondim -
213         4.01508 * pow(H_s_nondim, 2)
214     );
215
216     return production * this->capacity_kW;

```

```
217 } /* __computeGaussianProductionkW() */
```

#### 4.30.3.3 \_\_computeLookupProductionkW()

```
double Wave::__computeLookupProductionkW (
    int timestep,
    double dt_hrs,
    double significant_wave_height_m,
    double energy_period_s ) [private]
```

Helper method to compute wave energy converter production by way of looking up using given performance matrix.

##### Parameters

<i>timestep</i>	The current time step of the <a href="#">Model</a> run.
<i>dt_hrs</i>	The interval of time [hrs] associated with the action.
<i>significant_wave_height_m</i>	The significant wave height [m] in the vicinity of the wave energy converter.
<i>energy_period_s</i>	The energy period [s] in the vicinity of the wave energy converter

##### Returns

The interpolated production [kW] of the wave energy converter.

```
318 {
319     double prod = this->interpolator.interp2D(
320         0,
321         significant_wave_height_m,
322         energy_period_s
323     );
324
325     return prod * this->capacity_kW;
326 } /* __computeLookupProductionkW() */
```

#### 4.30.3.4 \_\_computeParaboloidProductionkW()

```
double Wave::__computeParaboloidProductionkW (
    int timestep,
    double dt_hrs,
    double significant_wave_height_m,
    double energy_period_s ) [private]
```

Helper method to compute wave energy converter production under a paraboloid production model.

Ref: [Robertson et al. \[2021\]](#)

##### Parameters

<i>timestep</i>	The current time step of the <a href="#">Model</a> run.
<i>dt_hrs</i>	The interval of time [hrs] associated with the action.
<i>significant_wave_height_m</i>	The significant wave height [m] in the vicinity of the wave energy converter.
<i>energy_period_s</i>	The energy period [s] in the vicinity of the wave energy converter

**Returns**

The production [kW] of the wave energy converter, under a paraboloid model.

```

258 {
259     // first, check for idealized wave breaking (deep water)
260     if (significant_wave_height_m >= 0.2184 * pow(energy_period_s, 2)) {
261         return 0;
262     }
263
264     // otherwise, apply generic quadratic performance model
265     // (with outputs bounded to [0, 1])
266     double production =
267         0.289 * significant_wave_height_m -
268         0.00111 * pow(significant_wave_height_m, 2) * energy_period_s -
269         0.0169 * energy_period_s;
270
271     if (production < 0) {
272         production = 0;
273     }
274
275     else if (production > 1) {
276         production = 1;
277     }
278
279     return production * this->capacity_kW;
280 } /* __computeParaboloidProductionkW() */

```

**4.30.3.5 \_\_getGenericCapitalCost()**

```

double Wave::__getGenericCapitalCost (
    void ) [private]

```

Helper method to generate a generic wave energy converter capital cost.

Note that this model expresses cost in terms of Canadian dollars [CAD].

Ref: [MacDougall \[2019\]](#)

**Returns**

A generic capital cost for the wave energy converter [CAD].

```

128 {
129     double capital_cost_per_kW = 7000 * pow(this->capacity_kW, -0.15) + 5000;
130
131     return capital_cost_per_kW * this->capacity_kW;
132 } /* __getGenericCapitalCost() */

```

**4.30.3.6 \_\_getGenericOpMaintCost()**

```

double Wave::__getGenericOpMaintCost (
    void ) [private]

```

Helper method to generate a generic wave energy converter operation and maintenance cost. This is a cost incurred per unit energy produced.

Note that this model expresses cost in terms of Canadian dollars [CAD/kWh].

Ref: [MacDougall \[2019\]](#)

**Returns**

A generic operation and maintenance cost, per unit energy produced, for the wave energy converter [CAD/kWh].

```

156 {
157     double operation_maintenance_cost_kWh = 0.05 * pow(this->capacity_kW, -0.2) + 0.05;
158
159     return operation_maintenance_cost_kWh;
160 } /* __getGenericOpMaintCost() */

```

### 4.30.3.7 \_\_writeSummary()

```
void Wave::__writeSummary (
    std::string write_path ) [private], [virtual]
```

Helper method to write summary results for [Wave](#).

#### Parameters

<i>write_path</i>	A path (either relative or absolute) to the directory location where results are to be written. If already exists, will overwrite.
-------------------	--

Reimplemented from [Renewable](#).

```
344 {
345     // 1. create filestream
346     write_path += "summary_results.md";
347     std::ofstream ofs;
348     ofs.open(write_path, std::ofstream::out);
349
350     // 2. write summary results (markdown)

#### 4.30.3.8 \_\_writeTimeSeries()

```

void Wave::__writeTimeSeries (
    std::string write_path,
    std::vector< double > * time_vec_hrs_ptr,
    std::map< int, std::vector< double >> * resource_map_1D_ptr,
    std::map< int, std::vector< std::vector< double >>> * resource_map_2D_ptr,
    int max_lines = -1 ) [private], [virtual]

```

Helper method to write time series results for [Wave](#).

##### Parameters

<i>write_path</i>	A path (either relative or absolute) to the directory location where results are to be written. If already exists, will overwrite.
<i>time_vec_hrs_ptr</i>	A pointer to the <code>time_vec_hrs</code> attribute of the <a href="#">ElectricalLoad</a> .
<i>resource_map_1D_ptr</i>	A pointer to the 1D map of <a href="#">Resources</a> .
<i>resource_map_2D_ptr</i>	A pointer to the 2D map of <a href="#">Resources</a> .
<i>max_lines</i>	The maximum number of lines of output to write.

Reimplemented from [Renewable](#).

```

484 {

#### 4.30.3.9 commit()

```

double Wave::commit (
    int timestep,
    double dt_hrs,
    double production_kW,
    double load_kW ) [virtual]

```

Method which takes in production and load for the current timestep, computes and records dispatch and curtailment, and then returns remaining load.

##### Parameters

<i>timestep</i>	The timestep (i.e., time series index) for the request.
<i>dt_hrs</i>	The interval of time [hrs] associated with the timestep.
<i>production_kW</i>	The production [kW] of the asset in this timestep.
<i>load_kW</i>	The load [kW] passed to the asset in this timestep.

##### Returns

The load [kW] remaining after the dispatch is deducted from it.

Reimplemented from [Renewable](#).

```

830 {
831     // 1. invoke base class method
832     load_kW = Renewable::commit(
833         timestep,
834         dt_hrs,
835         production_kW,

```

```

836         load_kW
837     );
838
839
840     //...
841
842     return load_kW;
843 } /* commit() */

```

#### 4.30.3.10 computeProductionkW()

```

double Wave::computeProductionkW (
    int timestep,
    double dt_hrs,
    double significant_wave_height_m,
    double energy_period_s ) [virtual]

```

Method which takes in the wave resource at a particular point in time, and then returns the wave turbine production at that point in time.

##### Parameters

<i>timestep</i>	The timestep (i.e., time series index) for the request.
<i>dt_hrs</i>	The interval of time [hrs] associated with the timestep.
<i>signficiant_wave_height_m</i>	The significant wave height (wave statistic) [m].
<i>energy_period_s</i>	The energy period (wave statistic) [s].

##### Returns

The production [kW] of the wave turbine.

Reimplemented from [Renewable](#).

```

727 {

```

#### 4.30.3.11 handleReplacement()

```

void Wave::handleReplacement (
    int timestep ) [virtual]

```

Method to handle asset replacement and capital cost incursion, if applicable.

##### Parameters

<i>timestep</i>	The current time step of the <a href="#">Model</a> run.
-----------------	---

Reimplemented from [Renewable](#).

```

683 {
684     // 1. reset attributes
685     //...
686
687     // 2. invoke base class method
688     Renewable :: handleReplacement(timestep);
689
690     return;
691 } /* __handleReplacement() */

```

### 4.30.4 Member Data Documentation

#### 4.30.4.1 design\_energy\_period\_s

```
double Wave::design_energy_period_s
```

The energy period [s] at which the wave energy converter achieves its rated capacity.

#### 4.30.4.2 design\_significant\_wave\_height\_m

```
double Wave::design_significant_wave_height_m
```

The significant wave height [m] at which the wave energy converter achieves its rated capacity.

#### 4.30.4.3 power\_model

```
WavePowerProductionModel Wave::power_model
```

The wave power production model to be applied.

#### 4.30.4.4 power\_model\_string

```
std::string Wave::power_model_string
```

A string describing the active power production model.

The documentation for this class was generated from the following files:

- header/Production/Renewable/[Wave.h](#)
- source/Production/Renewable/[Wave.cpp](#)

## 4.31 WaveInputs Struct Reference

A structure which bundles the necessary inputs for the [Wave](#) constructor. Provides default values for every necessary input. Note that this structure encapsulates [RenewableInputs](#).

```
#include <Wave.h>
```

Collaboration diagram for WaveInputs:

### Public Attributes

- [RenewableInputs](#) `renewable_inputs`  
An encapsulated [RenewableInputs](#) instance.
- `int` `resource_key` = 0  
A key used to index into the [Resources](#) object, to associate this asset with the appropriate resource time series.
- `double` `capital_cost` = -1  
The capital cost of the asset (undefined currency). -1 is a sentinel value, which triggers a generic cost model on construction (in fact, any negative value here will trigger). Note that the generic cost model is in terms of Canadian dollars [CAD].
- `double` `operation_maintenance_cost_kWh` = -1  
The operation and maintenance cost of the asset [1/kWh] (undefined currency). This is a cost incurred per unit of energy produced. -1 is a sentinel value, which triggers a generic cost model on construction (in fact, any negative value here will trigger). Note that the generic cost model is in terms of Canadian dollars [CAD/kWh].
- `double` `design_significant_wave_height_m` = 3  
The significant wave height [m] at which the wave energy converter achieves its rated capacity.
- `double` `design_energy_period_s` = 10  
The energy period [s] at which the wave energy converter achieves its rated capacity.
- [WavePowerProductionModel](#) `power_model` = [WavePowerProductionModel](#) :: [WAVE\\_POWER\\_PARABOLOID](#)  
The wave power production model to be applied.
- `std::string` `path_2_normalized_performance_matrix` = ""  
A path (either relative or absolute) to a normalized performance matrix for the wave energy converter.

### 4.31.1 Detailed Description

A structure which bundles the necessary inputs for the [Wave](#) constructor. Provides default values for every necessary input. Note that this structure encapsulates [RenewableInputs](#).

### 4.31.2 Member Data Documentation

#### 4.31.2.1 capital\_cost

```
double WaveInputs::capital_cost = -1
```

The capital cost of the asset (undefined currency). -1 is a sentinel value, which triggers a generic cost model on construction (in fact, any negative value here will trigger). Note that the generic cost model is in terms of Canadian dollars [CAD].

#### 4.31.2.2 design\_energy\_period\_s

```
double WaveInputs::design_energy_period_s = 10
```

The energy period [s] at which the wave energy converter achieves its rated capacity.

#### 4.31.2.3 design\_significant\_wave\_height\_m

```
double WaveInputs::design_significant_wave_height_m = 3
```

The significant wave height [m] at which the wave energy converter achieves its rated capacity.

#### 4.31.2.4 operation\_maintenance\_cost\_kWh

```
double WaveInputs::operation_maintenance_cost_kWh = -1
```

The operation and maintenance cost of the asset [1/kWh] (undefined currency). This is a cost incurred per unit of energy produced. -1 is a sentinel value, which triggers a generic cost model on construction (in fact, any negative value here will trigger). Note that the generic cost model is in terms of Canadian dollars [CAD/kWh].

#### 4.31.2.5 path\_2\_normalized\_performance\_matrix

```
std::string WaveInputs::path_2_normalized_performance_matrix = ""
```

A path (either relative or absolute) to a normalized performance matrix for the wave energy converter.

#### 4.31.2.6 power\_model

```
WavePowerProductionModel WaveInputs::power_model = WavePowerProductionModel :: WAVE_POWER_PARABOLOID
```

The wave power production model to be applied.

#### 4.31.2.7 renewable\_inputs

```
RenewableInputs WaveInputs::renewable_inputs
```

An encapsulated [RenewableInputs](#) instance.

#### 4.31.2.8 resource\_key

```
int WaveInputs::resource_key = 0
```

A key used to index into the [Resources](#) object, to associate this asset with the appropriate resource time series.

### 4.32.1 Detailed Description

A derived class of the [Renewable](#) branch of [Production](#) which models wind production.

## 4.32.2 Constructor & Destructor Documentation

### 4.32.2.1 Wind() [1/2]

```
Wind::Wind (
    void )
```

Constructor (dummy) for the [Wind](#) class.

```
501 {
502     return;
503 } /* Wind() */
```

### 4.32.2.2 Wind() [2/2]

```
Wind::Wind (
    int n_points,
    double n_years,
    WindInputs wind_inputs,
    std::vector< double > * time_vec_hrs_ptr )
```

Constructor (intended) for the [Wind](#) class.

#### Parameters

<i>n_points</i>	The number of points in the modelling time series.
<i>n_years</i>	The number of years being modelled.
<i>wind_inputs</i>	A structure of <a href="#">Wind</a> constructor inputs.
<i>time_vec_hrs_ptr</i>	A pointer to the vector containing the modelling time series.

```
535 :
536 Renewable(
537     n_points,
538     n_years,
539     wind_inputs.renewable_inputs,
540     time_vec_hrs_ptr
541 )
542 {

614
615 return;
616 } /* Renewable() */

```

#### 4.32.2.3 ~Wind()

```

Wind::~~Wind (
    void )

```

Destructor for the [Wind](#) class.

```

802 {
803     // 1. destruction print
804     if (this->print_flag) {
805         std::cout << "Wind object at " << this << " destroyed" << std::endl;
806     }
807
808     return;
809 } /* ~Wind() */

```

### 4.32.3 Member Function Documentation

4.32.3.1 `__checkInputs()`

```
void Wind::__checkInputs (
    WindInputs wind_inputs ) [private]
```

Helper method to check inputs to the [Wind](#) constructor.

Ref: [Zafar \[2018\]](#)

## Parameters

<i>wind_inputs</i>	A structure of <a href="#">Wind</a> constructor inputs.
--------------------	---

```
66 {
67     // 1. check design_speed_ms
68     if (wind_inputs.design_speed_ms <= 0) {
69         std::string error_str = "ERROR: Wind(): ";
70         error_str += "WindInputs::design_speed_ms must be > 0";
71
72         #ifdef WIN32
73             std::cout << error_str << std::endl;
74         #endif
75
76         throw std::invalid_argument(error_str);
77     }
78
79     else if (wind_inputs.design_speed_ms < 12) {
80         std::string warning_str = "WARNING: Wind(): ";
81         warning_str += "Setting WindInputs::design_speed_ms to less than 12 m/s may be ";
82         warning_str += "technically unrealistic";
83
84         std::cout << warning_str << std::endl;
85     }
86
87     return;
88 } /* __checkInputs() */
```

4.32.3.2 `__computeCubicProductionkW()`

```
double Wind::__computeCubicProductionkW (
    int timestep,
    double dt_hrs,
    double wind_resource_ms ) [private]
```

Helper method to compute wind turbine production under a cubic production model.

Ref: [Milan et al. \[2010\]](#)

Ref: [Zafar \[2018\]](#)

## Parameters

<i>timestep</i>	The current time step of the <a href="#">Model</a> run.
<i>dt_hrs</i>	The interval of time [hrs] associated with the action.
<i>wind_resource_ms</i>	The available wind resource [m/s].

**Returns**

The production [kW] of the wind turbine, under an exponential model.

```

176 {
177     double production = 0;
178
179     double turbine_speed = (wind_resource_ms - this->design_speed_ms) /
180         this->design_speed_ms;
181
182     if (turbine_speed < -0.7857 or turbine_speed > 0.7857) {
183         production = 0;
184     }
185
186     else if (turbine_speed >= -0.7857 and turbine_speed <= 0) {
187         production = (1 / pow(this->design_speed_ms, 3)) * pow(wind_resource_ms, 3);
188     }
189
190     else {
191         production = 1;
192     }
193
194     return production * this->capacity_kW;
195 } /* __computeCubicProductionkW() */

```

**4.32.3.3 \_\_computeExponentialProductionkW()**

```

double Wind::__computeExponentialProductionkW (
    int timestep,
    double dt_hrs,
    double wind_resource_ms ) [private]

```

Helper method to compute wind turbine production under an exponential production model.

Ref: [Truelove et al. \[2019\]](#)

**Parameters**

<i>timestep</i>	The current time step of the <a href="#">Model</a> run.
<i>dt_hrs</i>	The interval of time [hrs] associated with the action.
<i>wind_resource_ms</i>	The available wind resource [m/s].

**Returns**

The production [kW] of the wind turbine, under an exponential model.

```

229 {
230     double production = 0;
231
232     double turbine_speed = (wind_resource_ms - this->design_speed_ms) /
233         this->design_speed_ms;
234
235     if (turbine_speed < -0.76 or turbine_speed > 0.68) {
236         production = 0;
237     }
238
239     else if (turbine_speed >= -0.76 and turbine_speed <= 0) {
240         production = 1.03273 * exp(-5.97588 * pow(turbine_speed, 2)) - 0.03273;
241     }
242
243     else {
244         production = 0.16154 * exp(-9.30254 * pow(turbine_speed, 2)) + 0.83846;
245     }
246
247     return production * this->capacity_kW;
248 } /* __computeExponentialProductionkW() */

```

4.32.3.4 `__computeLookupProductionkW()`

```
double Wind::__computeLookupProductionkW (
    int timestep,
    double dt_hrs,
    double wind_resource_ms ) [private]
```

Helper method to compute wind turbine production by way of looking up using given power curve data.

## Parameters

<i>timestep</i>	The current time step of the <a href="#">Model</a> run.
<i>dt_hrs</i>	The interval of time [hrs] associated with the action.
<i>wind_resource_ms</i>	The available wind resource [m/s].

## Returns

The interpolated production [kW] of the wind turbine.

```
280 {
281     // *** WORK IN PROGRESS *** //
282
283     return 0;
284 } /* __computeLookupProductionkW() */
```

4.32.3.5 `__getGenericCapitalCost()`

```
double Wind::__getGenericCapitalCost (
    void ) [private]
```

Helper method to generate a generic wind turbine capital cost.

This model was obtained by way of surveying an assortment of published wind turbine costs, and then constructing a best fit model. Note that this model expresses cost in terms of Canadian dollars [CAD].

## Returns

A generic capital cost for the wind turbine [CAD].

```
110 {
111     double capital_cost_per_kW = 3000 * pow(this->capacity_kW, -0.15) + 3000;
112
113     return capital_cost_per_kW * this->capacity_kW;
114 } /* __getGenericCapitalCost() */
```

#### 4.32.3.6 `__getGenericOpMaintCost()`

```
double Wind::__getGenericOpMaintCost (
    void ) [private]
```

Helper method to generate a generic wind turbine operation and maintenance cost. This is a cost incurred per unit energy produced.

This model was obtained by way of surveying an assortment of published wind turbine costs, and then constructing a best fit model. Note that this model expresses cost in terms of Canadian dollars [CAD/kWh].

##### Returns

A generic operation and maintenance cost, per unit energy produced, for the wind turbine [CAD/kWh].

```
137 {
138     double operation_maintenance_cost_kWh = 0.025 * pow(this->capacity_kW, -0.2) + 0.025;
139
140     return operation_maintenance_cost_kWh;
141 } /* __getGenericOpMaintCost() */
```

#### 4.32.3.7 `__writeSummary()`

```
void Wind::__writeSummary (
    std::string write_path ) [private], [virtual]
```

Helper method to write summary results for [Wind](#).

##### Parameters

<i>write_path</i>	A path (either relative or absolute) to the directory location where results are to be written. If already exists, will overwrite.
-------------------	--

Reimplemented from [Renewable](#).

```
302 {
303     // 1. create filestream
304     write_path += "summary_results.md";
305     std::ofstream ofs;
306     ofs.open(write_path, std::ofstream::out);

#### 4.32.3.8 \_\_writeTimeSeries()

```

void Wind::__writeTimeSeries (
    std::string write_path,

```

```

std::vector< double > * time_vec_hrs_ptr,
std::map< int, std::vector< double >> * resource_map_1D_ptr,
std::map< int, std::vector< std::vector< double >>> * resource_map_2D_ptr,
int max_lines = -1 ) [private], [virtual]

```

Helper method to write time series results for [Wind](#).

#### Parameters

<i>write_path</i>	A path (either relative or absolute) to the directory location where results are to be written. If already exists, will overwrite.
<i>time_vec_hrs_ptr</i>	A pointer to the <code>time_vec_hrs</code> attribute of the <a href="#">ElectricalLoad</a> .
<i>resource_map_1D_ptr</i>	A pointer to the 1D map of <a href="#">Resources</a> .
<i>resource_map_2D_ptr</i>	A pointer to the 2D map of <a href="#">Resources</a> .
<i>max_lines</i>	The maximum number of lines of output to write.

Reimplemented from [Renewable](#).

```

445 {
446     // 1. create filestream
447     write_path += "time_series_results.csv";
448     std::ofstream ofs;

482     return;
483 } /* __writeTimeSeries() */

```

#### 4.32.3.9 commit()

```

double Wind::commit (
    int timestep,
    double dt_hrs,
    double production_kW,
    double load_kW ) [virtual]

```

Method which takes in production and load for the current timestep, computes and records dispatch and curtailment, and then returns remaining load.

## Parameters

<i>timestep</i>	The timestep (i.e., time series index) for the request.
<i>dt_hrs</i>	The interval of time [hrs] associated with the timestep.
<i>production_kW</i>	The production [kW] of the asset in this timestep.
<i>load_kW</i>	The load [kW] passed to the asset in this timestep.

## Returns

The load [kW] remaining after the dispatch is deducted from it.

Reimplemented from [Renewable](#).

```

774 {
775     // 1. invoke base class method
776     load_kW = Renewable :: commit(
777         timestep,
778         dt_hrs,
779         production_kW,
780         load_kW
781     );
782
783
784     //...
785
786     return load_kW;
787 } /* commit() */

```

## 4.32.3.10 computeProductionkW()

```

double Wind::computeProductionkW (
    int timestep,
    double dt_hrs,
    double wind_resource_ms ) [virtual]

```

Method which takes in the wind resource at a particular point in time, and then returns the wind turbine production at that point in time.

## Parameters

<i>timestep</i>	The timestep (i.e., time series index) for the request.
<i>dt_hrs</i>	The interval of time [hrs] associated with the timestep.
<i>wind_resource_ms</i>	<a href="#">Wind</a> resource (i.e. wind speed) [m/s].

## Returns

The production [kW] of the wind turbine.

Reimplemented from [Renewable](#).

```

674 {
675     // given production time series override
676     if (this->normalized_production_series_given) {
677         double production_kW = Production :: getProductionkW(timestep);
678
679         return production_kW;
680     }
681

```

```

682     // check if no resource

731     }
732
733     return production_kW;
734 }
735
736 /* computeProductionkW() */

```

#### 4.32.3.11 handleReplacement()

```

void Wind::handleReplacement (
    int timestep ) [virtual]

```

Method to handle asset replacement and capital cost incursion, if applicable.

##### Parameters

<i>timestep</i>	The current time step of the <a href="#">Model</a> run.
-----------------	---

Reimplemented from [Renewable](#).

```

634 {
635     // 1. reset attributes
636     //...

```

```
637
638     // 2. invoke base class method
639     Renewable::handleReplacement(timestep);
640
641     return;
642 } /* __handleReplacement() */
```

## 4.32.4 Member Data Documentation

### 4.32.4.1 design\_speed\_ms

```
double Wind::design_speed_ms
```

The wind speed [m/s] at which the wind turbine achieves its rated capacity.

### 4.32.4.2 power\_model

```
WindPowerProductionModel Wind::power_model
```

The wind power production model to be applied.

### 4.32.4.3 power\_model\_string

```
std::string Wind::power_model_string
```

A string describing the active power production model.

The documentation for this class was generated from the following files:

- [header/Production/Renewable/Wind.h](#)
- [source/Production/Renewable/Wind.cpp](#)

## 4.33 WindInputs Struct Reference

A structure which bundles the necessary inputs for the [Wind](#) constructor. Provides default values for every necessary input. Note that this structure encapsulates [RenewableInputs](#).

```
#include <Wind.h>
```

Collaboration diagram for WindInputs:

### Public Attributes

- [RenewableInputs](#) `renewable_inputs`  
An encapsulated [RenewableInputs](#) instance.
- int `resource_key` = 0  
A key used to index into the [Resources](#) object, to associate this asset with the appropriate resource time series.
- double `capital_cost` = -1  
The capital cost of the asset (undefined currency). -1 is a sentinel value, which triggers a generic cost model on construction (in fact, any negative value here will trigger). Note that the generic cost model is in terms of Canadian dollars [CAD].
- double `operation_maintenance_cost_kWh` = -1  
The operation and maintenance cost of the asset [1/kWh] (undefined currency). This is a cost incurred per unit of energy produced. -1 is a sentinel value, which triggers a generic cost model on construction (in fact, any negative value here will trigger). Note that the generic cost model is in terms of Canadian dollars [CAD/kWh].
- double `design_speed_ms` = 14  
The wind speed [m/s] at which the wind turbine achieves its rated capacity.
- [WindPowerProductionModel](#) `power_model` = [WindPowerProductionModel](#) :: `WIND_POWER_CUBIC`  
The wind power production model to be applied.

#### 4.33.1 Detailed Description

A structure which bundles the necessary inputs for the [Wind](#) constructor. Provides default values for every necessary input. Note that this structure encapsulates [RenewableInputs](#).

## 4.33.2 Member Data Documentation

### 4.33.2.1 capital\_cost

```
double WindInputs::capital_cost = -1
```

The capital cost of the asset (undefined currency). -1 is a sentinel value, which triggers a generic cost model on construction (in fact, any negative value here will trigger). Note that the generic cost model is in terms of Canadian dollars [CAD].

### 4.33.2.2 design\_speed\_ms

```
double WindInputs::design_speed_ms = 14
```

The wind speed [m/s] at which the wind turbine achieves its rated capacity.

### 4.33.2.3 operation\_maintenance\_cost\_kWh

```
double WindInputs::operation_maintenance_cost_kWh = -1
```

The operation and maintenance cost of the asset [1/kWh] (undefined currency). This is a cost incurred per unit of energy produced. -1 is a sentinel value, which triggers a generic cost model on construction (in fact, any negative value here will trigger). Note that the generic cost model is in terms of Canadian dollars [CAD/kWh].

### 4.33.2.4 power\_model

```
WindPowerProductionModel WindInputs::power_model = WindPowerProductionModel :: WIND_POWER_CUBIC
```

The wind power production model to be applied.

### 4.33.2.5 renewable\_inputs

```
RenewableInputs WindInputs::renewable_inputs
```

An encapsulated [RenewableInputs](#) instance.

### 4.33.2.6 resource\_key

```
int WindInputs::resource_key = 0
```

A key used to index into the [Resources](#) object, to associate this asset with the appropriate resource time series.

The documentation for this struct was generated from the following file:

- [header/Production/Renewable/Wind.h](#)

## Classes

- class [Controller](#)

*A class which contains a various dispatch control logic. Intended to serve as a component class of [Model](#).*

## Enumerations

- enum [ControlMode](#) { [LOAD\\_FOLLOWING](#) , [CYCLE\\_CHARGING](#) , [N\\_CONTROL\\_MODES](#) }

*An enumeration of the types of control modes supported by PGMcpp.*

### 5.1.1 Detailed Description

Header file for the [Controller](#) class.

### 5.1.2 Enumeration Type Documentation

#### 5.1.2.1 ControlMode

enum [ControlMode](#)

An enumeration of the types of control modes supported by PGMcpp.

##### Enumerator

<a href="#">LOAD_FOLLOWING</a>	Load following control, with in-order dispatch of non-Combustion assets and optimal dispatch of <a href="#">Combustion</a> assets.
<a href="#">CYCLE_CHARGING</a>	Cycle charging control, with in-order dispatch of non-Combustion assets and optimal dispatch of <a href="#">Combustion</a> assets.
<a href="#">N_CONTROL_MODES</a>	A simple hack to get the number of elements in ControlMode.

```

69         {
70     LOAD\_FOLLOWING,
71     CYCLE\_CHARGING,
72     N\_CONTROL\_MODES
73 };

```

## 5.2 header/doxygen\_cite.h File Reference

Header file which simply cites the doxygen tool.

### 5.2.1 Detailed Description

Header file which simply cites the doxygen tool.

Ref: [van Heesch](#). [2023]

## 5.3 header/ElectricalLoad.h File Reference

Header file for the [ElectricalLoad](#) class.

```
#include "std_includes.h"
#include "../third_party/fast-cpp-csv-parser/csv.h"
Include dependency graph for ElectricalLoad.h:
```

This graph shows which files directly or indirectly include this file:

## Classes

- class [ElectricalLoad](#)

*A class which contains time and electrical load data. Intended to serve as a component class of [Model](#).*

### 5.3.1 Detailed Description

Header file for the [ElectricalLoad](#) class.

## 5.4 header/Interpolator.h File Reference

Header file for the [Interpolator](#) class.

```
#include "std_includes.h"
#include "../third_party/fast-cpp-csv-parser/csv.h"
Include dependency graph for Interpolator.h:
```

This graph shows which files directly or indirectly include this file:

## Classes

- struct [InterpolatorStruct1D](#)  
A struct which holds two parallel vectors for use in 1D interpolation.
- struct [InterpolatorStruct2D](#)  
A struct which holds two parallel vectors and a matrix for use in 2D interpolation.
- class [Interpolator](#)  
A class which contains interpolation data and functionality. Intended to serve as a component of the [Production](#) and [Storage](#) hierarchies.

### 5.4.1 Detailed Description

Header file for the [Interpolator](#) class.

## 5.5 header/Model.h File Reference

Header file for the [Model](#) class.

```

Include dependency graph for Model.h:

This graph shows which files directly or indirectly include this file:

## Classes

- struct [ModelInputs](#)

A structure which bundles the necessary inputs for the [Model](#) constructor. Provides default values for every necessary input (except `path_2_electrical_load_time_series`, for which a valid input must be provided).

- class [Model](#)

A container class which forms the centre of PGMcpp. The [Model](#) class is intended to serve as the primary user interface with the functionality of PGMcpp, and as such it contains all other classes.

### 5.5.1 Detailed Description

Header file for the [Model](#) class.

## 5.6 header/Production/Combustion/Combustion.h File Reference

Header file for the [Combustion](#) class.

```
#include "../Production.h"
```

Include dependency graph for Combustion.h:

This graph shows which files directly or indirectly include this file:

## Classes

- struct [CombustionInputs](#)  
A structure which bundles the necessary inputs for the [Combustion](#) constructor. Provides default values for every necessary input. Note that this structure encapsulates [ProductionInputs](#).
- struct [Emissions](#)  
A structure which bundles the emitted masses of various emissions chemistries.
- class [Combustion](#)  
The root of the [Combustion](#) branch of the [Production](#) hierarchy. This branch contains derived classes which model the production of energy by way of combustibles.

## Enumerations

- enum [CombustionType](#) { [DIESEL](#) , [N\\_COMBUSTION\\_TYPES](#) }  
An enumeration of the types of [Combustion](#) asset supported by PGMcpp.
- enum [FuelMode](#) { [FUEL\\_MODE\\_LINEAR](#) , [FUEL\\_MODE\\_LOOKUP](#) , [N\\_FUEL\\_MODES](#) }  
An enumeration of the fuel modes for the [Combustion](#) asset which are supported by PGMcpp.

### 5.6.1 Detailed Description

Header file for the [Combustion](#) class.

Header file for the [Noncombustion](#) class.

### 5.6.2 Enumeration Type Documentation

#### 5.6.2.1 CombustionType

```
enum CombustionType
```

An enumeration of the types of [Combustion](#) asset supported by PGMcpp.

Enumerator

<a href="#">DIESEL</a>	A diesel generator.
<a href="#">N_COMBUSTION_TYPES</a>	A simple hack to get the number of elements in <a href="#">CombustionType</a> .

```
58         {
59     DIESEL,
60     N\_COMBUSTION\_TYPES
61 };
```

#### 5.6.2.2 FuelMode

```
enum FuelMode
```

An enumeration of the fuel modes for the [Combustion](#) asset which are supported by PGMcpp.

### Enumerator

FUEL_MODE_LINEAR	A linearized fuel curve model (i.e., HOMER-like model)
FUEL_MODE_LOOKUP	Interpolating over a given fuel lookup table.
N_FUEL_MODES	A simple hack to get the number of elements in FuelMode.

```

71     {
72     FUEL_MODE_LINEAR,
73     FUEL_MODE_LOOKUP,
74     N_FUEL_MODES
75 };

```

## 5.7 header/Production/Combustion/Diesel.h File Reference

Header file for the [Diesel](#) class.

```

#include "Combustion.h"

```

Include dependency graph for Diesel.h:

This graph shows which files directly or indirectly include this file:

## Classes

- struct [DieselInputs](#)

A structure which bundles the necessary inputs for the [Diesel](#) constructor. Provides default values for every necessary input. Note that this structure encapsulates [CombustionInputs](#).

- class [Diesel](#)

A derived class of the [Combustion](#) branch of [Production](#) which models production using a diesel generator.

### 5.7.1 Detailed Description

Header file for the [Diesel](#) class.

## 5.8 header/Production/Noncombustion/Hydro.h File Reference

Header file for the [Hydro](#) class.

```
#include "Noncombustion.h"
Include dependency graph for Hydro.h:
```

This graph shows which files directly or indirectly include this file:

## Classes

- struct [HydroInputs](#)

A structure which bundles the necessary inputs for the [Hydro](#) constructor. Provides default values for every necessary input. Note that this structure encapsulates [NoncombustionInputs](#).

- class [Hydro](#)

A derived class of the [Noncombustion](#) branch of [Production](#) which models production using a hydroelectric asset (either with reservoir or not).

## Enumerations

- enum [HydroTurbineType](#) { [HYDRO\\_TURBINE\\_PELTON](#) , [HYDRO\\_TURBINE\\_FRANCIS](#) , [HYDRO\\_TURBINE\\_KAPLAN](#) , [N\\_HYDRO\\_TURBINES](#) }

*An enumeration of the types of hydroelectric turbine supported by PGMcpp.*

- enum [HydroInterpKeys](#) { [GENERATOR\\_EFFICIENCY\\_INTERP\\_KEY](#) , [TURBINE\\_EFFICIENCY\\_INTERP\\_KEY](#) , [FLOW\\_TO\\_POWER\\_INTERP\\_KEY](#) , [N\\_HYDRO\\_INTERP\\_KEYS](#) }

*An enumeration of the [Interpolator](#) keys used by the [Hydro](#) asset.*

### 5.8.1 Detailed Description

Header file for the [Hydro](#) class.

### 5.8.2 Enumeration Type Documentation

#### 5.8.2.1 HydroInterpKeys

enum [HydroInterpKeys](#)

An enumeration of the [Interpolator](#) keys used by the [Hydro](#) asset.

##### Enumerator

<a href="#">GENERATOR_EFFICIENCY_INTERP_KEY</a>	The key for generator efficiency interpolation.
<a href="#">TURBINE_EFFICIENCY_INTERP_KEY</a>	The key for turbine efficiency interpolation.
<a href="#">FLOW_TO_POWER_INTERP_KEY</a>	The key for flow to power interpolation.
<a href="#">N_HYDRO_INTERP_KEYS</a>	A simple hack to get the number of elements in HydroInterpKeys.

```

72         {
73     GENERATOR\_EFFICIENCY\_INTERP\_KEY,
74     TURBINE\_EFFICIENCY\_INTERP\_KEY,
75     FLOW\_TO\_POWER\_INTERP\_KEY,
76     N\_HYDRO\_INTERP\_KEYS
77 };

```

#### 5.8.2.2 HydroTurbineType

enum [HydroTurbineType](#)

An enumeration of the types of hydroelectric turbine supported by PGMcpp.

##### Enumerator

<a href="#">HYDRO_TURBINE_PELTON</a>	A Pelton turbine (impluse)
<a href="#">HYDRO_TURBINE_FRANCIS</a>	A Francis turbine (reaction)
<a href="#">HYDRO_TURBINE_KAPLAN</a>	A Kaplan turbine (reaction)
<a href="#">N_HYDRO_TURBINES</a>	A simple hack to get the number of elements in HydroTurbineType.

```

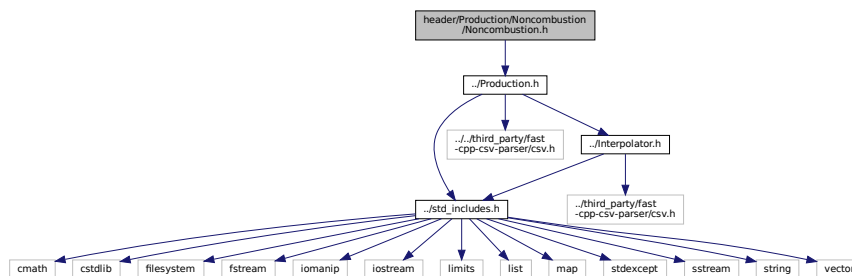

58     {
59         HYDRO_TURBINE_PELTON,
60         HYDRO_TURBINE_FRANCIS,
61         HYDRO_TURBINE_KAPLAN,
62         N_HYDRO_TURBINES
63     };

```

## 5.9 header/Production/Noncombustion/Noncombustion.h File Reference

```
#include "../Production.h"
```

Include dependency graph for Noncombustion.h:

This graph shows which files directly or indirectly include this file:

## Classes

- struct [NoncombustionInputs](#)

A structure which bundles the necessary inputs for the [Noncombustion](#) constructor. Provides default values for every necessary input. Note that this structure encapsulates [ProductionInputs](#).

- class [Noncombustion](#)

The root of the [Noncombustion](#) branch of the [Production](#) hierarchy. This branch contains derived classes which model controllable production which is not based on combustion.

## Enumerations

- enum [NoncombustionType](#) { [HYDRO](#) , [N\\_NONCOMBUSTION\\_TYPES](#) }

An enumeration of the types of [Noncombustion](#) asset supported by PGMcpp.

## 5.9.1 Enumeration Type Documentation

### 5.9.1.1 NoncombustionType

enum `NoncombustionType`

An enumeration of the types of `Noncombustion` asset supported by PGMcpp.

#### Enumerator

HYDRO	A hydroelectric generator (either with reservoir or not)
N_NONCOMBUSTION_TYPES	A simple hack to get the number of elements in <code>NoncombustionType</code> .

```

58         {
59     HYDRO,
60     N_NONCOMBUSTION_TYPES
61 };

```

## 5.10 header/Production/Production.h File Reference

Header file for the `Production` class.

```

#include "../std_includes.h"
#include "../../third_party/fast-cpp-csv-parser/csv.h"
#include "../Interpolator.h"

```

Include dependency graph for `Production.h`:

This graph shows which files directly or indirectly include this file:

## Classes

- struct [ProductionInputs](#)

A structure which bundles the necessary inputs for the [Production](#) constructor. Provides default values for every necessary input.

- class [Production](#)

The base class of the [Production](#) hierarchy. This hierarchy contains derived classes which model the production of energy, be it renewable or otherwise.

### 5.10.1 Detailed Description

Header file for the [Production](#) class.

## 5.11 header/Production/Renewable/Renewable.h File Reference

Header file for the [Renewable](#) class.

```
#include "../Production.h"
```

Include dependency graph for Renewable.h:

This graph shows which files directly or indirectly include this file:

## Classes

- struct [RenewableInputs](#)

A structure which bundles the necessary inputs for the [Renewable](#) constructor. Provides default values for every necessary input. Note that this structure encapsulates [ProductionInputs](#).

- class [Renewable](#)

The root of the [Renewable](#) branch of the [Production](#) hierarchy. This branch contains derived classes which model the renewable production of energy.

## Enumerations

- enum `RenewableType` {  
`SOLAR` , `TIDAL` , `WAVE` , `WIND` ,  
`N_RENEWABLE_TYPES` }

An enumeration of the types of `Renewable` asset supported by PGMcpp.

### 5.11.1 Detailed Description

Header file for the `Renewable` class.

### 5.11.2 Enumeration Type Documentation

#### 5.11.2.1 RenewableType

enum `RenewableType`

An enumeration of the types of `Renewable` asset supported by PGMcpp.

##### Enumerator

<code>SOLAR</code>	A solar photovoltaic (PV) array.
<code>TIDAL</code>	A tidal stream turbine (or tidal energy converter, TEC)
<code>WAVE</code>	A wave energy converter (WEC)
<code>WIND</code>	A wind turbine.
<code>N_RENEWABLE_TYPES</code>	A simple hack to get the number of elements in <code>RenewableType</code> .

```

58         {
59     SOLAR,
60     TIDAL,
61     WAVE,
62     WIND,
63     N_RENEWABLE_TYPES
64 };

```

## 5.12 header/Production/Renewable/Solar.h File Reference

Header file for the `Solar` class.

```
#include "Renewable.h"
```

Include dependency graph for Solar.h:

This graph shows which files directly or indirectly include this file:

## Classes

- struct [SolarInputs](#)  
A structure which bundles the necessary inputs for the [Solar](#) constructor. Provides default values for every necessary input. Note that this structure encapsulates [RenewableInputs](#).
- class [Solar](#)  
A derived class of the [Renewable](#) branch of [Production](#) which models solar production.

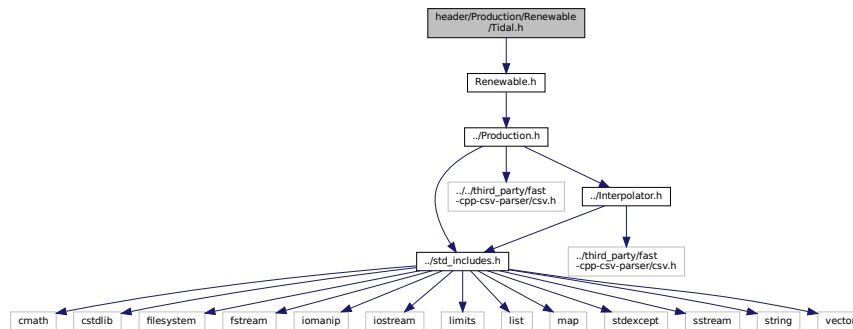

### 5.12.1 Detailed Description

Header file for the [Solar](#) class.

## 5.13 header/Production/Renewable/Tidal.h File Reference

Header file for the [Tidal](#) class.

```
#include "Renewable.h"
Include dependency graph for Tidal.h:
```

This graph shows which files directly or indirectly include this file:

## Classes

- struct [TidalInputs](#)  
A structure which bundles the necessary inputs for the [Tidal](#) constructor. Provides default values for every necessary input. Note that this structure encapsulates [RenewableInputs](#).
- class [Tidal](#)  
A derived class of the [Renewable](#) branch of [Production](#) which models tidal production.

## Enumerations

- enum [TidalPowerProductionModel](#) { [TIDAL\\_POWER\\_CUBIC](#) , [TIDAL\\_POWER\\_EXPONENTIAL](#) , [TIDAL\\_POWER\\_LOOKUP](#) , [N\\_TIDAL\\_POWER\\_PRODUCTION\\_MODELS](#) }

### 5.13.1 Detailed Description

Header file for the [Tidal](#) class.

### 5.13.2 Enumeration Type Documentation

#### 5.13.2.1 TidalPowerProductionModel

```
enum TidalPowerProductionModel
```

## Enumerator

TIDAL_POWER_CUBIC	A cubic power production model.
TIDAL_POWER_EXPONENTIAL	An exponential power production model.
TIDAL_POWER_LOOKUP	Lookup from a given set of power curve data.
N_TIDAL_POWER_PRODUCTION_MODELS	A simple hack to get the number of elements in TidalPowerProductionModel.

```

59
60     TIDAL_POWER_CUBIC,
61     TIDAL_POWER_EXPONENTIAL,
62     TIDAL_POWER_LOOKUP,
63     N_TIDAL_POWER_PRODUCTION_MODELS
64 };

```

## 5.14 header/Production/Renewable/Wave.h File Reference

Header file for the [Wave](#) class.

```
#include "Renewable.h"
Include dependency graph for Wave.h:
```

This graph shows which files directly or indirectly include this file:

## Classes

- struct [WaveInputs](#)

A structure which bundles the necessary inputs for the [Wave](#) constructor. Provides default values for every necessary input. Note that this structure encapsulates [RenewableInputs](#).

- class [Wave](#)

A derived class of the [Renewable](#) branch of [Production](#) which models wave production.

## Enumerations

- enum `WavePowerProductionModel` { `WAVE_POWER_GAUSSIAN` , `WAVE_POWER_PARABOLOID` , `WAVE_POWER_LOOKUP` , `N_WAVE_POWER_PRODUCTION_MODELS` }

### 5.14.1 Detailed Description

Header file for the `Wave` class.

### 5.14.2 Enumeration Type Documentation

#### 5.14.2.1 WavePowerProductionModel

```
enum WavePowerProductionModel
```

##### Enumerator

<code>WAVE_POWER_GAUSSIAN</code>	A Gaussian power production model.
<code>WAVE_POWER_PARABOLOID</code>	A paraboloid power production model.
<code>WAVE_POWER_LOOKUP</code>	Lookup from a given performance matrix.
<code>N_WAVE_POWER_PRODUCTION_MODELS</code>	A simple hack to get the number of elements in <code>WavePowerProductionModel</code> .

```
59
60     WAVE_POWER_GAUSSIAN,
61     WAVE_POWER_PARABOLOID,
62     WAVE_POWER_LOOKUP,
63     N_WAVE_POWER_PRODUCTION_MODELS
64 };
```

## 5.15 header/Production/Renewable/Wind.h File Reference

Header file for the `Wind` class.

```
#include "Renewable.h"
```

Include dependency graph for `Wind.h`:

This graph shows which files directly or indirectly include this file:

## Classes

- struct [WindInputs](#)

A structure which bundles the necessary inputs for the [Wind](#) constructor. Provides default values for every necessary input. Note that this structure encapsulates [RenewableInputs](#).

- class [Wind](#)

A derived class of the [Renewable](#) branch of [Production](#) which models wind production.

## Enumerations

- enum [WindPowerProductionModel](#) { [WIND\\_POWER\\_CUBIC](#) , [WIND\\_POWER\\_EXPONENTIAL](#) , [WIND\\_POWER\\_LOOKUP](#) , [N\\_WIND\\_POWER\\_PRODUCTION\\_MODELS](#) }

### 5.15.1 Detailed Description

Header file for the [Wind](#) class.

### 5.15.2 Enumeration Type Documentation

#### 5.15.2.1 WindPowerProductionModel

```
enum WindPowerProductionModel
```

Enumerator

<a href="#">WIND_POWER_CUBIC</a>	A cubic power production model.
<a href="#">WIND_POWER_EXPONENTIAL</a>	An exponential power production model.
<a href="#">WIND_POWER_LOOKUP</a>	Lookup from a given set of power curve data.
<a href="#">N_WIND_POWER_PRODUCTION_MODELS</a>	A simple hack to get the number of elements in <a href="#">WindPowerProductionModel</a> .

```
59     {
60         WIND\_POWER\_CUBIC,
```

```

61     WIND_POWER_EXPONENTIAL,
62     WIND_POWER_LOOKUP,
63     N_WIND_POWER_PRODUCTION_MODELS
64 };

```

## 5.16 header/Resources.h File Reference

Header file for the [Resources](#) class.

```

#include "std_includes.h"
#include "../third_party/fast-cpp-csv-parser/csv.h"
#include "ElectricalLoad.h"
#include "Production/Noncombustion/Noncombustion.h"
#include "Production/Renewable/Renewable.h"

```

Include dependency graph for Resources.h:

This graph shows which files directly or indirectly include this file:

## Classes

- class [Resources](#)

*A class which contains renewable resource data. Intended to serve as a component class of [Model](#).*

### 5.16.1 Detailed Description

Header file for the [Resources](#) class.

## 5.17 header/std\_includes.h File Reference

Header file which simply batches together some standard includes.

```
#include <cmath>
#include <cstdlib>
#include <filesystem>
#include <fstream>
#include <iomanip>
#include <iostream>
#include <limits>
#include <list>
#include <map>
#include <stdexcept>
#include <sstream>
#include <string>
#include <vector>
```

Include dependency graph for std\_includes.h:

This graph shows which files directly or indirectly include this file:

### 5.17.1 Detailed Description

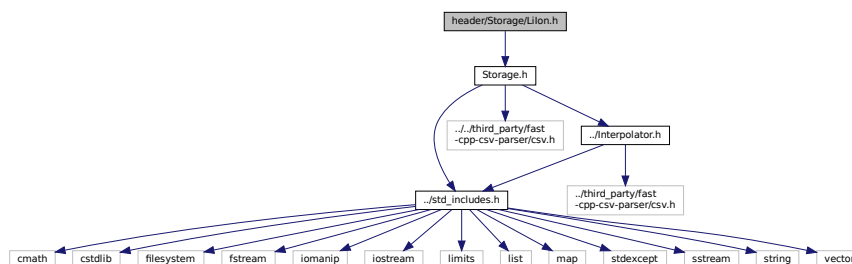

Header file which simply batches together some standard includes.

## 5.18 header/Storage/Lilon.h File Reference

Header file for the [Lilon](#) class.

```
#include "Storage.h"
```

Include dependency graph for Lilon.h:

This graph shows which files directly or indirectly include this file:

## Classes

- struct [LilonInputs](#)

A structure which bundles the necessary inputs for the [Lilon](#) constructor. Provides default values for every necessary input. Note that this structure encapsulates [StorageInputs](#).

- class [Lilon](#)

A derived class of [Storage](#) which models energy storage by way of lithium-ion batteries.

### 5.18.1 Detailed Description

Header file for the [Lilon](#) class.

## 5.19 header/Storage/Storage.h File Reference

Header file for the [Storage](#) class.

```
#include "../std_includes.h"
#include "../../third_party/fast-cpp-csv-parser/csv.h"
#include "../Interpolator.h"
```

Include dependency graph for Storage.h:

This graph shows which files directly or indirectly include this file:

## Classes

- struct [StorageInputs](#)  
A structure which bundles the necessary inputs for the [Storage](#) constructor. Provides default values for every necessary input.
- class [Storage](#)  
The base class of the [Storage](#) hierarchy. This hierarchy contains derived classes which model the storage of energy.

## Enumerations

- enum [StorageType](#) { [LIION](#) , [N\\_STORAGE\\_TYPES](#) }  
An enumeration of the types of [Storage](#) asset supported by PGMcpp.

### 5.19.1 Detailed Description

Header file for the [Storage](#) class.

### 5.19.2 Enumeration Type Documentation

#### 5.19.2.1 StorageType

```
enum StorageType
```

An enumeration of the types of [Storage](#) asset supported by PGMcpp.

Enumerator

<a href="#">LIION</a>	A system of lithium ion batteries.
<a href="#">N_STORAGE_TYPES</a>	A simple hack to get the number of elements in <a href="#">StorageType</a> .

```
61     {
62     LIION,
```

```

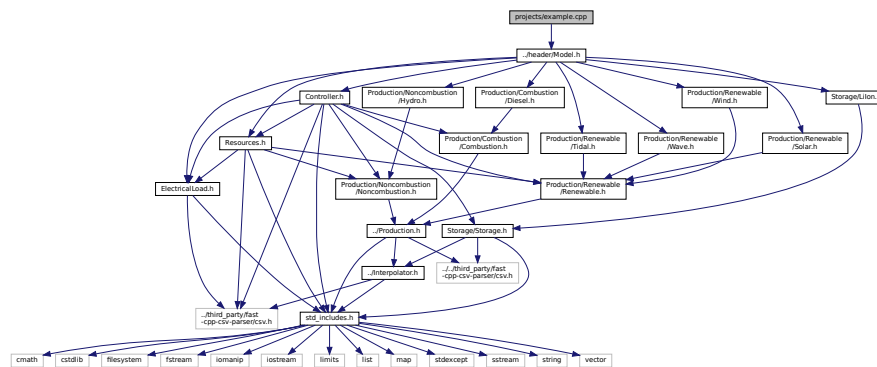

63     N_STORAGE_TYPES
64 };

```

## 5.20 projects/example.cpp File Reference

```
#include "../header/Model.h"
```

Include dependency graph for example.cpp:

## Functions

- int [main](#) (int argc, char \*\*argv)

### 5.20.1 Function Documentation

#### 5.20.1.1 main()

```

int main (
    int argc,
    char ** argv )
{
    /*
    * 1. construct Model object
    *
    * This block constructs a Model object, which is the central container for the
    * entire microgrid model.
    *
    * The first argument that must be provided to the Model constructor is a valid
    * path (either relative or absolute) to a time series of electrical load data.
    * For an example of the expected format, see
    *
    * data/test/electrical_load/electrical_load_generic_peak-500kW_1yr_dt-1hr.csv
    *
    * Note that the length of the given electrical load time series defines the
    * modelled project life (so if you want to model n years of microgrid operation,
    * then you must pass a path to n years worth of electrical load data). In addition,
    * the given electrical load time series defines which points in time are modelled.
    * As such, all subsequent time series data which is passed in must (1) be of the
    * same length as the electrical load time series, and (2) provide data for the
    * same set of points in time. Of course, the electrical load time series can be
    * of arbitrary length, and it need not be a uniform time series.
    *
    * The second argument that one can provide is the desired dispatch control mode.
    */
}

```

```

74      * If nothing is given here, then the model will default to simple load following
75      * control. However, one can stipulate which control mode to use by altering the
76      * control_mode attribute of the ModelInputs structure. In this case, the
77      * cycle charging control mode is being set.
78      */
79
80      std::string path_2_electrical_load_time_series =
81          "data/test/electrical_load/electrical_load_generic_peak-500kW_1yr_dt-1hr.csv";
82
83      ModelInputs model_inputs;
84
85      model_inputs.path_2_electrical_load_time_series =
86          path_2_electrical_load_time_series;
87
88      model_inputs.control_mode = ControlMode :: CYCLE_CHARGING;
89
90      Model model(model_inputs);
91
92
93
94      /*
95      * 2. add Diesel objects to Model
96      *
97      * This block defines and adds a set of diesel generators to the Model object.
98      *
99      * In this example, a single DieselInputs structure is used to define and add
100     * three diesel generators to the model.
101     *
102     * The first diesel generator is defined as a 300 kW generator (which shows an
103     * example of how to access and alter an encapsulated attribute of DieselInputs).
104     * In addition, the diesel generator is taken to be a sunk cost (and so no capital
105     * cost is incurred in the first time step; the opposite is true for non-sunk
106     * assets).
107     *
108     * The last two diesel generators are defined as 150 kW each. Likewise, they are
109     * also sunk assets (since the same DieselInputs structure is being re-used without
110     * overwriting the is_sunk attribute).
111     *
112     * For more details on the various attributes of DieselInputs, refer to the
113     * PGMcpp manual. For instance, note that no economic inputs are given; in this
114     * example, the default values apply.
115     */
116
117     DieselInputs diesel_inputs;
118
119     // 2.1. add 1 x 300 kW diesel generator (since mean load is ~250 kW)
120     diesel_inputs.combustion_inputs.production_inputs.capacity_kW = 300;
121     diesel_inputs.combustion_inputs.production_inputs.is_sunk = true;
122
123     model.addDiesel(diesel_inputs);
124
125     // 2.2. add 2 x 150 kW diesel generators (since max load is 500 kW)
126     diesel_inputs.combustion_inputs.production_inputs.capacity_kW = 150;
127
128     model.addDiesel(diesel_inputs);
129     model.addDiesel(diesel_inputs);
130
131
132
133     /*
134     * 3. add renewable resources to Model
135     *
136     * This block adds a set of renewable resource time series to the Model object.
137     *
138     * The first resource added is a solar resource time series, which gives
139     * horizontal irradiance [kW/m2] at each point in time. Again, remember that all
140     * given time series must align with the electrical load time series (i.e., same
141     * length, same points). For an example of the expected format, see
142     *
143     * data/test/resources/solar_GHI_peak-1kWm2_1yr_dt-1hr.csv
144     *
145     * Finally, note the declaration of a solar resource key. This variable will be
146     * re-used later to associate a solar PV array object with this particular solar
147     * resource. This method of key association between resource and asset allows for
148     * greater flexibility in modelling production assets that are exposed to different
149     * renewable resources (due to being geographically separated, etc.).
150     *
151     * The second resource added is a tidal resource time series, which gives tidal
152     * stream speed [m/s] at each point in time. For an example of the expected format,
153     * see
154     *
155     * data/test/resources/tidal_speed_peak-3ms_1yr_dt-1hr.csv
156     *
157     * Again, note the tidal resource key.
158     *
159     * The third resource added is a wave resource time series, which gives significant
160     * wave height [m] and energy period [s] at each point in time. For an example of

```

```

161      * the expected format, see
162      *
163      * data/test/resources/waves_H_s_peak-8m_T_e_peak-15s_1yr_dt-1hr.csv
164      *
165      * Again, note the wave resource key.
166      *
167      * The fourth resource added is a wind resource time series, which gives wind speed
168      * [m/s] at each point in time. For an example of the expected format, see
169      *
170      * data/test/resources/wind_speed_peak-25ms_1yr_dt-1hr.csv
171      *
172      * Again, note the wind resource key.
173      *
174      * The fifth resource added is a hydro resource time series, which gives inflow
175      * rate [m3/hr] at each point in time. For an example of the expected format, see
176      *
177      * data/test/resources/hydro_inflow_peak-20000m3hr_1yr_dt-1hr.csv
178      *
179      * Again, note the hydro resource key.
180      */
181
182      // 3.1. add solar resource time series
183      int solar_resource_key = 0;
184      std::string path_2_solar_resource_data =
185          "data/test/resources/solar_GHI_peak-1kWm2_1yr_dt-1hr.csv";
186

235      );
236
237
238      /*
239      * 4. add Hydro object to Model
240      *
241      * This block defines and adds a hydroelectric asset to the Model object.
242      *
243      * In this example, a 300 kW hydroelectric station with a 10,000 m3 reservoir
244      * is defined. The initial reservoir state is set to 50% (so half full), and the
245      * hydroelectric asset is taken to be a sunk asset (so no capital cost incurred
246      * in the first time step). Note the association with the previously given hydro

```

```

248     * resource series by way of the hydro resource key.
249     *
250     * For more details on the various attributes of HydroInputs, refer to the
251     * PGMcpp manual. For instance, note that no economic inputs are given; in this
252     * example, the default values apply.
253     */
254
255     HydroInputs hydro_inputs;
256     hydro_inputs.noncombustion_inputs.production_inputs.capacity_kW = 300;
257     hydro_inputs.reservoir_capacity_m3 = 10000;
258     hydro_inputs.init_reservoir_state = 0.5;
259     hydro_inputs.noncombustion_inputs.production_inputs.is_sunk = true;
260     hydro_inputs.resource_key = hydro_resource_key;
261
262     model.addHydro(hydro_inputs);
263
264
265
266     /*
267     * 5. add Renewable objects to Model
268     *
269     * This block defines and adds a set of renewable production assets to the Model
270     * object.
271     *
272     * The first block defines and adds a solar PV array to the Model object. In this
273     * example, the installed solar capacity is set to 250 kW. Note the association
274     * with the previously given solar resource series by way of the solar resource
275     * key. Also, note that this asset is not taken as sunk (as the is_sunk attribute
276     * of the SolarInputs structure is unchanged and thus defaults to true). As such,
277     * this asset will incur a capital cost in the first time step.
278     *
279     * For more details on the various attributes of SolarInputs, refer to the PGMcpp
280     * manual. For instance, note that no economic inputs are given; in this
281     * example, the default values apply.
282     *
283     * The second block defines and adds a tidal turbine to the Model object. In this
284     * example, the installed tidal capacity is set to 120 kW. In addition, the design
285     * speed of the asset (i.e., the speed at which the rated capacity is achieved) is
286     * set to 2.5 m/s. Note the association with the previously given tidal resource
287     * series by way of the tidal resource key.
288     *
289     * For more details on the various attributes of TidalInputs, refer to the PGMcpp
290     * manual. For instance, note that no economic inputs are given; in this
291     * example, the default values apply.
292     *
293     * The third block defines and adds a wind turbine to the Model object. In this
294     * example, the installed wind capacity is set to 150 kW. In addition, the design
295     * speed of the asset is not given, and so will default to 8 m/s. Note the
296     * association with the previously given tidal resource series by way of the wind
297     * resource key.
298     *
299     * For more details on the various attributes of WindInputs, refer to the PGMcpp
300     * manual. For instance, note that no economic inputs are given; in this
301     * example, the default values apply.
302     *
303     * The fourth block defines and adds a wave energy converter to the Model object.
304     * In this example, the installed wave capacity is set to 100 kW. Note the
305     * association with the previously given wave resource series by way of the wave
306     * resource key.
307     *
308     * For more details on the various attributes of WaveInputs, refer to the PGMcpp
309     * manual. For instance, note that no economic inputs are given; in this
310     * example, the default values apply.
311     */

    &Wave::design_energy_period_s )
```

## 5.31 pybindings/snippets/Production/Renewable/PYBIND11\_Wind.cpp File Reference

Bindings file for the [Wind](#) class. Intended to be #include'd in [PYBIND11\\_PGM.cpp](#).

This graph shows which files directly or indirectly include this file:

## Functions

- `WindPowerProductionModel::WIND_POWER_EXPONENTIAL` `value` ("WIND\_POWER\_LOOKUP", `WindPowerProductionModel::WIND_POWER_LOOKUP`) `.value`("N\_WIND\_POWER\_PRODUCTION\_MODELS"
- `&WindInputs::renewable_inputs` `def_readwrite` ("resource\_key", `&WindInputs::resource_key`) `.def_readwrite`("capital\_cost"
- `&WindInputs::renewable_inputs` `&WindInputs::capital_cost` `def_readwrite` ("operation\_maintenance\_cost\_kWh", `&WindInputs::operation_maintenance_cost_kWh`) `.def_readwrite`("design\_speed\_ms"

## Variables

- `&WindInputs::renewable_inputs` `&WindInputs::capital_cost` `&WindInputs::design_speed_ms` `def_readwrite`("power\_model", `&WindInputs::power_model`) `.def`(`pybind11 &Wind::design_speed_ms` `def_readwrite`("power\_model", `&Wind::power_model`) `.def_readwrite`("power\_model\_string"

### 5.31.1 Detailed Description

Bindings file for the `Wind` class. Intended to be `#include'd` in `PYBIND11_PGM.cpp`.

Ref: [Jakob \[2023\]](#)

A file which instructs `pybind11` how to build Python bindings for the `Wind` class. Only public attributes/methods are bound!

### 5.31.2 Function Documentation

#### 5.31.2.1 `def_readwrite()` [1/2]

```
& WindInputs::renewable_inputs & WindInputs::capital_cost def_readwrite (
    "operation_maintenance_cost_kWh" ,
    &WindInputs::operation_maintenance_cost_kWh )
```

#### 5.31.2.2 `def_readwrite()` [2/2]

```
& WindInputs::renewable_inputs def_readwrite (
    "resource_key" ,
    &WindInputs::resource_key )
```

#### 5.31.2.3 `value()`

```
WindPowerProductionModel::WIND_POWER_EXPONENTIAL value (
    "WIND_POWER_LOOKUP" ,
    WindPowerProductionModel::WIND_POWER_LOOKUP )
```

### 5.31.3 Variable Documentation

#### 5.31.3.1 def\_readwrite

```
& WindInputs::renewable_inputs & WindInputs::capital_cost & WindInputs::design_speed_ms def↔
_readwrite ("power_model", &WindInputs::power_model) .def(pybind11 & Wind::design_speed_ms
def_readwrite("power_model", &Wind::power_model) .def_readwrite("power_model_string" (
    "power_model" ,
    &Wind::power_model )
```

## 5.32 pybindings/snippets/PYBIND11\_Controller.cpp File Reference

Bindings file for the [Controller](#) class. Intended to be #include'd in [PYBIND11\\_PGM.cpp](#).

This graph shows which files directly or indirectly include this file:

## Functions

- [ControlMode::LOAD\\_FOLLOWING](#) value ("CYCLE\_CHARGING", ControlMode::CYCLE\_CHARGING) .value("N\_CONTROL\_MODES"
- [&Controller::control\\_mode](#) def\_readwrite ("control\_string", &Controller::control\_string) .def\_readwrite("net↔\_load\_vec\_kW"
- [&Controller::control\\_mode](#) &Controller::net\_load\_vec\_kW def\_readwrite ("missed\_load\_vec\_kW", &Controller↔::missed\_load\_vec\_kW) .def\_readwrite("combustion\_map"
- [&Controller::control\\_mode](#) &Controller::net\_load\_vec\_kW &Controller::combustion\_map def (pybind11↔::init<>()) .def("setControlMode"
- [&Controller::control\\_mode](#) &Controller::net\_load\_vec\_kW &Controller::combustion\_map &Controller::setControlMode def ("init", &Controller::init) .def("applyDispatchControl"
- [&Controller::control\\_mode](#) &Controller::net\_load\_vec\_kW &Controller::combustion\_map &Controller::setControlMode &Controller::applyDispatchControl def ("clear", &Controller::clear)

### 5.32.1 Detailed Description

Bindings file for the [Controller](#) class. Intended to be #include'd in [PYBIND11\\_PGM.cpp](#).

Ref: [Jakob \[2023\]](#)

A file which instructs pybind11 how to build Python bindings for the [Controller](#) class. Only public attributes/methods are bound!

### 5.32.2 Function Documentation

#### 5.32.2.1 `def()` [1/3]

```
& Controller::control_mode & Controller::net_load_vec_kW & Controller::combustion_map & Controller::setControl
& Controller::applyDispatchControl def (
    "clear" ,
    &Controller::clear )
```

#### 5.32.2.2 `def()` [2/3]

```
& Controller::control_mode & Controller::net_load_vec_kW & Controller::combustion_map & Controller::setControl
def (
    "init" ,
    &Controller::init )
```

#### 5.32.2.3 `def()` [3/3]

```
& Controller::control_mode & Controller::net_load_vec_kW & Controller::combustion_map def (
    pybind11::init<> () )
```

#### 5.32.2.4 `def_readwrite()` [1/2]

```
& Controller::control_mode def_readwrite (
    "control_string" ,
    &Controller::control_string )
```

5.32.2.5 `def_readwrite()` [2/2]

```
& Controller::control_mode & Controller::net_load_vec_kW def_readwrite (
    "missed_load_vec_kW" ,
    &Controller::missed_load_vec_kW )
```

5.32.2.6 `value()`

```
ControlMode::LOAD_FOLLOWING value (
    "CYCLE_CHARGING" ,
    ControlMode::CYCLE_CHARGING )
```

## 5.33 pybindings/snippets/PYBIND11\_ElectricalLoad.cpp File Reference

Bindings file for the [ElectricalLoad](#) class. Intended to be #include'd in [PYBIND11\\_PGM.cpp](#).

This graph shows which files directly or indirectly include this file:

## Functions

- [&ElectricalLoad::n\\_points](#) [def\\_readwrite](#) ("n\_years", &ElectricalLoad::n\_years) .[def\\_readwrite](#)("min\_load\_kW", &ElectricalLoad::min\_load\_kW)
- [&ElectricalLoad::n\\_points](#) [&ElectricalLoad::min\\_load\\_kW](#) [def\\_readwrite](#) ("mean\_load\_kW", &ElectricalLoad::mean\_load\_kW) .[def\\_readwrite](#)("max\_load\_kW", &ElectricalLoad::max\_load\_kW)
- [&ElectricalLoad::n\\_points](#) [&ElectricalLoad::min\\_load\\_kW](#) [&ElectricalLoad::max\\_load\\_kW](#) [def\\_readwrite](#) ("path\_2\_electrical\_load\_time\_series", &ElectricalLoad::path\_2\_electrical\_load\_time\_series) .[def\\_readwrite](#)("time\_vec\_hrs", &ElectricalLoad::time\_vec\_hrs)
- [&ElectricalLoad::n\\_points](#) [&ElectricalLoad::min\\_load\\_kW](#) [&ElectricalLoad::max\\_load\\_kW](#) [&ElectricalLoad::time\\_vec\\_hrs](#) [def\\_readwrite](#) ("dt\_vec\_hrs", &ElectricalLoad::dt\_vec\_hrs) .[def\\_readwrite](#)("load\_vec\_kW", &ElectricalLoad::load\_vec\_kW)

### 5.33.1 Detailed Description

Bindings file for the [ElectricalLoad](#) class. Intended to be #include'd in [PYBIND11\\_PGM.cpp](#).

Ref: [Jakob \[2023\]](#)

A file which instructs pybind11 how to build Python bindings for the [ElectricalLoad](#) class. Only public attributes/methods are bound!

### 5.33.2 Function Documentation

#### 5.33.2.1 `def_readwrite()` [1/4]

```
& ElectricalLoad::n\_points & ElectricalLoad::min\_load\_kW & ElectricalLoad::max\_load\_kW & ElectricalLoad::time\_
def_readwrite (
    "dt_vec_hrs" ,
    &ElectricalLoad::dt\_vec\_hrs )
```

#### 5.33.2.2 `def_readwrite()` [2/4]

```
& ElectricalLoad::n\_points & ElectricalLoad::min\_load\_kW def_readwrite (
    "mean_load_kW" ,
    &ElectricalLoad::mean\_load\_kW )
```

#### 5.33.2.3 `def_readwrite()` [3/4]

```
& ElectricalLoad::n\_points def_readwrite (
    "n_years" ,
    &ElectricalLoad::n\_years )
```

#### 5.33.2.4 `def_readwrite()` [4/4]

```
& ElectricalLoad::n\_points & ElectricalLoad::min\_load\_kW & ElectricalLoad::max\_load\_kW def_↵
readwrite (
    "path_2_electrical_load_time_series" ,
    &ElectricalLoad::path\_2\_electrical\_load\_time\_series )
```

## 5.34 pybindings/snippets/PYBIND11\_Interpolator.cpp File Reference

Bindings file for the [Interpolator](#) class. Intended to be #include'd in [PYBIND11\\_PGM.cpp](#).

This graph shows which files directly or indirectly include this file:

### Functions

- [&InterpolatorStruct1D::n\\_points](#) [def\\_readwrite](#) ("x\_vec", &InterpolatorStruct1D::x\_vec) [.def\\_readwrite](#)("min\_x", &InterpolatorStruct1D::min\_x) [def\\_readwrite](#)("max\_x", &InterpolatorStruct1D::max\_x) [.def\\_readwrite](#)("y\_vec", &InterpolatorStruct1D::y\_vec)
- [&InterpolatorStruct1D::n\\_points](#) [&InterpolatorStruct1D::min\\_x](#) [&InterpolatorStruct1D::y\\_vec](#) [def](#) (pybind11::init())
- [&InterpolatorStruct2D::n\\_rows](#) [def\\_readwrite](#) ("n\_cols", &InterpolatorStruct2D::n\_cols) [.def\\_readwrite](#)("x\_vec", &InterpolatorStruct2D::x\_vec) [.def\\_readwrite](#)("min\_x", &InterpolatorStruct2D::min\_x) [.def\\_readwrite](#)("max\_x", &InterpolatorStruct2D::max\_x) [.def\\_readwrite](#)("y\_vec", &InterpolatorStruct2D::y\_vec) [.def\\_readwrite](#)("min\_y", &InterpolatorStruct2D::min\_y) [.def\\_readwrite](#)("max\_y", &InterpolatorStruct2D::max\_y) [.def\\_readwrite](#)("z\_matrix", &InterpolatorStruct2D::z\_matrix)
- [&Interpolator::interp\\_map\\_1D](#) [def\\_readwrite](#) ("path\_map\_1D", &Interpolator::path\_map\_1D) [.def\\_readwrite](#)("interp\_map\_2D", &Interpolator::path\_map\_2D)

### 5.34.1 Detailed Description

Bindings file for the [Interpolator](#) class. Intended to be #include'd in [PYBIND11\\_PGM.cpp](#).

Ref: [Jakob \[2023\]](#)

A file which instructs pybind11 how to build Python bindings for the [Interpolator](#) class. Only public attributes/methods are bound!

### 5.34.2 Function Documentation

**5.34.2.1 def()**

```
& InterpolatorStruct1D::n_points & InterpolatorStruct1D::min_x & InterpolatorStruct1D::y_vec
def (
    pybind11::init() )
```

**5.34.2.2 def\_readwrite() [1/7]**

```
& InterpolatorStruct1D::n_points & InterpolatorStruct1D::min_x def_readwrite (
    "max_x" ,
    &InterpolatorStruct1D::max_x )
```

**5.34.2.3 def\_readwrite() [2/7]**

```
& InterpolatorStruct2D::n_rows & InterpolatorStruct2D::x_vec & InterpolatorStruct2D::max_x &
InterpolatorStruct2D::min_y def_readwrite (
    "max_y" ,
    &InterpolatorStruct2D::max_y )
```

**5.34.2.4 def\_readwrite() [3/7]**

```
& InterpolatorStruct2D::n_rows & InterpolatorStruct2D::x_vec def_readwrite (
    "min_x" ,
    &InterpolatorStruct2D::min_x )
```

**5.34.2.5 def\_readwrite() [4/7]**

```
& InterpolatorStruct2D::n_rows def_readwrite (
    "n_cols" ,
    &InterpolatorStruct2D::n_cols )
```

**5.34.2.6 def\_readwrite() [5/7]**

```
& Interpolator::interp_map_1D def_readwrite (
    "path_map_1D" ,
    &Interpolator::path_map_1D )
```

5.34.2.7 `def_readwrite()` [6/7]

```
& InterpolatorStruct1D::n_points def_readwrite (
    "x_vec" ,
    &InterpolatorStruct1D::x_vec )
```

5.34.2.8 `def_readwrite()` [7/7]

```
& InterpolatorStruct2D::n_rows & InterpolatorStruct2D::x_vec & InterpolatorStruct2D::max_x
def_readwrite (
    "y_vec" ,
    &InterpolatorStruct2D::y_vec )
```

## 5.35 pybindings/snippets/PYBIND11\_Model.cpp File Reference

Bindings file for the [Model](#) class. Intended to be #include'd in [PYBIND11\\_PGM.cpp](#).

This graph shows which files directly or indirectly include this file:

### Variables

- `&ModelInputs::path_2_electrical_load_time_series` `def_readwrite("control_mode", &ModelInputs::control_mode)` `.def(pybind11 &Model::total_fuel_consumed_L` `def_readwrite ("total_emissions", &Model::total_emissions)` `.def_readwrite("net_present_cost"`

### 5.35.1 Detailed Description

Bindings file for the [Model](#) class. Intended to be #include'd in [PYBIND11\\_PGM.cpp](#).

Ref: [Jakob \[2023\]](#)

A file which instructs pybind11 how to build Python bindings for the [Model](#) class. Only public attributes/methods are bound!

## 5.35.2 Variable Documentation

### 5.35.2.1 def\_readwrite

```
& ModelInputs::path_2_electrical_load_time_series def_readwrite ("control_mode", &Model↵
Inputs::control_mode) .def(pybind11 & Model::total_fuel_consumed_L & Model::net_present_cost &
Model::total_dispatch_discharge_kWh & Model::controller & Model::resources & Model::noncombustion_ptr_vec
def_readwrite("renewable_ptr_vec", &Model::renewable_ptr_vec) .def_readwrite("storage_ptr_vec"
(
    "total_emissions" ,
    &Model::total_emissions )
```

## 5.36 pybindings/snippets/PYBIND11\_Resources.cpp File Reference

Bindings file for the [Resources](#) class. Intended to be #include'd in [PYBIND11\\_PGM.cpp](#).

This graph shows which files directly or indirectly include this file:

## Functions

- [&Resources::resource\\_map\\_1D](#) [def\\_readwrite](#) ("string\_map\_1D", &Resources::string\_map\_1D) [.def↵](#)  
readwrite("path\_map\_1D"
- [&Resources::resource\\_map\\_1D](#) &Resources::path\_map\_1D [def\\_readwrite](#) ("resource\_map\_2D", &Resources↵  
::resource\_map\_2D) [.def\\_readwrite](#) ("string\_map\_2D"

### 5.36.1 Detailed Description

Bindings file for the [Resources](#) class. Intended to be #include'd in [PYBIND11\\_PGM.cpp](#).

Ref: [Jakob \[2023\]](#)

A file which instructs pybind11 how to build Python bindings for the [Resources](#) class. Only public attributes/methods are bound!

## 5.36.2 Function Documentation

### 5.36.2.1 `def_readwrite()` [1/2]

```
& Resources::resource_map_1D & Resources::path_map_1D def_readwrite (
    "resource_map_2D" ,
    &Resources::resource_map_2D )
```

### 5.36.2.2 `def_readwrite()` [2/2]

```
& Resources::resource_map_1D def_readwrite (
    "string_map_1D" ,
    &Resources::string_map_1D )
```

## 5.37 pybindings/snippets/Storage/PYBIND11\_Lilon.cpp File Reference

Bindings file for the [Lilon](#) class. Intended to be `#include'd` in [PYBIND11\\_PGM.cpp](#).

This graph shows which files directly or indirectly include this file:

## Functions

- `&LilonInputs::storage_inputs def_readwrite ("capital_cost", &LilonInputs::capital_cost) .def_readwrite("operation↔_maintenance_cost_kWh"`
- `&LilonInputs::storage_inputs &LilonInputs::operation_maintenance_cost_kWh def_readwrite ("init_SOC", &LilonInputs::init_SOC) .def_readwrite("min_SOC"`
- `&LilonInputs::storage_inputs &LilonInputs::operation_maintenance_cost_kWh &LilonInputs::min_SOC def_readwrite ("hysteresis_SOC", &LilonInputs::hysteresis_SOC) .def_readwrite("max_SOC"`

- `&LilonInputs::storage_inputs` `&LilonInputs::operation_maintenance_cost_kWh` `&LilonInputs::min_SOC` `&LilonInputs::max_SOC` `def_readwrite` ("charging\_efficiency", `&LilonInputs::charging_efficiency`) `.def_readwrite`("discharging\_efficiency"
- `&LilonInputs::storage_inputs` `&LilonInputs::operation_maintenance_cost_kWh` `&LilonInputs::min_SOC` `&LilonInputs::max_SOC` `&LilonInputs::discharging_efficiency` `def_readwrite` ("replace\_SOH", `&LilonInputs::replace_SOH`) `.def_readwrite`("power\_degradation\_flag"
- `&LilonInputs::storage_inputs` `&LilonInputs::operation_maintenance_cost_kWh` `&LilonInputs::min_SOC` `&LilonInputs::max_SOC` `&LilonInputs::discharging_efficiency` `&LilonInputs::power_degradation_flag` `def_readwrite` ("degradation\_alpha", `&LilonInputs::degradation_alpha`) `.def_readwrite`("degradation\_beta"
- `&LilonInputs::storage_inputs` `&LilonInputs::operation_maintenance_cost_kWh` `&LilonInputs::min_SOC` `&LilonInputs::max_SOC` `&LilonInputs::discharging_efficiency` `&LilonInputs::power_degradation_flag` `&LilonInputs::degradation_beta` `def_readwrite` ("degradation\_B\_hat\_cal\_0", `&LilonInputs::degradation_B_hat_cal_0`) `.def_readwrite`("degradation\_r\_cal"
- `&LilonInputs::storage_inputs` `&LilonInputs::operation_maintenance_cost_kWh` `&LilonInputs::min_SOC` `&LilonInputs::max_SOC` `&LilonInputs::discharging_efficiency` `&LilonInputs::power_degradation_flag` `&LilonInputs::degradation_beta` `&LilonInputs::degradation_r_cal` `def_readwrite` ("degradation\_Ea\_cal\_0", `&LilonInputs::degradation_Ea_cal_0`) `.def_readwrite`("degradation\_a\_cal"
- `&LilonInputs::storage_inputs` `&LilonInputs::operation_maintenance_cost_kWh` `&LilonInputs::min_SOC` `&LilonInputs::max_SOC` `&LilonInputs::discharging_efficiency` `&LilonInputs::power_degradation_flag` `&LilonInputs::degradation_beta` `&LilonInputs::degradation_r_cal` `&LilonInputs::degradation_a_cal` `def_readwrite` ("degradation\_s\_cal", `&LilonInputs::degradation_s_cal`) `.def_readwrite`("gas\_constant\_JmolK"

## Variables

Storage::charging_power_vec_kW def_readwrite("discharging_power_vec_kW", &Storage::discharging_
_power_vec_kW) .def_readwrite("capital_cost_vec" (
    "interpolator" ,
    &Storage::interpolator )
```

## 5.39 source/Controller.cpp File Reference

Implementation file for the [Controller](#) class.

```
#include "../header/Controller.h"
Include dependency graph for Controller.cpp:
```

### 5.39.1 Detailed Description

Implementation file for the [Controller](#) class.

A class which contains a various dispatch control logic. Intended to serve as a component class of [Controller](#).

## 5.40 source/ElectricalLoad.cpp File Reference

Implementation file for the [ElectricalLoad](#) class.

```
#include "../header/ElectricalLoad.h"
Include dependency graph for ElectricalLoad.cpp:
```

### 5.40.1 Detailed Description

Implementation file for the [ElectricalLoad](#) class.

A class which contains time and electrical load data. Intended to serve as a component class of [Model](#).

## 5.41 source/Interpolator.cpp File Reference

Implementation file for the [Interpolator](#) class.

```
#include "../header/Interpolator.h"
```

Include dependency graph for Interpolator.cpp:

### 5.41.1 Detailed Description

Implementation file for the [Interpolator](#) class.

A class which contains interpolation data and functionality. Intended to serve as a component of the [Production](#) and [Storage](#) hierarchies.

## 5.42 source/Model.cpp File Reference

Implementation file for the [Model](#) class.

```
#include "../header/Model.h"
```

Include dependency graph for Model.cpp:

### 5.42.1 Detailed Description

Implementation file for the [Model](#) class.

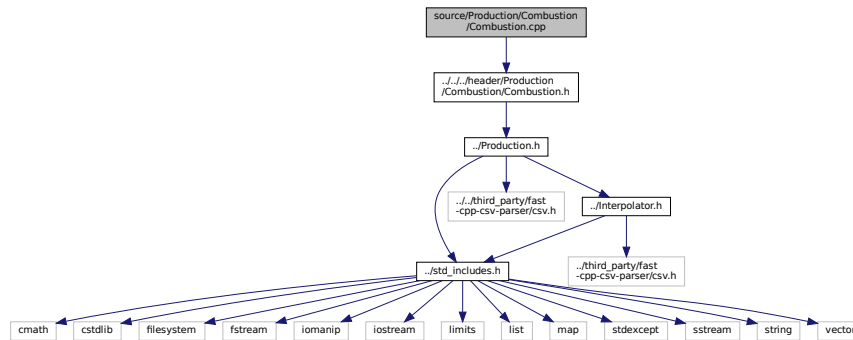

A container class which forms the centre of PGMcpp. The [Model](#) class is intended to serve as the primary user interface with the functionality of PGMcpp, and as such it contains all other classes.

## 5.43 source/Production/Combustion/Combustion.cpp File Reference

Implementation file for the [Combustion](#) class.

```
#include "../.../header/Production/Combustion/Combustion.h"
```

Include dependency graph for Combustion.cpp:

### 5.43.1 Detailed Description

Implementation file for the [Combustion](#) class.

The root of the [Combustion](#) branch of the [Production](#) hierarchy. This branch contains derived classes which model the production of energy by way of combustibles.

## 5.44 source/Production/Combustion/Diesel.cpp File Reference

Implementation file for the [Diesel](#) class.

```
#include "../.../header/Production/Combustion/Diesel.h"
```

Include dependency graph for Diesel.cpp:

### 5.44.1 Detailed Description

Implementation file for the [Diesel](#) class.

A derived class of the [Combustion](#) branch of [Production](#) which models production using a diesel generator.

## 5.45 source/Production/Noncombustion/Hydro.cpp File Reference

Implementation file for the [Hydro](#) class.

```
#include "../.../header/Production/Noncombustion/Hydro.h"
```

Include dependency graph for Hydro.cpp:

### 5.45.1 Detailed Description

Implementation file for the [Hydro](#) class.

A derived class of the [Noncombustion](#) branch of [Production](#) which models production using a hydroelectric asset (either with reservoir or not).

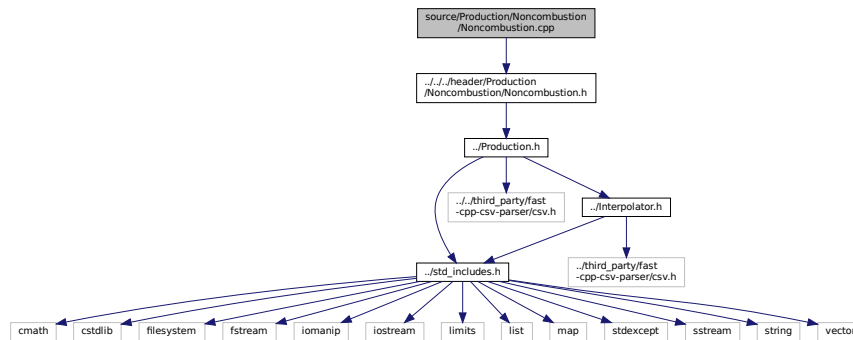

## 5.46 source/Production/Noncombustion/Noncombustion.cpp File Reference

Implementation file for the [Noncombustion](#) class.

```
#include "../../../header/Production/Noncombustion/Noncombustion.h"
```

Include dependency graph for Noncombustion.cpp:

### 5.46.1 Detailed Description

Implementation file for the [Noncombustion](#) class.

The root of the [Noncombustion](#) branch of the [Production](#) hierarchy. This branch contains derived classes which model controllable production which is not based on combustion.

## 5.47 source/Production/Production.cpp File Reference

Implementation file for the [Production](#) class.

```
#include "../../../header/Production/Production.h"
```

Include dependency graph for Production.cpp:

### 5.47.1 Detailed Description

Implementation file for the [Production](#) class.

The base class of the [Production](#) hierarchy. This hierarchy contains derived classes which model the production of energy, be it renewable or otherwise.

## 5.48 source/Production/Renewable/Renewable.cpp File Reference

Implementation file for the [Renewable](#) class.

```
#include "../.../header/Production/Renewable/Renewable.h"
```

Include dependency graph for Renewable.cpp:

### 5.48.1 Detailed Description

Implementation file for the [Renewable](#) class.

The root of the [Renewable](#) branch of the [Production](#) hierarchy. This branch contains derived classes which model the renewable production of energy.

## 5.49 source/Production/Renewable/Solar.cpp File Reference

Implementation file for the [Solar](#) class.

```
#include "../.../header/Production/Renewable/Solar.h"
```

Include dependency graph for Solar.cpp:

### 5.49.1 Detailed Description

Implementation file for the [Solar](#) class.

A derived class of the [Renewable](#) branch of [Production](#) which models solar production.

## 5.50 source/Production/Renewable/Tidal.cpp File Reference

Implementation file for the [Tidal](#) class.

```
#include "../../../../../header/Production/Renewable/Tidal.h"
```

Include dependency graph for Tidal.cpp:

### 5.50.1 Detailed Description

Implementation file for the [Tidal](#) class.

A derived class of the [Renewable](#) branch of [Production](#) which models tidal production.

## 5.51 source/Production/Renewable/Wave.cpp File Reference

Implementation file for the [Wave](#) class.

```
#include "../../../header/Production/Renewable/Wave.h"
```

Include dependency graph for Wave.cpp:

### 5.51.1 Detailed Description

Implementation file for the [Wave](#) class.

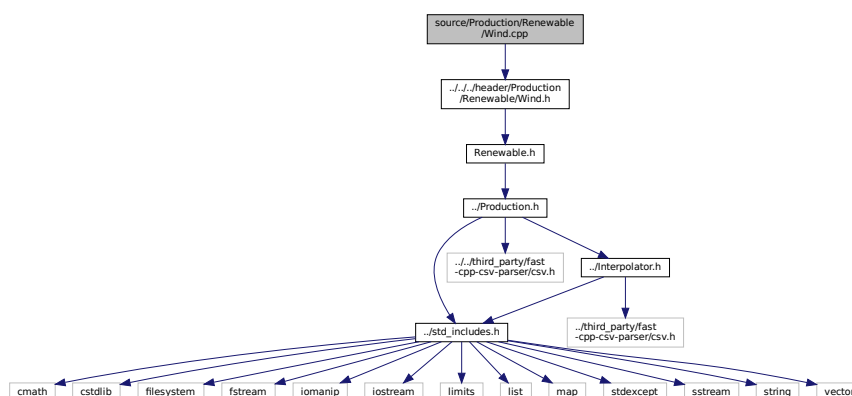

A derived class of the [Renewable](#) branch of [Production](#) which models wave production.

## 5.52 source/Production/Renewable/Wind.cpp File Reference

Implementation file for the [Wind](#) class.

```
#include "../../../header/Production/Renewable/Wind.h"
```

Include dependency graph for Wind.cpp:

### 5.52.1 Detailed Description

Implementation file for the [Wind](#) class.

A derived class of the [Renewable](#) branch of [Production](#) which models wind production.

## 5.53 source/Resources.cpp File Reference

Implementation file for the [Resources](#) class.

```
#include "../header/Resources.h"
```

Include dependency graph for Resources.cpp:

### 5.53.1 Detailed Description

Implementation file for the [Resources](#) class.

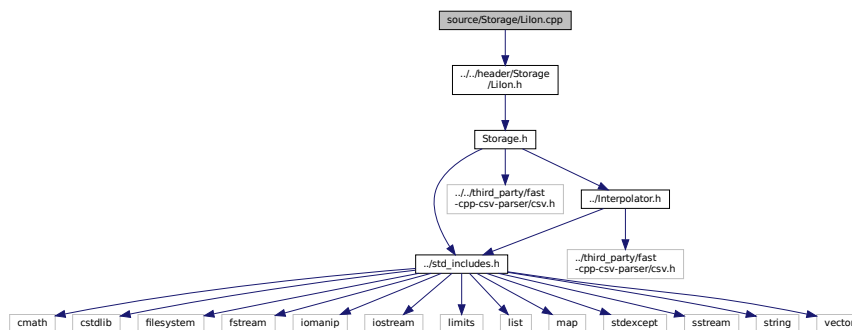

A class which contains renewable resource data. Intended to serve as a component class of [Model](#).

## 5.54 source/Storage/Lilon.cpp File Reference

Implementation file for the [Lilon](#) class.

```
#include "../..//header/Storage/LiIon.h"
```

Include dependency graph for Lilon.cpp:

### 5.54.1 Detailed Description

Implementation file for the [Lilon](#) class.

A derived class of [Storage](#) which models energy storage by way of lithium-ion batteries.

## 5.55 source/Storage/Storage.cpp File Reference

Implementation file for the [Storage](#) class.

```
#include "../..//header/Storage/Storage.h"
```

Include dependency graph for Storage.cpp:

### 5.55.1 Detailed Description

Implementation file for the [Storage](#) class.

The base class of the [Storage](#) hierarchy. This hierarchy contains derived classes which model the storage of energy.

## 5.56 test/source/Production/Combustion/test\_Combustion.cpp File Reference

Testing suite for [Combustion](#) class.

```
#include "../../../utils/testing_utils.h"
```

```
#include "../../../header/Production/Combustion/Combustion.h"
```

Include dependency graph for test\_Combustion.cpp:

## Functions

- [Combustion](#) \* [testConstruct\\_Combustion](#) (std::vector< double > \*time\_vec\_hrs\_ptr)  
A function to construct a [Combustion](#) object and spot check some post-construction attributes.
- int [main](#) (int argc, char \*\*argv)

### 5.56.1 Detailed Description

Testing suite for [Combustion](#) class.

A suite of tests for the [Combustion](#) class.

### 5.56.2 Function Documentation

#### 5.56.2.1 main()

```
int main (
    int argc,
    char ** argv )
147 {
148     #ifdef _WIN32
149         activateVirtualTerminal();
150     #endif /* _WIN32 */
151
152     printGold("\tTesting Production <-- Combustion");
153
154     srand(time(NULL));
155
156
157     std::vector<double> time_vec_hrs (8760, 0);
158     for (size_t i = 0; i < time_vec_hrs.size(); i++) {
159         time_vec_hrs[i] = i;
160     }
161
162     Combustion* test_combustion_ptr = testConstruct_Combustion(&time_vec_hrs);
163
164
165     try {
166         //...
167     }
168
169
170     catch (...) {
171         delete test_combustion_ptr;
172
173         printGold(" ..... ");
174         printRed("FAIL");
175         std::cout << std::endl;
176         throw;
177     }
178
179
180     delete test_combustion_ptr;
181
182     printGold(" ..... ");
183     printGreen("PASS");
184     std::cout << std::endl;
185     return 0;
186
187 } /* main() */
```

#### 5.56.2.2 testConstruct\_Combustion()

```
Combustion * testConstruct_Combustion (
    std::vector< double > * time_vec_hrs_ptr )
```

A function to construct a [Combustion](#) object and spot check some post-construction attributes.

## Parameters

<code>time_vec_hrs_ptr</code>	A pointer to the vector containing the modelling time series.
-------------------------------	---

## Returns

A pointer to a test [Combustion](#) object.

```

65 {
66     CombustionInputs combustion_inputs;
67
68     Combustion* test_combustion_ptr = new Combustion(
69         8760,
70         1,
71         combustion_inputs,
72         time_vec_hrs_ptr
73     );
74
75     testTruth(
76         not combustion_inputs.production_inputs.print_flag,
77         __FILE__,
78         __LINE__
79     );
80
81     testFloatEquals(
82         test_combustion_ptr->fuel_consumption_vec_L.size(),
83         8760,
84         __FILE__,
85         __LINE__
86     );
87
88     testFloatEquals(
89         test_combustion_ptr->fuel_cost_vec.size(),
90         8760,
91         __FILE__,
92         __LINE__
93     );
94
95     testFloatEquals(
96         test_combustion_ptr->CO2_emissions_vec_kg.size(),
97         8760,
98         __FILE__,
99         __LINE__
100    );
101
102    testFloatEquals(
103        test_combustion_ptr->CO_emissions_vec_kg.size(),
104        8760,
105        __FILE__,
106        __LINE__
107    );
108
109    testFloatEquals(
110        test_combustion_ptr->NOx_emissions_vec_kg.size(),
111        8760,
112        __FILE__,
113        __LINE__
114    );
115
116    testFloatEquals(
117        test_combustion_ptr->SOx_emissions_vec_kg.size(),
118        8760,
119        __FILE__,
120        __LINE__
121    );
122
123    testFloatEquals(
124        test_combustion_ptr->CH4_emissions_vec_kg.size(),
125        8760,
126        __FILE__,
127        __LINE__
128    );
129
130    testFloatEquals(
131        test_combustion_ptr->PM_emissions_vec_kg.size(),
132        8760,
133        __FILE__,
134        __LINE__
135    );
136
137    return test_combustion_ptr;
138 } /* testConstruct_Combustion() */

```

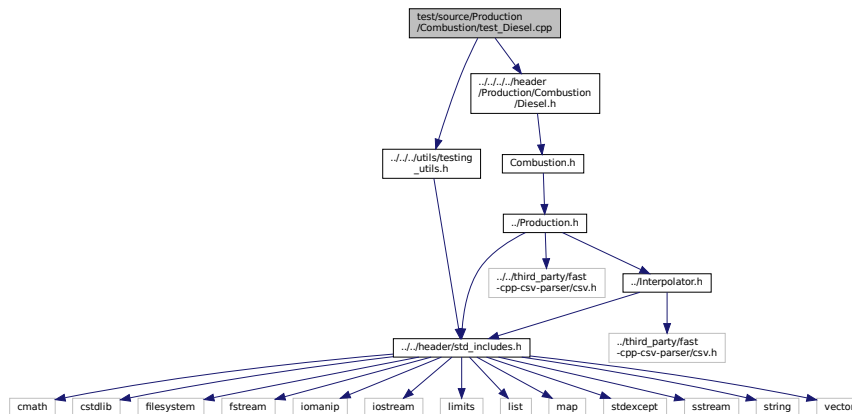

## 5.57 test/source/Production/Combustion/test\_Diesel.cpp File Reference

Testing suite for [Diesel](#) class.

```
#include "../../../../../utils/testing_utils.h"
#include "../../../../../header/Production/Combustion/Diesel.h"
```

Include dependency graph for test\_Diesel.cpp:

### Functions

- [Combustion](#) \* [testConstruct\\_Diesel](#) (std::vector< double > \*time\_vec\_hrs\_ptr)  
A function to construct a [Diesel](#) object and spot check some post-construction attributes.
- [Combustion](#) \* [testConstructLookup\\_Diesel](#) (std::vector< double > \*time\_vec\_hrs\_ptr)  
A function to construct a [Diesel](#) object using fuel consumption lookup.
- void [testBadConstruct\\_Diesel](#) (std::vector< double > \*time\_vec\_hrs\_ptr)  
Function to test the trying to construct a [Diesel](#) object given bad inputs is being handled as expected.
- void [testCapacityConstraint\\_Diesel](#) ([Combustion](#) \*test\_diesel\_ptr)  
Test to check that the installed capacity constraint is active and behaving as expected.
- void [testMinimumLoadRatioConstraint\\_Diesel](#) ([Combustion](#) \*test\_diesel\_ptr)  
Test to check that the minimum load ratio constraint is active and behaving as expected.
- void [testCommit\\_Diesel](#) ([Combustion](#) \*test\_diesel\_ptr)  
Function to test if the commit method is working as expected, by checking some post-call attributes of the test [Diesel](#) object.
- void [testMinimumRuntimeConstraint\\_Diesel](#) ([Combustion](#) \*test\_diesel\_ptr)  
Function to check that the minimum runtime constraint is active and behaving as expected.
- void [testFuelConsumptionEmissions\\_Diesel](#) ([Combustion](#) \*test\_diesel\_ptr)  
Function to test that post-commit fuel consumption and emissions are > 0 when the test [Diesel](#) object is running, and = 0 when it is not (as expected).
- void [testEconomics\\_Diesel](#) ([Combustion](#) \*test\_diesel\_ptr)  
Function to test that the post-commit model economics for the test [Diesel](#) object are as expected (> 0 when running, = 0 when not).
- void [testFuelLookup\\_Diesel](#) ([Combustion](#) \*test\_diesel\_lookup\_ptr)  
Function to test that fuel consumption lookup (i.e., interpolation) is returning the expected values.
- int [main](#) (int argc, char \*\*argv)

### 5.57.1 Detailed Description

Testing suite for [Diesel](#) class.

A suite of tests for the [Diesel](#) class.

### 5.57.2 Function Documentation

#### 5.57.2.1 main()

```

int main (
    int argc,
    char ** argv )
723 {
724     #ifdef _WIN32
725         activateVirtualTerminal();
726     #endif /* _WIN32 */
727
728     printGold("\tTesting Production <-- Combustion <-- Diesel");

775     std::cout << std::endl;
776     return 0;
777
778 } /* main() */

```

### 5.57.2.2 testBadConstruct\_Diesel()

```
void testBadConstruct_Diesel (
    std::vector< double > * time_vec_hrs_ptr )
```

Function to test the trying to construct a [Diesel](#) object given bad inputs is being handled as expected.

#### Parameters

<i>time_vec_hrs_ptr</i>	A pointer to the vector containing the modelling time series.
-------------------------	---

```
196 {
197     bool error_flag = true;
198
199     try {
200         DieselInputs bad_diesel_inputs;
201         bad_diesel_inputs.fuel_cost_L = -1;
202
203         Diesel bad_diesel(
204             8760,
205             1,
206             bad_diesel_inputs,
207             time_vec_hrs_ptr
208         );
209
210         error_flag = false;
211     } catch (...) {
212         // Task failed successfully! =P
213     }
214     if (not error_flag) {
215         expectedErrorNotDetected(__FILE__, __LINE__);
216     }
217
218     return;
219 } /* testBadConstruct_Diesel() */
```

### 5.57.2.3 testCapacityConstraint\_Diesel()

```
void testCapacityConstraint_Diesel (
    Combustion * test_diesel_ptr )
```

Test to check that the installed capacity constraint is active and behaving as expected.

#### Parameters

<i>test_diesel_ptr</i>	A <a href="#">Combustion</a> pointer to the test <a href="#">Diesel</a> object.
------------------------	---

```
237 {
238     testFloatEquals(
239         test_diesel_ptr->requestProductionkW(0, 1, 2 * test_diesel_ptr->capacity_kW),
240         test_diesel_ptr->capacity_kW,
241         __FILE__,
242         __LINE__
243     );
244
245     return;
246 } /* testCapacityConstraint_Diesel() */
```

### 5.57.2.4 testCommit\_Diesel()

```
void testCommit_Diesel (
    Combustion * test_diesel_ptr )
```

Function to test if the commit method is working as expected, by checking some post-call attributes of the test [Diesel](#) object.

#### Parameters

<code>test_diesel_ptr</code>	A <a href="#">Combustion</a> pointer to the test <a href="#">Diesel</a> object.
------------------------------	---

```

296 {
297     std::vector<double> dt_vec_hrs (48, 1);
298
299     std::vector<double> load_vec_kW = {

### 5.57.2.5 testConstruct\_Diesel()

```

Combustion * testConstruct_Diesel (
    std::vector< double > * time_vec_hrs_ptr )

```

A function to construct a [Diesel](#) object and spot check some post-construction attributes.

#### Parameters

<i>time_vec_hrs_ptr</i>	A pointer to the vector containing the modelling time series.
-------------------------	---

#### Returns

A [Combustion](#) pointer to a test [Diesel](#) object.

```

65 {
66     DieselInputs diesel_inputs;
67
68     Combustion* test_diesel_ptr = new Diesel(
69         8760,

#### 5.57.2.6 testConstructLookup\_Diesel()

```

Combustion * testConstructLookup_Diesel (
    std::vector< double > * time_vec_hrs_ptr )

```

A function to construct a [Diesel](#) object using fuel consumption lookup.

##### Parameters

<i>time_vec_hrs_ptr</i>	A pointer to the vector containing the modelling time series.
-------------------------	---

##### Returns

A [Combustion](#) pointer to a test [Diesel](#) object.

```

163 {
164     DieselInputs diesel_inputs;
165
166     diesel_inputs.combustion_inputs.fuel_mode = FuelMode :: FUEL_MODE_LOOKUP;

168         "data/test/interpolation/diesel_fuel_curve.csv";
169
170     Combustion* test_diesel_lookup_ptr = new Diesel(
171         8760,
172         1,
173         diesel_inputs,
174         time_vec_hrs_ptr
175     );
176
177     return test_diesel_lookup_ptr;
178 } /* testConstructLookup_Diesel() */

```

## 5.57.2.7 testEconomics\_Diesel()

```
void testEconomics_Diesel (
    Combustion * test_diesel_ptr )
```

Function to test that the post-commit model economics for the test Diesel object are as expected ( $> 0$  when running,  $= 0$  when not).

## Parameters

<code>test_diesel_ptr</code>	A Combustion pointer to the test Diesel object.
------------------------------	---

```
600 {
601     std::vector<bool> expected_is_running_vec = {
602         1, 1, 1, 1, 0, 0, 1, 1, 1, 1, 1, 1,

### 5.57.2.11 testMinimumRuntimeConstraint\_Diesel()

```
void testMinimumRuntimeConstraint_Diesel (
    Combustion * test_diesel_ptr )
```

Function to check that the minimum runtime constraint is active and behaving as expected.

#### Parameters

<code>test_diesel_ptr</code>	A <a href="#">Combustion</a> pointer to the test <a href="#">Diesel</a> object.
------------------------------	---

```
398 {
399     std::vector<double> load_vec_kW = {
400         1, 1, 0, 1, 0, 0, 1, 1, 1, 0, 1, 1,
401         1, 1, 1, 0, 0, 0, 0, 0, 0, 1, 1, 0,
402         1, 1, 1, 1, 1, 0, 1, 1, 1, 1, 0, 1,
403         1, 0, 0, 0, 0, 1, 1, 1, 0, 1, 1, 0, 0
404     };
405
406     std::vector<bool> expected_is_running_vec = {
407         1, 1, 1, 1, 0, 0, 1, 1, 1, 1, 1, 1,
408         1, 1, 1, 0, 0, 0, 0, 0, 0, 1, 1, 1,
409         1, 1, 1, 1, 1, 0, 1, 1, 1, 1, 0, 1,
410         1, 1, 1, 0, 1, 1, 1, 1, 1, 1, 0, 0
411     };
412
413     for (int i = 0; i < 48; i++) {
414         testFloatEquals(
415             test_diesel_ptr->is_running_vec[i],

135     std::cout << std::endl;
136     return 0;
137
138 } /* main() */

```

### 5.60.2.2 testConstruct\_Renewable()

```

Renewable * testConstruct_Renewable (
    std::vector< double > * time_vec_hrs_ptr )

```

A function to construct a [Renewable](#) object and spot check some post-construction attributes.

#### Parameters

<i>time_vec_hrs_ptr</i>	A pointer to the vector containing the modelling time series.
-------------------------	---

## Returns

A pointer to a test [Renewable](#) object.

```

65 {
66     RenewableInputs renewable_inputs;
67
68     Renewable* test_renewable_ptr = new Renewable(
69         8760,
70         1,
71         renewable_inputs,
72         time_vec_hrs_ptr
73     );
74
75     testTruth(
76         not renewable_inputs.production_inputs.print_flag,
77         __FILE__,
78         __LINE__
79     );
80
81     testFloatEquals(
82         test_renewable_ptr->n_points,
83         8760,
84         __FILE__,
85         __LINE__
86     );
87
88     return test_renewable_ptr;
89 } /* testConstruct_Renewable() */

```

516     return 0;
517
518 } /* main() */

```

### 5.61.2.2 testBadConstruct\_Solar()

```

void testBadConstruct_Solar (
    std::vector< double > * time_vec_hrs_ptr )

```

Function to test the trying to construct a [Solar](#) object given bad inputs is being handled as expected.

#### Parameters

<i>time_vec_hrs_ptr</i>	A pointer to the vector containing the modelling time series.
-------------------------	---

```

134 {
135     bool error_flag = true;
136
137     try {

452         }
453     }
454
455     return;
456 } /* testEconomics_Solar() */

```

### 5.61.2.6 testProductionConstraint\_Solar()

```

void testProductionConstraint_Solar (
    Renewable * test_solar_ptr )

```

Function to test that the production constraint is active and behaving as expected.

#### Parameters

<i>test_solar_ptr</i>	A <a href="#">Renewable</a> pointer to the test <a href="#">Solar</a> object.
-----------------------	---

```

279 {
280     testFloatEquals(
281         test_solar_ptr->computeProductionkW(0, 1, 2),

283         __FILE__,
284         __LINE__
285     );
286
287     testFloatEquals(
288         test_solar_ptr->computeProductionkW(0, 1, -1),
289         0,
290         __FILE__,
291         __LINE__
292     );
293
294     return;
295 } /* testProductionConstraint_Solar() */

```

## 5.61.2.7 testProductionOverride\_Solar()

```
void testProductionOverride_Solar (
    std::string path_2_normalized_production_time_series,
    std::vector< double > * time_vec_hrs_ptr )
```

Function to test that normalized production data is being read in correctly, and that the associated production override feature is behaving as expected.

## Parameters

<i>path_2_normalized_production_time_series</i>	A path (either relative or absolute) to the given normalized production time series data.
<i>time_vec_hrs_ptr</i>	A pointer to the vector containing the modelling time series.

```
179 {
180     SolarInputs solar_inputs;
181
182     solar_inputs.renewable_inputs.production_inputs.path_2_normalized_production_time_series =
183         path_2_normalized_production_time_series;
184
185     Solar test_solar_override(
186         time_vec_hrs_ptr->size(),
187         1,
188         solar_inputs,
189         time_vec_hrs_ptr
190     );

## 5.62.1 Detailed Description

Testing suite for [Tidal](#) class.

A suite of tests for the [Tidal](#) class.

## 5.62.2 Function Documentation

### 5.62.2.1 main()

```
int main (
    int argc,
    char ** argv )
352 {
353     #ifdef _WIN32
354         activateVirtualTerminal();
355     #endif /* _WIN32 */
356
357     printGold("\tTesting Production <-- Renewable <-- Tidal");
358
359     srand(time(NULL));
360
361
362     std::vector<double> time_vec_hrs (8760, 0);
363     for (size_t i = 0; i < time_vec_hrs.size(); i++) {
364         time_vec_hrs[i] = i;
365     }
366
367     Renewable* test_tidal_ptr = testConstruct_Tidal(&time_vec_hrs);
368
369
370     try {
371         testBadConstruct_Tidal(&time_vec_hrs);
372
373         testProductionConstraint_Tidal(test_tidal_ptr);
374
375         testCommit_Tidal(test_tidal_ptr);
376         testEconomics_Tidal(test_tidal_ptr);
377     }
378
379
380     catch (...) {
381         delete test_tidal_ptr;
382
383         printGold(" ..... ");
384         printRed("FAIL");
385         std::cout << std::endl;
386         throw;
387     }
388
389
390     delete test_tidal_ptr;
391
392     printGold(" ..... ");
393     printGreen("PASS");
394     std::cout << std::endl;
395     return 0;
396
397 } /* main() */
```

### 5.62.2.2 testBadConstruct\_Tidal()

```
void testBadConstruct_Tidal (
    std::vector< double > * time_vec_hrs_ptr )
```

Function to test the trying to construct a [Tidal](#) object given bad inputs is being handled as expected.

## Parameters

<i>time_vec_hrs_ptr</i>	A pointer to the vector containing the modelling time series.
-------------------------	---

```

129 {
130     bool error_flag = true;
131
132     try {
133         TidalInputs bad_tidal_inputs;
134         bad_tidal_inputs.design_speed_ms = -1;
135
136         Tidal bad_tidal(8760, 1, bad_tidal_inputs, time_vec_hrs_ptr);
137
138         error_flag = false;
139     } catch (...) {
140         // Task failed successfully! =P
141     }
142     if (not error_flag) {
143         expectedErrorNotDetected(__FILE__, __LINE__);
144     }
145
146     return;
147 } /* testBadConstruct_Tidal() */

```

## 5.62.2.3 testCommit\_Tidal()

```

void testCommit_Tidal (
    Renewable * test_tidal_ptr )

```

Function to test if the commit method is working as expected, by checking some post-call attributes of the test [Tidal](#) object. Uses a randomized resource input.

## Parameters

<i>test_tidal_ptr</i>	A <a href="#">Renewable</a> pointer to the test <a href="#">Tidal</a> object.
-----------------------	---

```

211 {
212     std::vector<double> dt_vec_hrs (48, 1);

176 } /* testBadConstruct_Wave() */

```

### 5.63.2.3 testCommit\_Wave()

```

void testCommit_Wave (
    Renewable * test_wave_ptr )

```

Function to test if the commit method is working as expected, by checking some post-call attributes of the test [Wave](#) object. Uses a randomized resource input.

## Parameters

<code>test_wave_ptr</code>	A <a href="#">Renewable</a> pointer to the test <a href="#">Wave</a> object.
----------------------------	--

```

229 {
230     std::vector<double> dt_vec_hrs (48, 1);

#### 5.63.2.4 testConstruct\_Wave()

```

Renewable * testConstruct_Wave (
    std::vector< double > * time_vec_hrs_ptr )

```

A function to construct a [Wave](#) object and spot check some post-construction attributes.

##### Parameters

<i>time_vec_hrs_ptr</i>	A pointer to the vector containing the modelling time series.
-------------------------	---

##### Returns

A [Renewable](#) pointer to a test [Wave](#) object.

```

65 {
66     WaveInputs wave_inputs;
67
68     Renewable* test_wave_ptr = new Wave(8760, 1, wave_inputs, time_vec_hrs_ptr);

```

```

107     __LINE__
108 );
109
110 return test_wave_ptr;
111 } /* testConstruct_Wave() */

```

### 5.63.2.5 testConstructLookup\_Wave()

```

Renewable * testConstructLookup_Wave (
    std::vector< double > * time_vec_hrs_ptr )

```

A function to construct a [Wave](#) object using production lookup.

#### Parameters

<i>time_vec_hrs_ptr</i>	A pointer to the vector containing the modelling time series.
-------------------------	---

#### Returns

A [Renewable](#) pointer to a test [Wave](#) object.

```

130 {
131     WaveInputs wave_inputs;
132
133     wave_inputs.power_model = WavePowerProductionModel :: WAVE_POWER_LOOKUP;
134     wave_inputs.path_2_normalized_performance_matrix =
135         "data/test/interpolation/wave_energy_converter_normalized_performance_matrix.csv";
136
137     Renewable* test_wave_lookup_ptr = new Wave(8760, 1, wave_inputs, time_vec_hrs_ptr);
138
139     return test_wave_lookup_ptr;
140 } /* testConstructLookup_Wave() */

```

### 5.63.2.6 testEconomics\_Wave()

```

void testEconomics_Wave (
    Renewable * test_wave_ptr )
{
    342 {
    343     for (int i = 0; i < 48; i++) {
    344         // resource, O&M > 0 whenever wave is running (i.e., producing)
    345         if (test_wave_ptr->is_running_vec[i]) {
    346             testGreaterThan(
    347                 test_wave_ptr->operation_maintenance_cost_vec[i],
    348                 0,
    349                 __FILE__,
    350                 __LINE__
    351             );
    352         }
    353
    354         // resource, O&M = 0 whenever wave is not running (i.e., not producing)
    355         else {
    356             testFloatEquals(
    357                 test_wave_ptr->operation_maintenance_cost_vec[i],
    358                 0,
    359                 __FILE__,
    360                 __LINE__
    361             );
    362         }
    363     }
    364
    365     return;
    366 } /* testEconomics_Wave() */

```

### 5.63.2.7 testProductionConstraint\_Wave()

```
void testProductionConstraint_Wave (
    Renewable * test_wave_ptr )
```

Function to test that the production constraint is active and behaving as expected.

#### Parameters

<i>test_wave_ptr</i>	A <a href="#">Renewable</a> pointer to the test <a href="#">Wave</a> object.
----------------------	--

```
194 {
195     testFloatEquals(
196         test_wave_ptr->computeProductionkW(0, 1, 0, rand()),
197         0,
198         __FILE__,
199         __LINE__
200     );
201
202     testFloatEquals(
203         test_wave_ptr->computeProductionkW(0, 1, rand(), 0),
204         0,
205         __FILE__,
206         __LINE__
207     );
208
209     return;
210 } /* testProductionConstraint_Wave() */
```

### 5.63.2.8 testProductionLookup\_Wave()

```
void testProductionLookup_Wave (
    Renewable * test_wave_lookup_ptr )
```

Function to test that production lookup (i.e., interpolation) is returning the expected values.

#### Parameters

<i>test_wave_lookup_ptr</i>	A <a href="#">Renewable</a> pointer to the test <a href="#">Wave</a> object using production lookup.
-----------------------------	--

```
385 {

## 5.64 test/source/Production/Renewable/test\_Wind.cpp File Reference

Testing suite for [Wind](#) class.

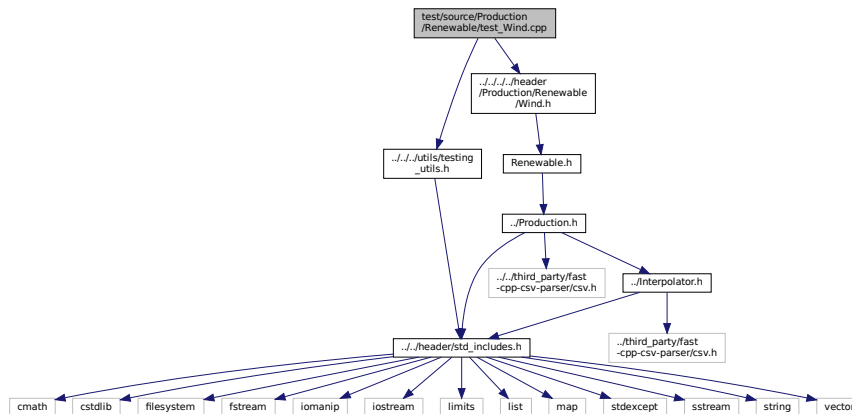

```

#include ".../.../utils/testing_utils.h"
#include ".../.../header/Production/Renewable/Wind.h"

```

Include dependency graph for test\_Wind.cpp:

## Functions

- `Renewable * testConstruct_Wind (std::vector< double > *time_vec_hrs_ptr)`  
A function to construct a [Wind](#) object and spot check some post-construction attributes.
- `void testBadConstruct_Wind (std::vector< double > *time_vec_hrs_ptr)`  
Function to test the trying to construct a [Wind](#) object given bad inputs is being handled as expected.
- `void testProductionConstraint_Wind (Renewable *test_wind_ptr)`  
Function to test that the production constraint is active and behaving as expected.
- `void testCommit_Wind (Renewable *test_wind_ptr)`  
Function to test if the commit method is working as expected, by checking some post-call attributes of the test [Wind](#) object. Uses a randomized resource input.
- `void testEconomics_Wind (Renewable *test_wind_ptr)`
- `int main (int argc, char **argv)`

### 5.64.1 Detailed Description

Testing suite for [Wind](#) class.

A suite of tests for the [Wind](#) class.

### 5.64.2 Function Documentation

### 5.64.2.1 main()

```

int main (
    int argc,
    char ** argv )
352 {
353     #ifdef _WIN32
354         activateVirtualTerminal();
355     #endif /* _WIN32 */
356
357     printGold("\tTesting Production <-- Renewable <-- Wind");
358
359     srand(time(NULL));
360
361
362     std::vector<double> time_vec_hrs (8760, 0);
363     for (size_t i = 0; i < time_vec_hrs.size(); i++) {
364         time_vec_hrs[i] = i;
365     }
366
367     Renewable* test_wind_ptr = testConstruct_Wind(&time_vec_hrs);
368
369     try {
370         testBadConstruct_Wind(&time_vec_hrs);
371
372         testProductionConstraint_Wind(test_wind_ptr);
373
374         testCommit_Wind(test_wind_ptr);
375         testEconomics_Wind(test_wind_ptr);
376     }
377
378     catch (...) {
379         delete test_wind_ptr;
380
381         printGold(" ..... ");
382         printRed("FAIL");
383         std::cout << std::endl;
384         throw;
385     }
386
387     delete test_wind_ptr;
388
389     printGold(" ..... ");
390     printGreen("PASS");
391     std::cout << std::endl;
392     return 0;
393 } /* main() */

```

### 5.64.2.2 testBadConstruct\_Wind()

```

void testBadConstruct_Wind (
    std::vector< double > * time_vec_hrs_ptr )

```

Function to test the trying to construct a [Wind](#) object given bad inputs is being handled as expected.

#### Parameters

<i>time_vec_hrs_ptr</i>	A pointer to the vector containing the modelling time series.
-------------------------	---

```

129 {
130     bool error_flag = true;
131
132     try {
133         WindInputs bad_wind_inputs;
134         bad_wind_inputs.design_speed_ms = -1;
135
136         Wind bad_wind(8760, 1, bad_wind_inputs, time_vec_hrs_ptr);
137     }

```

```

138         error_flag = false;
139     } catch (...) {
140         // Task failed successfully! =P
141     }
142     if (not error_flag) {
143         expectedErrorNotDetected(__FILE__, __LINE__);
144     }
145
146     return;
147 } /* testBadConstruct_Wind() */

```

### 5.64.2.3 testCommit\_Wind()

```

void testCommit_Wind (
    Renewable * test_wind_ptr )

```

Function to test if the commit method is working as expected, by checking some post-call attributes of the test [Wind](#) object. Uses a randomized resource input.

#### Parameters

<i>test_wind_ptr</i>	A <a href="#">Renewable</a> pointer to the test <a href="#">Wind</a> object.
----------------------	--

```

211 {
212     std::vector<double> dt_vec_hrs (48, 1);
213

#### 5.64.2.4 testConstruct\_Wind()

```

Renewable * testConstruct_Wind (
    std::vector< double > * time_vec_hrs_ptr )

```

A function to construct a [Wind](#) object and spot check some post-construction attributes.

##### Parameters

<i>time_vec_hrs_ptr</i>	A pointer to the vector containing the modelling time series.
-------------------------	---

##### Returns

A [Renewable](#) pointer to a test [Wind](#) object.

```

65 {
66     WindInputs wind_inputs;
67
68     Renewable* test_wind_ptr = new Wind(8760, 1, wind_inputs, time_vec_hrs_ptr);

339         }
340     }
341
342     return;
343 } /* testEconomics_Wind() */

```

#### 5.64.2.6 testProductionConstraint\_Wind()

```

void testProductionConstraint_Wind (
    Renewable * test_wind_ptr )

```

Function to test that the production constraint is active and behaving as expected.

## Parameters

<code>test_wind_ptr</code>	A <a href="#">Renewable</a> pointer to the test <a href="#">Wind</a> object.
----------------------------	--

```

165 {
166     testFloatEquals(

A function to test commitDischarge() and ensure that its impact on acceptable and available power is as expected.
- int [main](#) (int argc, char \*\*argv)

### 5.66.1 Detailed Description

Testing suite for [LiIon](#) class.

A suite of tests for the [LiIon](#) class.

### 5.66.2 Function Documentation

#### 5.66.2.1 main()

```

int main (
    int argc,
    char ** argv )
331 {
332     #ifdef _WIN32
333         activateVirtualTerminal();
334     #endif /* _WIN32 */
335
336     printGold("\tTesting Storage <-- LiIon");
337
338     srand(time(NULL));
339

```

```

340
341     Storage* test_liion_ptr = testConstruct_LiIon();
342
343
344     try {
345         testBadConstruct_LiIon();
346
347         testCommitCharge_LiIon(test_liion_ptr);
348         testCommitDischarge_LiIon(test_liion_ptr);
349     }
350
351
352     catch (...) {
353         delete test_liion_ptr;
354
355         printGold(" ..... ");
356         printRed("FAIL");
357         std::cout << std::endl;
358         throw;
359     }
360
361
362     delete test_liion_ptr;
363
364     printGold(" ..... ");
365     printGreen("PASS");
366     std::cout << std::endl;
367     return 0;
368
369 } /* main() */

```

### 5.66.2.2 testBadConstruct\_LiIon()

```

void testBadConstruct_LiIon (
    void )

```

Function to test the trying to construct a [LiIon](#) object given bad inputs is being handled as expected.

```

174 {
175     bool error_flag = true;
176
177     try {
178         LiIonInputs bad_liion_inputs;
179         bad_liion_inputs.min_SOC = -1;
180
181         LiIon bad_liion(8760, 1, bad_liion_inputs);
182
183         error_flag = false;
184     } catch (...) {
185         // Task failed successfully! =P
186     }
187     if (not error_flag) {
188         expectedErrorNotDetected(__FILE__, __LINE__);
189     }
190
191     return;
192 } /* testBadConstruct_LiIon() */

```

### 5.66.2.3 testCommitCharge\_LiIon()

```

void testCommitCharge_LiIon (
    Storage * test_liion_ptr )

```

A function to test `commitCharge()` and ensure that its impact on acceptable and available power is as expected.

#### Parameters

<code>test_liion_ptr</code>	A <a href="#">Storage</a> pointer to a test <a href="#">LiIon</a> object.
-----------------------------	---

```

210 {
211     double dt_hrs = 1;
212
213     testFloatEquals(
214         test_liion_ptr->getAvailablekW(dt_hrs),
215         100, // hits power capacity constraint
216         __FILE__,
217         __LINE__
218     );
219
220     testFloatEquals(
221         test_liion_ptr->getAcceptablekW(dt_hrs),
222         100, // hits power capacity constraint
223         __FILE__,
224         __LINE__
225     );
226
227     test_liion_ptr->power_kW = 1e6; // as if a massive amount of power is already flowing in
228
229     testFloatEquals(
230         test_liion_ptr->getAvailablekW(dt_hrs),
231         0, // is already hitting power capacity constraint
232         __FILE__,
233         __LINE__
234     );
235
236     testFloatEquals(
237         test_liion_ptr->getAcceptablekW(dt_hrs),
238         0, // is already hitting power capacity constraint
239         __FILE__,
240         __LINE__
241     );
242
243     test_liion_ptr->commitCharge(0, dt_hrs, 100);
244
245     testFloatEquals(
246         test_liion_ptr->power_kW,
247         0,
248         __FILE__,
249         __LINE__
250     );
251
252     return;
253 } /* testCommitCharge_LiIon() */

```

#### 5.66.2.4 testCommitDischarge\_LiIon()

```

void testCommitDischarge_LiIon (
    Storage * test_liion_ptr )

```

A function to test commitDischarge() and ensure that its impact on acceptable and available power is as expected.

##### Parameters

<i>test_liion_ptr</i>	A <a href="#">Storage</a> pointer to a test <a href="#">LiIon</a> object.
-----------------------	---

```

271 {
272     double dt_hrs = 1;
273     double load_kW = 100;
274
275     testFloatEquals(
276         test_liion_ptr->getAvailablekW(dt_hrs),
277         100, // hits power capacity constraint
278         __FILE__,
279         __LINE__
280     );
281
282     testFloatEquals(
283         test_liion_ptr->getAcceptablekW(dt_hrs),
284         100, // hits power capacity constraint
285         __FILE__,
286         __LINE__
287     );
288
289     test_liion_ptr->power_kW = 1e6; // as if a massive amount of power is already flowing out

```

```

290
291     testFloatEquals(
292         test_liion_ptr->getAvailablekW(dt_hrs),
293         0, // is already hitting power capacity constraint
294         __FILE__,
295         __LINE__
296     );
297
298     testFloatEquals(
299         test_liion_ptr->getAcceptablekW(dt_hrs),
300         0, // is already hitting power capacity constraint
301         __FILE__,
302         __LINE__
303     );
304
305     load_kW = test_liion_ptr->commitDischarge(0, dt_hrs, 100, load_kW);
306
307     testFloatEquals(
308         load_kW,
309         0,
310         __FILE__,
311         __LINE__
312     );
313
314     testFloatEquals(
315         test_liion_ptr->power_kW,
316         0,
317         __FILE__,
318         __LINE__
319     );
320
321     return;
322 } /* testCommitDischarge_LiIon() */

```

### 5.66.2.5 testConstruct\_LiIon()

```

Storage * testConstruct_LiIon (
    void )

```

A function to construct a [LiIon](#) object and spot check some post-construction attributes.

#### Returns

A [Storage](#) pointer to a test [LiIon](#) object.

```

63 {
64     LiIonInputs liion_inputs;
65
66     Storage* test_liion_ptr = new LiIon(8760, 1, liion_inputs);
67
68     testTruth(
69         test_liion_ptr->type_str == "LIION",
70         __FILE__,
71         __LINE__
72     );
73
74     testFloatEquals(
75         ((LiIon*)test_liion_ptr)->init_SOC,
76         0.5,
77         __FILE__,
78         __LINE__
79     );
80
81     testFloatEquals(
82         ((LiIon*)test_liion_ptr)->min_SOC,
83         0.15,
84         __FILE__,
85         __LINE__
86     );
87
88     testFloatEquals(

Include dependency graph for test_Interpolator.cpp:
```

### Functions

- [Interpolator](#) \* [testConstruct\\_Interpolator](#) (void)  
A function to construct an [Interpolator](#) object.
- void [testDataRead1D\\_Interpolator](#) ([Interpolator](#) \*test\_interpolator\_ptr, int data\_key\_1D, std::string path\_2↵\_data\_1D)  
A function to check the 1D data values read into the [Interpolator](#) object.
- void [testBadIndexing1D\\_Interpolator](#) ([Interpolator](#) \*test\_interpolator\_ptr, int data\_key\_bad)  
A function to check if bad key errors are being handled properly.
- void [testInvalidInterpolation1D\\_Interpolator](#) ([Interpolator](#) \*test\_interpolator\_ptr, int data\_key\_1D)  
Function to check if attempting to interpolate outside the given 1D data domain is handled properly.
- void [testInterpolation1D\\_Interpolator](#) ([Interpolator](#) \*test\_interpolator\_ptr, int data\_key\_1D)  
Function to check that the [Interpolator](#) object is returning the expected 1D interpolation values.
- void [testDataRead2D\\_Interpolator](#) ([Interpolator](#) \*test\_interpolator\_ptr, int data\_key\_2D, std::string path\_2↵\_data\_2D)  
A function to check the 2D data values read into the [Interpolator](#) object.
- void [testInvalidInterpolation2D\\_Interpolator](#) ([Interpolator](#) \*test\_interpolator\_ptr, int data\_key\_2D)  
Function to check if attempting to interpolate outside the given 2D data domain is handled properly.
- void [testInterpolation2D\\_Interpolator](#) ([Interpolator](#) \*test\_interpolator\_ptr, int data\_key\_2D)  
Function to check that the [Interpolator](#) object is returning the expected 2D interpolation values.
- int [main](#) (int argc, char \*\*argv)

#### 5.70.1 Detailed Description

Testing suite for [Interpolator](#) class.

A suite of tests for the [Interpolator](#) class.

#### 5.70.2 Function Documentation

### 5.70.2.1 main()

```

int main (
    int argc,
    char ** argv )
725 {

773     std::cout << std::endl;
774     return 0;
775 } /* main() */

```

### 5.70.2.2 testBadIndexing1D\_Interpolator()

```

void testBadIndexing1D_Interpolator (
    Interpolator * test_interpolator_ptr,
    int data_key_bad )

```

A function to check if bad key errors are being handled properly.

#### Parameters

<i>test_interpolator_ptr</i>	A pointer to the test <a href="#">Interpolator</a> object.
<i>data_key_bad</i>	A key used to index into the <a href="#">Interpolator</a> object.

```

212 {

```

```

213     bool error_flag = true;
214
215     try {
216         test_interpolator_ptr->interp1D(data_key_bad, 0);
217         error_flag = false;
218     } catch (...) {
219         // Task failed successfully! =P
220     }
221     if (not error_flag) {
222         expectedErrorNotDetected(__FILE__, __LINE__);
223     }
224
225     return;
226 } /* testBadIndexing1D_Interpolator() */

```

### 5.70.2.3 testConstruct\_Interpolator()

```

Interpolator * testConstruct_Interpolator (
    void )

```

A function to construct an [Interpolator](#) object.

#### Returns

A pointer to a test [Interpolator](#) object.

```

62 {
63     Interpolator* test_interpolator_ptr = new Interpolator();
64
65     return test_interpolator_ptr;
66 } /* testConstruct_Interpolator() */

```

### 5.70.2.4 testDataRead1D\_Interpolator()

```

void testDataRead1D_Interpolator (
    Interpolator * test_interpolator_ptr,
    int data_key,
    std::string path_2_data_1D )

```

A function to check the 1D data values read into the [Interpolator](#) object.

#### Parameters

<i>test_interpolator_ptr</i>	A pointer to the test <a href="#">Interpolator</a> object.
<i>data_key_1D</i>	A key used to index into the <a href="#">Interpolator</a> object.
<i>path_2_data_1D</i>	A path (either relative or absolute) to the interpolation data.

```

95 {
96     test_interpolator_ptr->addData1D(data_key_1D, path_2_data_1D);
97

### 5.70.2.6 testInterpolation1D\_Interpolator()

```

void testInterpolation1D_Interpolator (
    Interpolator * test_interpolator_ptr,
    int data_key_1D )

```

Function to check that the [Interpolator](#) object is returning the expected 1D interpolation values.

#### Parameters

<i>test_interpolator_ptr</i>	A pointer to the test <a href="#">Interpolator</a> object.
<i>data_key_1D</i>	A key used to index into the <a href="#">Interpolator</a> object.

```

322 {

### 5.70.2.8 testInvalidInterpolation1D\_Interpolator()

```

void testInvalidInterpolation1D_Interpolator (
    Interpolator * test_interpolator_ptr,
    int data_key_1D )

```

Function to check if attempting to interpolate outside the given 1D data domain is handled properly.

#### Parameters

<i>test_interpolator_ptr</i>	A pointer to the test <a href="#">Interpolator</a> object.
<i>data_key_1D</i>	A key used to index into the <a href="#">Interpolator</a> object.

```

252 {
253     bool error_flag = true;
254
255     try {
256         test_interpolator_ptr->interp1D(data_key_1D, -1);
257         error_flag = false;
258     } catch (...) {

```

### 5.70.2.9 testInvalidInterpolation2D\_Interpolator()

```

void testInvalidInterpolation2D_Interpolator (
    Interpolator * test_interpolator_ptr,
    int data_key_2D )

```

Function to check if attempting to interpolate outside the given 2D data domain is handled properly.

#### Parameters

<i>test_interpolator_ptr</i>	A pointer to the test <a href="#">Interpolator</a> object.
<i>data_key_2D</i>	A key used to index into the <a href="#">Interpolator</a> object.

```

579 {

## 5.71 test/source/test\_Model.cpp File Reference

Testing suite for [Model](#) class.

```
#include "../utils/testing_utils.h"
```

```
#include "../header/Model.h"
```

Include dependency graph for test\_Model.cpp:

## Functions

- [Model](#) \* [testConstruct\\_Model](#) ([ModelInputs](#) test\_model\_inputs)
- void [testBadConstruct\\_Model](#) (void)  
Function to check if passing bad [ModelInputs](#) to the [Model](#) constructor is handled appropriately.
- void [testPostConstructionAttributes\\_Model](#) ([Model](#) \*test\_model\_ptr)  
A function to check the values of various post-construction attributes.
- void [testElectricalLoadData\\_Model](#) ([Model](#) \*test\_model\_ptr)  
Function to check the values read into the [ElectricalLoad](#) component of the test [Model](#) object.
- void [testAddSolarResource\\_Model](#) ([Model](#) \*test\_model\_ptr, std::string path\_2\_solar\_resource\_data, int solar\_resource\_key)  
Function to test adding a solar resource and then check the values read into the [Resources](#) component of the test [Model](#) object.
- void [testAddTidalResource\\_Model](#) ([Model](#) \*test\_model\_ptr, std::string path\_2\_tidal\_resource\_data, int tidal\_resource\_key)  
Function to test adding a tidal resource and then check the values read into the [Resources](#) component of the test [Model](#) object.
- void [testAddWaveResource\\_Model](#) ([Model](#) \*test\_model\_ptr, std::string path\_2\_wave\_resource\_data, int wave\_resource\_key)  
Function to test adding a wave resource and then check the values read into the [Resources](#) component of the test [Model](#) object.
- void [testAddWindResource\\_Model](#) ([Model](#) \*test\_model\_ptr, std::string path\_2\_wind\_resource\_data, int wind\_resource\_key)

Function to test adding a wind resource and then check the values read into the [Resources](#) component of the test [Model](#) object.

- void [testAddHydroResource\\_Model](#) ([Model](#) \*test\_model\_ptr, std::string path\_2\_hydro\_resource\_data, int hydro\_resource\_key)

Function to test adding a hydro resource and then check the values read into the [Resources](#) component of the test [Model](#) object.

- void [testAddHydro\\_Model](#) ([Model](#) \*test\_model\_ptr, int hydro\_resource\_key)

Function to test adding a hydroelectric asset to the test [Model](#) object, and then spot check some post-add attributes.

- void [testAddDiesel\\_Model](#) ([Model](#) \*test\_model\_ptr)

Function to test adding a suite of diesel generators to the test [Model](#) object, and then spot check some post-add attributes.

- void [testAddSolar\\_Model](#) ([Model](#) \*test\_model\_ptr, int solar\_resource\_key)

Function to test adding a solar PV array to the test [Model](#) object and then spot check some post-add attributes.

- void [testAddSolar\\_productionOverride\\_Model](#) ([Model](#) \*test\_model\_ptr, std::string path\_2\_normalized\_↔ production\_time\_series)

Function to test adding a solar PV array to the test [Model](#) object using the production override feature, and then spot check some post-add attributes.

- void [testAddTidal\\_Model](#) ([Model](#) \*test\_model\_ptr, int tidal\_resource\_key)

Function to test adding a tidal turbine to the test [Model](#) object and then spot check some post-add attributes.

- void [testAddWave\\_Model](#) ([Model](#) \*test\_model\_ptr, int wave\_resource\_key)

Function to test adding a wave energy converter to the test [Model](#) object and then spot check some post-add attributes.

- void [testAddWind\\_Model](#) ([Model](#) \*test\_model\_ptr, int wind\_resource\_key)

Function to test adding a wind turbine to the test [Model](#) object and then spot check some post-add attributes.

- void [testAddLilon\\_Model](#) ([Model](#) \*test\_model\_ptr)

Function to test adding a lithium ion battery energy storage system to the test [Model](#) object and then spot check some post-add attributes.

- void [testLoadBalance\\_Model](#) ([Model](#) \*test\_model\_ptr)

Function to check that the post-run load data is as expected. That is, the added renewable, production, and storage assets are handled by the [Controller](#) as expected.

- void [testEconomics\\_Model](#) ([Model](#) \*test\_model\_ptr)

Function to check that the modelled economic metrics are > 0.

- void [testFuelConsumptionEmissions\\_Model](#) ([Model](#) \*test\_model\_ptr)

Function to check that the modelled fuel consumption and emissions are > 0.

- int [main](#) (int argc, char \*\*argv)

### 5.71.1 Detailed Description

Testing suite for [Model](#) class.

A suite of tests for the [Model](#) class.

### 5.71.2 Function Documentation

## 5.71.2.1 main()

### 5.71.2.2 testAddDiesel\_Model()

```

void testAddDiesel_Model (
    Model * test_model_ptr )

```

Function to test adding a suite of diesel generators to the test [Model](#) object, and then spot check some post-add attributes.

#### Parameters

<i>test_model_ptr</i>	A pointer to the test <a href="#">Model</a> object.
-----------------------	---

```

918 {
919     DieselInputs diesel_inputs;
920     diesel_inputs.combustion_inputs.production_inputs.capacity_kW = 100;
921     diesel_inputs.combustion_inputs.production_inputs.is_sunk = true;
922
923     test_model_ptr->addDiesel(diesel_inputs);
924
925     testFloatEquals (

```

```

926     test_model_ptr->combustion_ptr_vec.size(),
927     1,
928     __FILE__,
929     __LINE__
930 );
931
932 testFloatEquals (
933     test_model_ptr->combustion_ptr_vec[0]->type,
934     CombustionType :: DIESEL,
935     __FILE__,

Include dependency graph for test_Resources.cpp:
```

## Functions

- [Resources](#) \* [testConstruct\\_Resources](#) (void)  
A function to construct a [Resources](#) object and spot check some post-construction attributes.
- void [testAddSolarResource\\_Resources](#) ([Resources](#) \*test\_resources\_ptr, [ElectricalLoad](#) \*test\_electrical\_load\_ptr, std::string path\_2\_solar\_resource\_data, int solar\_resource\_key)  
Function to test adding a solar resource and then check the values read into the test [Resources](#) object.
- void [testBadAdd\\_Resources](#) ([Resources](#) \*test\_resources\_ptr, [ElectricalLoad](#) \*test\_electrical\_load\_ptr, std::string path\_2\_solar\_resource\_data, int solar\_resource\_key)  
Function to test that trying to add bad resource data is being handled as expected.
- void [testAddTidalResource\\_Resources](#) ([Resources](#) \*test\_resources\_ptr, [ElectricalLoad](#) \*test\_electrical\_load\_ptr, std::string path\_2\_tidal\_resource\_data, int tidal\_resource\_key)  
Function to test adding a tidal resource and then check the values read into the test [Resources](#) object.
- void [testAddWaveResource\\_Resources](#) ([Resources](#) \*test\_resources\_ptr, [ElectricalLoad](#) \*test\_electrical\_load\_ptr, std::string path\_2\_wave\_resource\_data, int wave\_resource\_key)  
Function to test adding a wave resource and then check the values read into the test [Resources](#) object.
- void [testAddWindResource\\_Resources](#) ([Resources](#) \*test\_resources\_ptr, [ElectricalLoad](#) \*test\_electrical\_load\_ptr, std::string path\_2\_wind\_resource\_data, int wind\_resource\_key)  
Function to test adding a wind resource and then check the values read into the test [Resources](#) object.
- void [testAddHydroResource\\_Resources](#) ([Resources](#) \*test\_resources\_ptr, [ElectricalLoad](#) \*test\_electrical\_load\_ptr, std::string path\_2\_hydro\_resource\_data, int hydro\_resource\_key)  
Function to test adding a hydro resource and then check the values read into the test [Resources](#) object.
- int [main](#) (int argc, char \*\*argv)

### 5.72.1 Detailed Description

Testing suite for [Resources](#) class.

A suite of tests for the [Resources](#) class.

### 5.72.2.2 testAddHydroResource\_Resources()

```

void testAddHydroResource_Resources (
    Resources * test_resources_ptr,
    ElectricalLoad * test_electrical_load_ptr,
    std::string path_2_hydro_resource_data,
    int hydro_resource_key )

```

Function to test adding a hydro resource and then check the values read into the test [Resources](#) object.

#### Parameters

<i>test_resources_ptr</i>	A pointer to the test <a href="#">Resources</a> object.
<i>test_electrical_load_ptr</i>	A pointer to the test <a href="#">ElectricalLoad</a> object.
<i>path_2_hydro_resource_data</i>	A path (either relative or absolute) to the hydro resource data.
<i>hydro_resource_key</i>	A key used to index into the <a href="#">Resources</a> component of the test <a href="#">Resources</a> object.

```

## 5.72.2.5 testAddWaveResource\_Resources()

```
void testAddWaveResource_Resources (
    Resources * test_resources_ptr,
    ElectricalLoad * test_electrical_load_ptr,
    std::string path_2_wave_resource_data,
    int wave_resource_key )
```

Function to test adding a wave resource and then check the values read into the test [Resources](#) object.

## Parameters

<i>test_resources_ptr</i>	A pointer to the test <a href="#">Resources</a> object.
<i>test_electrical_load_ptr</i>	A pointer to the test <a href="#">ElectricalLoad</a> object.
<i>path_2_wave_resource_data</i>	A path (either relative or absolute) to the wave resource data.
<i>wave_resource_key</i>	A key used to index into the <a href="#">Resources</a> component of the test <a href="#">Resources</a> object.

```

272         expectedErrorNotDetected(__FILE__, __LINE__);
273     }
274
275
276     try {
277         std::string path_2_solar_resource_data_BAD_LENGTH =
278             "data/test/resources/solar_GHI_peak-1kWm2_1yr_dt-1hr_BAD_LENGTH.csv";
279
280         test_resources_ptr->addResource(
281             RenewableType::SOLAR,
282             path_2_solar_resource_data_BAD_LENGTH,
283             -2,
284             test_electrical_load_ptr
285         );
286
287         error_flag = false;
288     } catch (...) {
289         // Task failed successfully! =P
290     }
291     if (not error_flag) {
292         expectedErrorNotDetected(__FILE__, __LINE__);
293     }
294
295     return;
```

```
296 } /* testBadAdd_Resources() */
```

### 5.72.2.8 testConstruct\_Resources()

```
Resources * testConstruct_Resources (
    void )
```

A function to construct a [Resources](#) object and spot check some post-construction attributes.

#### Returns

A pointer to a test [Resources](#) object.

```
64 {
65     Resources* test_resources_ptr = new Resources();
66
67     testFloatEquals(
68         test_resources_ptr->resource_map_1D.size(),
69         0,
70         __FILE__,
71         __LINE__
72     );
73
74     testFloatEquals(
75         test_resources_ptr->path_map_1D.size(),
76         0,
77         __FILE__,
78         __LINE__
79     );
80
81     testFloatEquals(
82         test_resources_ptr->resource_map_2D.size(),
83         0,
84         __FILE__,
85         __LINE__
86     );
87
88     testFloatEquals(
89         test_resources_ptr->path_map_2D.size(),
90         0,
91         __FILE__,
92         __LINE__
93     );
94
95     return test_resources_ptr;
96 } /* testConstruct_Resources() */
```

## 5.73 test/utills/testing\_utils.cpp File Reference

Implementation file for various PGMcpp testing utilities.

```
#include "testing_utils.h"
```

Include dependency graph for testing\_utils.cpp:

## Functions

- void `printGreen` (std::string input\_str)  
A function that sends green text to std::cout.
- void `printGold` (std::string input\_str)  
A function that sends gold text to std::cout.
- void `printRed` (std::string input\_str)  
A function that sends red text to std::cout.
- void `testFloatEquals` (double x, double y, std::string file, int line)  
Tests for the equality of two floating point numbers x and y (to within `FLOAT_TOLERANCE`).
- void `testGreaterThan` (double x, double y, std::string file, int line)  
Tests if  $x > y$ .
- void `testGreaterThanOrEqualTo` (double x, double y, std::string file, int line)  
Tests if  $x \geq y$ .
- void `testLessThan` (double x, double y, std::string file, int line)  
Tests if  $x < y$ .
- void `testLessThanOrEqualTo` (double x, double y, std::string file, int line)  
Tests if  $x \leq y$ .
- void `testTruth` (bool statement, std::string file, int line)  
Tests if the given statement is true.
- void `expectedErrorNotDetected` (std::string file, int line)  
A utility function to print out a meaningful error message whenever an expected error fails to be thrown/caught/detected.

### 5.73.1 Detailed Description

Implementation file for various PGMcpp testing utilities.

This is a library of utility functions used throughout the various test suites.

### 5.73.2 Function Documentation

#### 5.73.2.1 `expectedErrorNotDetected()`

```
void expectedErrorNotDetected (
    std::string file,
    int line )
```

A utility function to print out a meaningful error message whenever an expected error fails to be thrown/caught/detected.

#### Parameters

<i>file</i>	The file in which the test is applied (you should be able to just pass in " <code>__FILE__</code> ").
<i>line</i>	The line of the file in which the test is applied (you should be able to just pass in " <code>__LINE__</code> ").

```
457 {
458     std::string error_str = "\n ERROR   failed to throw expected error prior to line ";
459     error_str += std::to_string(line);
```

```
460     error_str += " of ";
461     error_str += file;
462
463     #ifdef _WIN32
464         std::cout << error_str << std::endl;
465     #endif
466
467     throw std::runtime_error(error_str);
468     return;
469 } /* expectedErrorNotDetected() */
```

### 5.73.2.2 printGold()

```
void printGold (
    std::string input_str )
```

A function that sends gold text to std::cout.

#### Parameters

<i>input_str</i>	The text of the string to be sent to std::cout.
------------------	---

```
109 {
110     std::cout << "\x1B[33m" << input_str << "\033[0m";
111     return;
112 } /* printGold() */
```

### 5.73.2.3 printGreen()

```
void printGreen (
    std::string input_str )
```

A function that sends green text to std::cout.

#### Parameters

<i>input_str</i>	The text of the string to be sent to std::cout.
------------------	---

```
89 {
90     std::cout << "\x1B[32m" << input_str << "\033[0m";
91     return;
92 } /* printGreen() */
```

### 5.73.2.4 printRed()

```
void printRed (
    std::string input_str )
```

A function that sends red text to std::cout.

## Parameters

<i>input_str</i>	The text of the string to be sent to <code>std::cout</code> .
------------------	---

```

129 {
130     std::cout << "\x1B[31m" << input_str << "\033[0m";
131     return;
132 } /* printRed() */

```

## 5.73.2.5 testFloatEquals()

```

void testFloatEquals (
    double x,
    double y,
    std::string file,
    int line )

```

Tests for the equality of two floating point numbers *x* and *y* (to within `FLOAT_TOLERANCE`).

## Parameters

<i>x</i>	The first of two numbers to test.
<i>y</i>	The second of two numbers to test.
<i>file</i>	The file in which the test is applied (you should be able to just pass in " <code>__FILE__</code> ").
<i>line</i>	The line of the file in which the test is applied (you should be able to just pass in " <code>__LINE__</code> ").

```

163 {
164     if (fabs(x - y) <= FLOAT_TOLERANCE) {
165         return;
166     }
167
168     std::string error_str = "ERROR: testFloatEquals():\t in ";
169     error_str += file;
170     error_str += "\tline ";
171     error_str += std::to_string(line);
172     error_str += ":\t\n";
173     error_str += std::to_string(x);
174     error_str += " and ";
175     error_str += std::to_string(y);
176     error_str += " are not equal to within +/- ";
177     error_str += std::to_string(FLOAT_TOLERANCE);
178     error_str += "\n";
179
180     #ifdef _WIN32
181         std::cout << error_str << std::endl;
182     #endif
183
184     throw std::runtime_error(error_str);
185     return;
186 } /* testFloatEquals() */

```

## 5.73.2.6 testGreaterThan()

```

void testGreaterThan (
    double x,
    double y,
    std::string file,
    int line )

```

Tests if  $x > y$ .

## Parameters

<i>x</i>	The first of two numbers to test.
<i>y</i>	The second of two numbers to test.
<i>file</i>	The file in which the test is applied (you should be able to just pass in "__FILE__").
<i>line</i>	The line of the file in which the test is applied (you should be able to just pass in "__LINE__").

```

216 {
217     if (x > y) {
218         return;
219     }
220
221     std::string error_str = "ERROR: testGreaterThan():\t in ";
222     error_str += file;
223     error_str += "\tline ";
224     error_str += std::to_string(line);
225     error_str += ":\t\n";
226     error_str += std::to_string(x);
227     error_str += " is not greater than ";
228     error_str += std::to_string(y);
229     error_str += "\n";
230
231     #ifdef _WIN32
232         std::cout << error_str << std::endl;
233     #endif
234
235     throw std::runtime_error(error_str);
236     return;
237 } /* testGreaterThan() */

```

## 5.73.2.7 testGreaterThanOrEqualTo()

```

void testGreaterThanOrEqualTo (
    double x,
    double y,
    std::string file,
    int line )

```

Tests if  $x \geq y$ .

## Parameters

<i>x</i>	The first of two numbers to test.
<i>y</i>	The second of two numbers to test.
<i>file</i>	The file in which the test is applied (you should be able to just pass in "__FILE__").
<i>line</i>	The line of the file in which the test is applied (you should be able to just pass in "__LINE__").

```

267 {
268     if (x >= y) {
269         return;
270     }
271
272     std::string error_str = "ERROR: testGreaterThanOrEqualTo():\t in ";
273     error_str += file;
274     error_str += "\tline ";
275     error_str += std::to_string(line);
276     error_str += ":\t\n";
277     error_str += std::to_string(x);
278     error_str += " is not greater than or equal to ";
279     error_str += std::to_string(y);
280     error_str += "\n";
281
282     #ifdef _WIN32
283         std::cout << error_str << std::endl;
284     #endif
285
286     throw std::runtime_error(error_str);

```

```

287     return;
288 } /* testGreaterThanOrEqualTo() */

```

### 5.73.2.8 testLessThan()

```

void testLessThan (
    double x,
    double y,
    std::string file,
    int line )

```

Tests if  $x < y$ .

#### Parameters

<i>x</i>	The first of two numbers to test.
<i>y</i>	The second of two numbers to test.
<i>file</i>	The file in which the test is applied (you should be able to just pass in "__FILE__").
<i>line</i>	The line of the file in which the test is applied (you should be able to just pass in "__LINE__").

```

318 {
319     if (x < y) {
320         return;
321     }
322
323     std::string error_str = "ERROR: testLessThan():\t in ";
324     error_str += file;
325     error_str += "\tline ";
326     error_str += std::to_string(line);
327     error_str += ":\t\n";
328     error_str += std::to_string(x);
329     error_str += " is not less than ";
330     error_str += std::to_string(y);
331     error_str += "\n";
332
333     #ifdef _WIN32
334         std::cout << error_str << std::endl;
335     #endif
336
337     throw std::runtime_error(error_str);
338     return;
339 } /* testLessThan() */

```

### 5.73.2.9 testLessThanOrEqualTo()

```

void testLessThanOrEqualTo (
    double x,
    double y,
    std::string file,
    int line )

```

Tests if  $x \leq y$ .

#### Parameters

<i>x</i>	The first of two numbers to test.
<i>y</i>	The second of two numbers to test.
<i>file</i>	The file in which the test is applied (you should be able to just pass in "__FILE__").
<i>line</i>	The line of the file in which the test is applied (you should be able to just pass in "__LINE__").

```

369 {
370     if (x <= y) {
371         return;
372     }
373
374     std::string error_str = "ERROR: testLessThanOrEqualTo():\t in ";
375     error_str += file;
376     error_str += "\tline ";
377     error_str += std::to_string(line);
378     error_str += ":\t\n";
379     error_str += std::to_string(x);
380     error_str += " is not less than or equal to ";
381     error_str += std::to_string(y);
382     error_str += "\n";
383
384     #ifdef _WIN32
385         std::cout << error_str << std::endl;
386     #endif
387
388     throw std::runtime_error(error_str);
389     return;
390 } /* testLessThanOrEqualTo() */

```

### 5.73.2.10 testTruth()

```

void testTruth (
    bool statement,
    std::string file,
    int line )

```

Tests if the given statement is true.

#### Parameters

<i>statement</i>	The statement whose truth is to be tested ("1 == 0", for example).
<i>file</i>	The file in which the test is applied (you should be able to just pass in "__FILE__").
<i>line</i>	The line of the file in which the test is applied (you should be able to just pass in "__LINE__").

```

417 {
418     if (statement) {
419         return;
420     }
421
422     std::string error_str = "ERROR: testTruth():\t in ";
423     error_str += file;
424     error_str += "\tline ";
425     error_str += std::to_string(line);
426     error_str += ":\t\n";
427     error_str += "Given statement is not true";
428
429     #ifdef _WIN32
430         std::cout << error_str << std::endl;
431     #endif
432
433     throw std::runtime_error(error_str);
434     return;
435 } /* testTruth() */

```

### 5.74.1 Detailed Description

Header file for various PGMcpp testing utilities.

This is a library of utility functions used throughout the various test suites.

## 5.74.2 Macro Definition Documentation

### 5.74.2.1 FLOAT\_TOLERANCE

```
#define FLOAT_TOLERANCE 1e-6
```

A tolerance for application to floating point equality tests.

## 5.74.3 Function Documentation

### 5.74.3.1 expectedErrorNotDetected()

```
void expectedErrorNotDetected (
    std::string file,
    int line )
```

A utility function to print out a meaningful error message whenever an expected error fails to be thrown/caught/detected.

#### Parameters

<i>file</i>	The file in which the test is applied (you should be able to just pass in "__FILE__").
<i>line</i>	The line of the file in which the test is applied (you should be able to just pass in "__LINE__").

```
457 {
458     std::string error_str = "\n ERROR   failed to throw expected error prior to line ";
459     error_str += std::to_string(line);
460     error_str += " of ";
461     error_str += file;
462
463     #ifdef _WIN32
464         std::cout << error_str << std::endl;
465     #endif
466
467     throw std::runtime_error(error_str);
468     return;
469 } /* expectedErrorNotDetected() */
```

### 5.74.3.2 printGold()

```
void printGold (
    std::string input_str )
```

A function that sends gold text to std::cout.

#### Parameters

<i>input_str</i>	The text of the string to be sent to std::cout.
------------------	---

```

109 {
110     std::cout << "\x1B[33m" << input_str << "\033[0m";
111     return;
112 } /* printGold() */

```

### 5.74.3.3 printGreen()

```

void printGreen (
    std::string input_str )

```

A function that sends green text to std::cout.

#### Parameters

<i>input_str</i>	The text of the string to be sent to std::cout.
------------------	---

```

89 {
90     std::cout << "\x1B[32m" << input_str << "\033[0m";
91     return;
92 } /* printGreen() */

```

### 5.74.3.4 printRed()

```

void printRed (
    std::string input_str )

```

A function that sends red text to std::cout.

#### Parameters

<i>input_str</i>	The text of the string to be sent to std::cout.
------------------	---

```

129 {
130     std::cout << "\x1B[31m" << input_str << "\033[0m";
131     return;
132 } /* printRed() */

```

### 5.74.3.5 testFloatEquals()

```

void testFloatEquals (
    double x,
    double y,
    std::string file,
    int line )

```

Tests for the equality of two floating point numbers *x* and *y* (to within FLOAT\_TOLERANCE).

#### Parameters

<i>x</i>	The first of two numbers to test.
----------	-----------------------------------

## Parameters

<i>y</i>	The second of two numbers to test.
<i>file</i>	The file in which the test is applied (you should be able to just pass in "__FILE__").
<i>line</i>	The line of the file in which the test is applied (you should be able to just pass in "__LINE__").

```

163 {
164     if (fabs(x - y) <= FLOAT_TOLERANCE) {
165         return;
166     }
167
168     std::string error_str = "ERROR: testFloatEquals():\t in ";
169     error_str += file;
170     error_str += "\tline ";
171     error_str += std::to_string(line);
172     error_str += ":\t\n";
173     error_str += std::to_string(x);
174     error_str += " and ";
175     error_str += std::to_string(y);
176     error_str += " are not equal to within +/- ";
177     error_str += std::to_string(FLOAT_TOLERANCE);
178     error_str += "\n";
179
180     #ifdef _WIN32
181         std::cout << error_str << std::endl;
182     #endif
183
184     throw std::runtime_error(error_str);
185     return;
186 } /* testFloatEquals() */

```

## 5.74.3.6 testGreaterThan()

```

void testGreaterThan (
    double x,
    double y,
    std::string file,
    int line )

```

Tests if  $x > y$ .

## Parameters

<i>x</i>	The first of two numbers to test.
<i>y</i>	The second of two numbers to test.
<i>file</i>	The file in which the test is applied (you should be able to just pass in "__FILE__").
<i>line</i>	The line of the file in which the test is applied (you should be able to just pass in "__LINE__").

```

216 {
217     if (x > y) {
218         return;
219     }
220
221     std::string error_str = "ERROR: testGreaterThan():\t in ";
222     error_str += file;
223     error_str += "\tline ";
224     error_str += std::to_string(line);
225     error_str += ":\t\n";
226     error_str += std::to_string(x);
227     error_str += " is not greater than ";
228     error_str += std::to_string(y);
229     error_str += "\n";
230
231     #ifdef _WIN32
232         std::cout << error_str << std::endl;
233     #endif
234

```

```

235     throw std::runtime_error(error_str);
236     return;
237 } /* testGreaterThan() */

```

### 5.74.3.7 testGreaterThanOrEqualTo()

```

void testGreaterThanOrEqualTo (
    double x,
    double y,
    std::string file,
    int line )

```

Tests if  $x \geq y$ .

#### Parameters

<i>x</i>	The first of two numbers to test.
<i>y</i>	The second of two numbers to test.
<i>file</i>	The file in which the test is applied (you should be able to just pass in "__FILE__").
<i>line</i>	The line of the file in which the test is applied (you should be able to just pass in "__LINE__").

```

267 {
268     if (x >= y) {
269         return;
270     }
271
272     std::string error_str = "ERROR: testGreaterThanOrEqualTo():\t in ";
273     error_str += file;
274     error_str += "\tline ";
275     error_str += std::to_string(line);
276     error_str += ":\t\n";
277     error_str += std::to_string(x);
278     error_str += " is not greater than or equal to ";
279     error_str += std::to_string(y);
280     error_str += "\n";
281
282     #ifdef _WIN32
283         std::cout << error_str << std::endl;
284     #endif
285
286     throw std::runtime_error(error_str);
287     return;
288 } /* testGreaterThanOrEqualTo() */

```

### 5.74.3.8 testLessThan()

```

void testLessThan (
    double x,
    double y,
    std::string file,
    int line )

```

Tests if  $x < y$ .

#### Parameters

<i>x</i>	The first of two numbers to test.
<i>y</i>	The second of two numbers to test.
<i>file</i>	The file in which the test is applied (you should be able to just pass in "__FILE__").
<i>line</i>	The line of the file in which the test is applied (you should be able to just pass in "__LINE__").

```

318 {
319     if (x < y) {
320         return;
321     }
322
323     std::string error_str = "ERROR: testLessThan():\t in ";
324     error_str += file;
325     error_str += "\tline ";
326     error_str += std::to_string(line);
327     error_str += ":\t\n";
328     error_str += std::to_string(x);
329     error_str += " is not less than ";
330     error_str += std::to_string(y);
331     error_str += "\n";
332
333     #ifdef _WIN32
334         std::cout << error_str << std::endl;
335     #endif
336
337     throw std::runtime_error(error_str);
338     return;
339 } /* testLessThan() */

```

### 5.74.3.9 testLessThanOrEqualTo()

```

void testLessThanOrEqualTo (
    double x,
    double y,
    std::string file,
    int line )

```

Tests if  $x \leq y$ .

#### Parameters

<i>x</i>	The first of two numbers to test.
<i>y</i>	The second of two numbers to test.
<i>file</i>	The file in which the test is applied (you should be able to just pass in "__FILE__").
<i>line</i>	The line of the file in which the test is applied (you should be able to just pass in "__LINE__").

```

369 {
370     if (x <= y) {
371         return;
372     }
373
374     std::string error_str = "ERROR: testLessThanOrEqualTo():\t in ";
375     error_str += file;
376     error_str += "\tline ";
377     error_str += std::to_string(line);
378     error_str += ":\t\n";
379     error_str += std::to_string(x);
380     error_str += " is not less than or equal to ";
381     error_str += std::to_string(y);
382     error_str += "\n";
383
384     #ifdef _WIN32
385         std::cout << error_str << std::endl;
386     #endif
387
388     throw std::runtime_error(error_str);
389     return;
390 } /* testLessThanOrEqualTo() */

```

### 5.74.3.10 testTruth()

```

void testTruth (

```

```
bool statement,  
std::string file,  
int line )
```

Tests if the given statement is true.

#### Parameters

<i>statement</i>	The statement whose truth is to be tested ("1 == 0", for example).
<i>file</i>	The file in which the test is applied (you should be able to just pass in "__FILE__").
<i>line</i>	The line of the file in which the test is applied (you should be able to just pass in "__LINE__").

```
417 {  
418     if (statement) {  
419         return;  
420     }  
421  
422     std::string error_str = "ERROR: testTruth():\t in ";  
423     error_str += file;  
424     error_str += "\tline ";  
425     error_str += std::to_string(line);  
426     error_str += ":\t\n";  
427     error_str += "Given statement is not true";  
428  
429     #ifdef _WIN32  
430         std::cout << error_str << std::endl;  
431     #endif  
432  
433     throw std::runtime_error(error_str);  
434     return;  
435 } /* testTruth() */
```
